#### THE

### PREFACE.

URING the struggles of a great nation, for her fafety, or renown, conjunctures often arife, when the person, whose station does not admit of his giving advice, ought to offer his informations. The present [1782-1794-1801] feemed to be fuch a time. And the Compiler of the following sheets, having collected, for a greater work, various documents, with regard to the national refources, thought it his duty to make an humble tender to the public of that authentic intelligence, which, amidst the wailings of despondency, had brought conviction, and comfort, to his own mind.

Little have they studied the theory of man, or observed his familiar life, who have not remarked, that the individual finds the highest gratification, in deploring the felicities of the past, even amidst the pleasures of the present. Prompted thus by temper, he has, in every age, complained of its decline, and depopulation, while the world was the most populous, and its affairs the most prosperous.

The reader, who honours the following sheets with an attentive perusal, may probably find, that though we have advanced, by wide steps, during the last century, in the science of politics, we have still much to learn; but that the fummit can only be gained, by fubstituting accurate refearch, for delufive speculation, and by rejecting zeal of pa-

radox, for moderation of opinion.

A 2

Mankind

Mankind are now too enlightened to admit of confident affertion, in the place of fatisfactory proof, or plaufible novelty, for conclusive evidence. He, confequently, who proposes new modes of argument, must expect contradiction, and he, who draws novel conclusions from uncommon premises, ought to enable the reader to examine his reasonings; because it is just inquiry, which can alone establish the certainty of truth on the degradation of error. And little, therefore, is afferted, in the following sheets, without the citation of sufficient authorities, or the mention of authentic documents, which it is now proper to explain.

As early as the reign of James I. ingenuity exerted its powers to discover, through the thick cloud, which then enveloped an interesting subject, the value of our exports and of our imports; and thence, by an easy deduction, to find, whether we were gainers, or losers, by our traffic. Diligent inquirers looked into the entries at the customhouse, because they knew, that since a duty of five in the hundred was collected on the value of commodities, which were sent out and brought in, it would require no difficult calculation, to ascertain nearly the amount of both. And, during that reign, it was established as a rule, not only among merchants, but statesmen, to multiply the general value of the customs, inwards and outwards, by twenty, in order to find the true amount of the various articles, which formed the aggregate of our foreign trade.

Exceptionable as this mode was, it furnished, through several years of darkness, the only light, that our ancestors had to direct their inexperienced steps, notwithstanding the impatience of politicians, and even the efforts of ministers. It is difficult to induce the old to alter the modes of their wouth. When the committee of the privy council for trade, urged the commissioners of the customs, about the end of Charles Il.'s reign—"to enter the several commodities, which formed the exports and imports, to affix to each its usual

usual price, and to form a general total by calculating the value of the whole,"—the custom-house officers insisted,—"that, to comply with such directions, would require one half of the clerks of London."—And the theorists of those times continued to satisfy their curiosity, and to alarm the nation, on the side of her commercial jealously; since there existed no written evidence, by which their statements could be proved, or their declamations consuted.

It was to the liberality, no less than to the perseverance, of the House of Peers, that the public were at last indebted, in 1696, for the establishment of the Inspector-General of the Imports and Exports, and for the Custom-house Ledger, which contains the particulars, and value of both; and which forms, therefore, the most useful record, with regard to trade, that any country possesses.

From this authentic register, the parliament was yearly supplied with details, either for argument, or deliberation, and speculatists were surnished with extracts, for the exercise of their ingenuity, or the formation of their projects. And it is from this commercial register, that the value of cargoes exported, which will be so often mentioned in this work, was also taken.

But, as actual enjoyment feldom enfures continued fatisfaction, what had been demanded for a century, when it was regarded as unattainable, was ere long derided, as defective, when it was posselfed. And theorists, who pointed out the defects of an establishment, that could not be made perfect, found many believers, because men's pride is gratified, by seeing impersection in all things.

When the committee of Peers originally affixed the price, whereby each article of export and import should in suture be rated, they probably knew, that the successive sluctuation of demand, arising from the change of fashion, would necessarily raise the value of some articles, and sink the price of others; but, that the same sluctuation of taste, which, in one

age, occasioned an apparent error, would in the next re-establish the rule. Nor, did the Peers probably expect to ascertain the real value of the exports, or of imports, during the current year; as the prodigious extent of the calculation did not admit of a speedy deduction. But, they aimed, with -a laudable spirit, to establish a standard, whereby a just comparison might be made, between any two given periods of the past; and thereby to infer, whether our manufactures, and commerce, prospered, or declined, prior to the current year. This information the Ledger of the Inspector-General does certainly convey, with fufficient accuracy, for the uses of practice, or the speculations of theory. The official value of the exports, and imports, has always been supposed to be much under the real value: from recent experience, we are now able to state the true amount of both. The value of British manufactures, which were exported, was,

Official value. Real value.

In 1798 - £.19,672,503 — £.33,148,682

1799 - 24,084,213 — 38,942,498

1800 - 24,304,284 — 39,471,203. And

by contrasting, in the following work, the average exports of distant years, we are by this means enabled to trace the rise, the decline, or the progress of trassic, at different periods, even in every year. The Inspector-General, who established that Ledger, in 1696, was William Culliford; who was succeeded, by Dr. Charles Davenant, in 1703. Yet, half informed writers affert, that Davenant was the original Inspector-General of exports and imports, who formed those official values in 1697." See "a Survey of the Strength, and Opulence of Great Britain;" by the Rev. Dr. Clarke.

It is to the same age that we owe the establishment of The register-general of shipping. The original institution of this office arose from an indefinite clause in the commission of the customs, in 1701. Thus it continued incidental to

the appointment of the Custom-house commissioners, till "the act for the union with Scotland, requiring the then ships of Scots property to be registered, in this office, it was thought fit to give it a distinct establishment, and at the same time to extend the account, which was kept before, of all ships trading over sea, or coastways, in England, to the ships in Scotland \*."

The fame reasons, which had induced the traders to enter at the Custom-house, in respect to their merchandizes, rather too much, incited them, with regard to their vessels, to register the burden rather too low, because a tonnage duty, they knew, would be often required of them, at many ports: in the first operation, they were governed by their vanity; in the fecond, by their interest: and if the one furnishe an evidence too flattering, the other gives a tellimony too degrading. Thus have we, in the entries of the sh pping, at the Custom-house, all the certainty, that the entries of merchandize has been supposed to want. And, in the following work, the quantity of tonnage, rather than the number of ships, has been always stated, at different periods, with the value of cargoes, which they were supposed to transport, as being the most certain: when to the value of cargoes the tonnage is added, in the following pages, the reader is furnished with a supplemental proof to the useful notices, which each separately conveys.

Of the tonnage of veffels, which will so often occur, in the subsequent sheets, it must be always remembered, that they do not denote so many distinct ships, which performed so many single voyages: for, it frequently happens, that one vessel enters and clears at the Sustant house, several times in one year, as the colliers of Whitehaven and Newcastle: but, these repeated voyages were in this manner always made, and will constantly continue; so that, being always

<sup>\*</sup> Charles Godolphin's Memorial to the Treasury, Dec. 1717.

included in the annual tonnage, we are equally enabled to form a comparative estimate of the advance, or decline, of our navigation, at any two given epochs of the past. It is to be, moreover, remembered, that the British vessels enter at the Custom-house by the registered tons, and not by the measured burden of the ship, which is supposed to be formerly one-third name, so that the reader may in every year, through the following statements, calculate the tonnage at one-mird more, than the registered tonnage has given it, prior to the year 1786, when the new register-act commenced.

The office of inspector-general of imports and exports, for Scotland, was established only in 1755. And no diligence could procure authentic details of the Scots commerce, from any other fource of genuine information. The blank, which appears in the preceding period, as to the Scots traffic, sufficiently demonstrates, that imperfect evidence, with regard to an important subject, is preferable to none; as the glimmerings of the faintest dawn is more invigorating than the gloom of total oracity. Connected accounts of the shipping of Scotland cannot be given before 1759; because it is only from this year, that they have been regularly entered at the Custom-house, at least constantly kept. In respect to these, the same allowance must be made for repeated voyages, and the same augmentation for the real burden more than the registered tonnage. It is not pretended, that the before-mentioned Custom-house books convey the certainty of mathematical demonstration. It is sufficient, that they contain the best evidence, which the nature of the case admits.

The fuejest of population is so intimately connected, with every estimate of the strength of nations, that the compiler was induced to inquire into the populousness of England, at different periods, from the earliest times to the present. In this difficult discussion, men, at once candid, and able,

have

have spoken a language, often contradictory to each other, and sometimes inconsistent with their own premises.

The Lord Chief Justice Hale, and Gregory King, in the fevententh century, and Doctor Campbell and Doctor Price, in the present times, maintained opinions directly the reversa of each other, in respect to the question, Whether the people of this island have not gradually increased, during every age, or sometimes diminished, amid public convulsions, and private misery. The two first—the one a great master of the rules of evidence; and the other a skilful calculator, have agreed in maintaining the assimpative of that question. Doctor Campbell has laboured to shew, that the inhabitants of England diminished, in their numbers, under the misrule of seudal sovereigns. And Doctor Price has equally contended, that the people have decreased, since a happier government was introduced at the Revolution, and that they continue to decrease.

It is proposed to review, historically, the sentiments of each, with design rather to ascertain the authencity of their facts, than to establish, or overturn, their several systems. The candid inquirer may perhaps see cause for lamenting, in his progress, that the learned are sometimes too consident, and the unlettered always too credulous. And he will have an opportunity, as he advances, of listening to the sentiments of his ancestors, on various topics of legislation, and of observing the condition of different ranks of men, previous to the period, at which This Estimate properly begins.

This Estimate was first published, in 1782. The public approbation has called, successively, for several editions. It has been translated, meanwhile, into the French, the Russian, and other foreign languages. It has surnished comfort to the people, at home, from that year, to the present: and, during that

that long period, it has impressed upon the minds of other nations high ideas of the opulence, and power, of Great Britain. It also shewed to our writers, on political œconomy, an example of the great importance of collecting many documents, and of trusting more to the weight of facts, than to the efficacy of words. In search both of documents, and of facts, our minor œconomists have pillaged this ESTIMATE, without limitation; and with less acknow-

ledgment, than difregard.

I was the first, who disclosed to the public, that, in every war, there is a point of depression, to which the spring of trade may be thrust down, by the force of hostilities; and from which, it invariably rebounds with augmented force. This confoling discovery was impugned, at the commencement of the late war. I came out to maintain my principle; by infiffing that what had always happened would again happen. Experience has now decided the certainty of a comfortable truth for ever. At the epoch of that controverfy, the whole value of our exports was f. 20, 390, 180, in 1793: the official value of our whole exports, gradually, rose to f.43,152,019, in 1800. Yet, has this discovery been adopted, with great complacency, by a late writer, as his own. Mr. McArthur has in his Political Facts, p. 30, the following passage: "It is no less curious than interesting to observe, that in every war fince the Revolution (except the present and " the war of 1756) our exports, compared with an equal " number of years in the preceding peace, were always confiderably diminished; but that soon after the return of copeace the value of exports role beyond their former le-" vel." Mr. M'Arthur had under his eye my Estimate, p. 70, where it is faid:-" An attentive examination of the carco goes exported, will convince every candid mind, that, in " every war, there is a point of depression, in trade, as there " is in all things, beyond which it does not decline; and from which it gradually rifes beyond the extent of its 66 former " former greatness." But, theft is always dangerous! In order to conceal his purpose, he invalidates his own remark, and my discovery, by excepting the wars of 1756, and 1793. The former hostilities depressed the value of cargoes from £.12,509,112 to £.11,708,515; and the late war from f.24,905,200, in 1792, to f.20,390,180, in 1793. Such are the fairness, and accuracy, which the public may expect from such writers. Mr. McArthur has, however, done me great justice, in p. 22 of his Fasts: he inferts, in his text, my statement of the Post-office revenue. in 1764; and immediately subjoins, in his note, that as my statement, from the Post-office account, agrees with his, it must be correct!! From me, however, far be the thought of deducting from Mr. M'Arthur one iota, either of his profit, or his praife. May the laurel, which only grew ffunted on my brow, rife foon into fize upon his!!!

During the war of 1756, Dr. Brakenridge published degrading accounts of our population, which were transcribed into the foreign gazettes. His example was followed by Dr. Price, during the American war. Seeing fuch doctrines propagated, during two fuccessive wars, by eminent men, I thought I faw, in that coincidence, a fettled purpose to enfeeble the nation, at critical periods, in the eyes of foreigners. Dr. Price contended, with more confidence, than knowledge, that the population of England, and Wales, had declined, fince the Revolution, till it fcarcely amounted to 5,000,000 of fouls. I maintained, that our numbers had greatly increased, in that period; and that the population of England, and Wales, in 1793, was 8,447,200 fouls. The late enumeration has demonstrated, that there has been an increase, fince the Revolution, of 2,830,000 people; and that the number of fouls, in England, and Wales, during the year 1801, was more than 9,330,000. This enumeration, then, has buried the degrading doctrines of Dr. Price, in eyer-during discredit.

The question, now, is not, which of the disputants were right; but, which of them, on both those occasions, maintained the truth. Experience has, finally, decided those two national questions. Demonstration will for ever denounce those ill-timed philosophers, who, as they delight, in diffenting from public opinion, take a pleasure, in frightening

well-meaning people with groundless terrors.

I have prefumed to think, that it would be agreeable to the public to fee "The Natural and Political Observations" of Gregory King, Esq. which were first quoted, with praise, by Davenant, and have been often mentioned of late, without due acknowledgment. I have now annexed his curious work, from a fine copy in the British Museum. As the modest Gregory King is unknown to our biographers, I have prefixed to his Observations a few notices of his life. From me, he has amply merited this attention; as I have benefited from his labours. What Pope said of Roscommon may, with some variation, be fairly applied to that ingenious computer:——

To him moral arithmetick was known, And ev'ry statesman's merit, but his own.

# TABLE OF CONTENTS.

#### CHAP. I.

General Observations upon the Causes, physical and moral, which influence Population, in every Country.—
The Populousness, Commerce, and Power of England, prior to the Demise of Edward III.—The Number of People, 1377.—Resections.

Page 1-15.

#### CHAP. II.

The Population, in the principal Towns of England, during 1377.—Reflections.—The Populousness, and Commerce, Policy and Power, of England, from that Epoch to the Accession of Elizabeth.

Page 16-34.

#### CHAP. III.

The State of England, at the Accession of Elizabeth.—
Her Laws.—The Numbers of People, during her
Reign.—Her Strength.—The Policy, and Power, of
the two subsequent Reigns.—The State of England,
at the Restoration.—The Number of People, at the
Revolution.—Restlections.—Page 35—59.

#### CHAP. IV.

Opinions as to the Strength of Nations.—Reflections.—
The real Power of England, during King William's Reign.—The State of the Nation.—The Losses of her Trade from King William's Wars.—Her Commerce revives.—Complaints of Decline, amidst her Prosperity.—Reflections. - Page 60—81.

#### CHAP. V.

The War of Queen Anne.—The Strength of the Nation.—The Losses of Trade.—The Revival of Trade.—Complaints of its Decline.—The Laws of Queen Anne, for promoting the Commercial Interests of the Nation.—The Union.—Restlections.

Page 82-95.

#### CHAP. VI.

Foreign Disputes of George I.—The State of the Nation.—Observations.—The Progress of Commerce, and Shipping.—Complaints of a Decline of Trade.—Industry, and Traffic, encouraged.—Remarks.

Page 97-109.

#### CHAP. VII.

The State of the Nation, at the Accession of George II.

—Remarks thereon.—The Increase of Trade, and Shipping.—Complaints of their Decline.—Restlections.

—Our Strength when War began, in 1739.—Our Trade, and Shipping, during the War.—The Properity of both, at the Restoration of Peace.—Complaints of Decline.—Remarks. - Page 110—125.

#### CHAP. VIII.

A captious Peace produced a new War.—The Refources of Britain.—Trade prospers amidst Hostilities.—Its Amount at the Peace of 1763.—Remarks. - - Page 126—133.

#### CHAP. IX.

The Commercial Failures, in 1763.—Opinions thereon:

—The true State of the Nation.—Observations on
the

the Peace of 1763.—Various Laws for promoting domestic Improvements.—Satisfactory Proofs of our Commercial Prosperity, at the Epoch of the Colonial Revolt.—Yet, were our Trade, and Shipping, popularly, represented as much on the Decline.

Page 134-153.

#### CHAP. X.

The Colonial Revolt.—The State of the Nation.—Her Finances, Trade, and Shipping.—Her military Power.—The Losses of Trade, from the War.—The Revival of Trade on the Re-establishment of Peace.—Remarks thereon.—Financial Operations.—The Sinking Fund established.—Its salutary Policy.——Page 154—192.

### CHAP. XI.

The Controversy on the Populousness of Britain revived.—The Parties.—A Review of their Publications.—An Examination of the Argument—from Reasoning—from Fasts—from Experience.—The augmented Populousness of Ireland.—The Increase of People in Scotland.—The general Result—as to England; and, the contest decided, by the Enumeration.————Page 193—233.

Chap.

### Снар. XII.

A Review of the foregoing Documents proposed.—A supplemental Proof, from a Chronological Account of Commerce.—A Commentary thereon:—The successive Epochs, from 1660, to 1801.—The Tonnage of Shipping.—The Value of exported Cargoes.—The Balance of Trade.—The Nett Customs.—The Amount of the Coinage, in that long Period.—The Conclusion of this Review, which reflects a flattering Prospect of our future Prosperity.

Page 234—268.

# CHAP. XIII.

The Prosperity of Great Britain from 1783 to 1793.

—The Causes assigned.—The East India Trade.—
The Fisheries encouraged.—The New Navigation Act.—Foreign Treaties.—Manufactories promoted.

—Agriculture encouraged.—A thousand Laws for local Improvements.—Revenue Acts.—Financial Operations.—Their salutary Consequences.

Page 269-282.

#### CHAP. XIV.

The Strength of Great Britan in 1793.—From her Populousness.—From her Trade.—From the Numbers of b ber Shipping, and Sailors.—From the Magnitude of the Royal Navy.—From her Revenue.—The lofs, and augmentation, of her Trade.—The Bankruptcies of 1793.—The lapfe of the Bank of England.—Our vast Commerce.—The Improvement of the Country.

—The Corn Trade.—Finance Operations of the War.—The Peace.—The Consequences.—The Conclusion.

General Observations upon the Causes, physical and moral, which influence Population, in every Country.—The Populousness, Commerce, and Power, of England, prior to the Demise of Edward III.—The Number of People, 1377.—Reflections.

F the existing numbers of mankind, in successive ages of the world, various writers have given dissimilar accounts, because they did not always acknowledge the same facts, nor often adopt the same principles, in their most ingenious disquisitions.

The Lord Chief Justice Hale\* formerly, and Sit James Stuart +, and the Count de Busson, lately

<sup>\*</sup> In his Primitive Origination of Mankind Considered.

<sup>+</sup> In his Political Occoromy.

confidered men, as urged, like other animals, by natural inflincts; as directed, like them, by the fame motives of propagation; and as fublished afterwards, or destroyed, by similar means.

It is inftinct, then, which, according to those illustrious authors, is the cause of procreation; but it is food, that keeps population full, and accumulates numbers. The force of the first principle, we behold in the multitudes, whether of the fish of the sea, the sowls of the air, or the beasts of the field, which are yearly produced: we perceive, however, the essential consequence of the last, from the vast numbers, that annually perish for want.

Experience indeed evinces, to what an immense extent domestic animals may be multiplied, by providing abundance of food. In the same manner, mankind have been found to exist, and increase, in every condition, and in every age, according to the standard of their subsistence, and to the measure of their comferts.

Hence Mr. Hume justly concludes\*, that if we would bring to some determination the question concerning the populousness of ancient, and modern, times, it will be requisite to compare the domestic and political situations of the two periods, in order to judge of the sacts by their moral causes; because, if every thing else be equal, it seems reasonable to expect, that where there are the wisest

<sup>\*</sup> In his Effays, Vol. I. Effay xi. On the Populousness of Ancient Nations.

institutions, and the most happiness, there will also be the most people.

Let us run over the history of England, then, with a view to those reasonings and to this truth.

Settled probably about a thousand years before the birth of Christ, England was found, on the arrival of Cæsar, to contain a great multitude of people. But this observant author transmitted notices, with regard to the modes of life, which prevailed among those, whom he came to conquer, whence we may judge of their numbers, with greater certainty, than from the accuracy of his language, or the weight of his authority. And he submits to our judgment sufficient data, when he informs us, that the inhabitants of the inland country subsisted by feeding of slocks, while their neighbours along the shores of the ocean were maintained by the more productive labours of agriculture.

Having already arrived, some of the tribes in the second, and others of them in the third stage of society, in its progress to refinement, the Britons were soon taught the arts of manufacture, and the pursuits of commerce, by their civilizing conquerors. A people who annually employed eight hundred vessels to export the surplus produce of their husbandry, must have exerted great industry at home, and enjoyed sufficient plenty from it. Roman Britain, of consequence, must have become extremely populous, when compared with former times, during that long period, from the arrival of the Romans, 55 years before the birth of Christ,

to the abdication of their government, in 446 of our æra\*.

From this event, commenced a war of fix hundred years continuance, if we calculate the fettlement of the Saxons, the ravages of the Danes, and the conquest of the Normans. A course of hostilities, thus lengthened beyond example, and wasteful above description, changed completely the political condition of the people, by involving them in ages of wretchedness. It was to those causes owing, that the inhabitants became divided, at the epoch of *The Conquest*, into five several classes; the barons, the free tenants, the free soccagers, together with the villains, and the slaves, who formed the great body of the people †.

A consideration of the foregoing events, it probably was, with the wretched condition of every order of men, which induced the Lord Chief Justice Hale, and Mr. Gregory King, to agree in afferting ‡, "that the people of England, at the "arrival of the Normans, might be somewhat "above two million." And the notices of that most instructive record, the Domesday Book, seem to justify the conjectures of both, by exhibiting satisfactory proofs of a very scanty population, at

<sup>\*</sup> Mr. Whitaker's most excellent History of Manchester, vol. i. which gives the best account of the British and Roman-British period of our Annals.

<sup>† 1</sup>d.

<sup>‡</sup> Origination of Mankind; and Davenant's Works.

that memorable epoch, in the country, as well as in the towns \*.

The annals of England, from the epoch of the Conquest to the date of the Great Charter (from 1066 to 1215) are filled with revolutions in the government, and insurrections of the people; with domestic ravages, and foreign war; with frequent famines, and their attendant pestilence.

Doctor Campbel has enumerated † various circumstances to demonstrate the unhappiness of the nation, during those times, which were equally serocious and unsettled; and, by necessary consequence, to show the constant decline of their numbers.

Few revolutions, faid he, even when atchieved by the most wasteful conquerors, appear to have been attended with so sudden a revolution, both of property and of power, as that which William I. unhappily introduced into England. The constitution, from being limited, and free, became at once arbitrary and severe. While the ancient

<sup>\*</sup> In Mr. Whitaker's admirable History of Manchester, vol. ii. p. 345—354, there is a very curious table of the rates for most of the necessaries of life, both at home and abroad, in the seventh, eighth, tenth, and eleventh centuries; whereby it appears, that such necessaries were much dearer formerly than at present; and that most things were in those ages much dearer at home than abroad. It is apparent then, that though we are often imposed upon by the denominations of money, the great body of the people did not live so comfortably in those good old times.

<sup>+</sup> Political Survey, 2 vol. ch. iii.

nobility feemed to be annihilated, the Saxon people were affuredly reduced to villainage. And those revolts enfued fucceffively, which necessarily arise, when a gallant people are despised, at the same time that they are oppressed. The Conqueror, urged partly by revenge, perhaps more by policy, was provoked, by the infurredion of the northern counties, to prescribe remedies as severe as they were barbarous. He so effectually depopulated the extensive country from the Humber to the Tees. that it lay for years uncultivated, whereby multitudes perished for want. The pleasures of William too were as destructive to the people as his anger. In forming the New Forest, he laid waste an extent of thirty miles in Hampshire, without regarding the cries of villagers, or the sacredness of churches. And his gratitude to his supporters, though attended with less violence, produced, in the end, consequences still more fatal, with regard to the depopulation of England, than had resulted either from his refentment, or his sport. He distributed the whole kingdom to about feven hundred of his principal officers, who afterwards divided among their followers the spoils of the vanquished, on such precarious tenures, as fecured the fubmission of the lower orders, though not their happiness.

The Conqueror's measures, thus harshly executed, continued to influence all ranks of men, long after the terrors of his government had ceased; and while they neither secured the quiet, nor promoted

moted the plenty of the nation, his rigours probably added very few to its numbers.

The great charter of John made no alteration in public law, nor any innovation in private rights: and though it conferred additional fecurity on the free, it gave little freedom to the flave. Yet, the barbarous licence both of kings and nobles being thenceforth fomewhat reftrained, government, fays Mr. Hume\*, approached by degrees nearer to that end, for which it was inflituted, the equal protection of every order in the flate.

This general reasoning, however just, did not impose on the fagacity of Dr. Campbel, who minutely examined + every circumstance, in our fubsequent annals, that tended either to retard, or promote, an effective population. He found no event in the long reign of Henry III. filled as it was with diffraction, proceeding from weakness, and with civil war, the refult of turbulence, which could have added one man to our numbers. Though historians have celebrated the following reigns of our Edwards, as the most glorious in our annals; yet he remarked, that, during a period, wherein there were scarcely ten years of peace, the eclat of victories, the splendour of triumphs, or the acquisition of distant territories, did not compenfate the loss of inhabitants, who continually decreased, from the waste of foreign, and civil, wars,

<sup>\*</sup> In his History.

<sup>†</sup> In his Political Survey, 2 vol. ch. iii.

and from the debility of pestilential distempers, arising from a wretched husbandry, as much as from a noxious state of the atmosphere. It was a shrewd remark of Major Graunt\*, when he was reslecting over "the sickliness, the healthfulness, and." fruitfulness, of seasons," that "the more sickly the years are, the less fruitful of children they also be†."

The first notice, which the Parliament seem to have taken of the paucity of inhabitants, may be feen in the Statute of Labourers, that was enacted in 1349. This law recites—"That whereas a great part of the people, and especially of workmen and fervants, late died of the pestilence, many, seeing the necessity of masters and great scarcity of servants, will not ferve, unless they receive excessive wages, fome being rather willing to beg in idleness, than by labour to get their living." Considering therefore "the grievous incommodities which of the lack, especially of ploughmen and fuch labourers, may hereafter come," Edward III. with the affistance of the prelates, the nobles, and the learned men, ordained a variety of regulations, which were unjust in their theory, and violent in their execution 1. This edict of the King, and his council.

<sup>\*</sup> In his Observations on the Bills of Mortality, 1662.

<sup>†</sup> There were no fewer than one-and-twenty dearths and famines from 1069 to 1355. See a Collection of the most remarkable dearths and famines, published by Edward Howe, in 1631.

<sup>†</sup> These regulations may be seen in Cay's Collection of Statutes, vol. i. p. 261-3; and sufficiently prove to what a deplorable

council, was enforced by the legislature in the subfequent year—" on the petition of the commonalty,
that the said servants, having no regard to the said.
ordinance, but to their ease and singular covetise,
do withdraw to serve great men and other, unless
they have wages and living to the double and treble of
that they were wont to take the twentieth year of the
king that now is."

Yet, after adjusting minutely the prices of labour, of natural products, and even of manufactures, the statute of the 23d Edward III. directed, state the artificers should be sworn to use their crasts as they did in the twentieth year of the same king\*" (1346), under the penalty of imprisonment, at the discretion of the Justices. The Parliament busied themselves, year after year, in regulating labour, which had been destrauded of its

deplorable state of slavery the collective mass of the people was then reduced. "Every able-bodied person, under sixty years of age, not having sufficient to live on, being required, shall be bound to serve him that doth require him, or else shall be committed to gaol, till he finds security to serve. If a servant, or workman, depart from service before the time agreed upon, he shall be imprisoned. If any artisticer take more wages than were wont to be paid, he shall be committed to gaol." The severity of these penalties was soon greatly increased by the 34th Edward III. which directs, "That if any labourer or servant slee to any town, the chief officer shall deliver him up: and if they depart to another county, they shall be burnt in the forehead with the letter F." Thus, says Anderson, they lived, till manufactures drove slavery away.

Chron. Ac. of Com. v. i. p. 204.

<sup>\*</sup> Chap. 1-7.

just reward, by considerable defalcations from the coin\*. During an administration less active, and vigorous, and respected, than Edward's, such regulations had produced tumult and revolt. Scarcely indeed was that great monarch laid in his grave, when the confirmation of the same statutes, by his feeble fucceffor, gave rife to the memorable rebellion of Tyler and Straw, which was so destructive in its immediate effects, yet proved so beneficial in its ultimate consequences! The common people acquired implied liberty from infurrection, while the Parliament were enacting +, "that forced manumissions should be considered as void." And such are the revolutions, which infenfibly take place, during ages of darkness, before the eyes of chroniclers, who are carried away by the found of words, without regarding the efficacy of things.

The declamatory recitals of such statutes ought generally to be regarded as slight proofs of the authenticity of facts, unless where they are supported, by collateral circumstances. From the reiterated debasement of the coin, which proceeded from the expensive wars of Edward III. we might be apt to infer, that the recited destruction of the

Harris on Coins, part ii. ch. 1.

<sup>\*</sup> From the value of the pound, or twenty shillings in prefent money, as established by Edward I. in 1300, there were deducted by Edward III. in the 18th of his reign, 4s. 11 d.  $\frac{7}{4}$ , and in the 20th of his reign 9d.  $\frac{3}{4}$  more; so that there had been taken no less than sive shillings and nine-pence from the standard pound, as settled in 1300, of £:2. 17s. 5d.

<sup>+</sup> By the 5th Richard II.

pestilence was merely a pretence to palliate motives of avarice, or to justify the rigours of oppression.

On the other hand, Doctor Mead affures us. that the greatest mortality, which has happened in later ages, was about the middle of the fourteenth century; when the plague that feized England, Scotland; and Ireland, in 1349, is faid to have dispeopled the earth of more than half of its inhabitants\*. The Commons petitioned, during the Parliament + of 1364, that, in confideration of the preceding pestilence, the King would allow persons, who held lands of him in chief, to let leases without a licence, as had been lately practised, till the country were become more populous. From the 23d of Edward I. when the cities and boroughs are faid to have been first formally summoned to Parliament, to the demise of Edward IV. the sheriffs often returned, That there were no cities or boroughs in their counties, whence representatives could be sent. This form of expression Doctor Brady t has very justly explained to mean. That the towns were fo depopulated and poor, as to be unable to pay the accustomed expences of delegates. The truth of that representation, and of this commentary, feems to be confirmed by

<sup>\*</sup> Discourse concerning Pest. Contag. p. 24-5.

<sup>+</sup> Cott. Abt. of Records, p. 97.

<sup>1</sup> Of Boroughs, p. 125, &c.

a law of Henry VII.\*; which recites, That where, in fome towns, two hundred persons lived by their lawful labours, now they are occupied by two or three herdsmen, and the residue fall into idleness. And, from the foregoing facts we may surely inser, that there must have been a great paucity of people in England, during those good old times, at least towards the conclusion of the celebrated reign of Edward III.

\* 4th Henry VII. ch. 19; which is published in the Ap-

pendix to Pickering's Statutes, vol. xxiii.

<sup>†</sup> This record, so instructive as to the state of England at the demise of Edward III. was laid before the Antiquary Society, in December 1784, by Mr. Topham of the Paper-Office; a gentleman, whose curious research, with regard to the jurisprudence and history of his country, as well as communicative disposition, merits the greatest praise. Mr. Topham observed, that the sum collected, in consequence of the subsidy

When we have ascertained what proportion the persons paying bore to the whole, we shall be able to form a sufficient estimate of the total population. It appears from the table formed by Doctor Halley, according to the Breslaw births and burials; from the Northampton Table; from the Norwich Table; and from the London table, constructed by Mr. Simpson; as these Tables are published by Doctor Price\*; That the persons at any time living under source years of age are a good deal sewer than one-third of the co-existing lives. And the lay persons, who paid the tax in 1377, must consequently have been a good deal more than two-thirds of the whole:

But, fince there may have been omif-

fions of the persons paying - 1,367,239 Add a half - - - 683,619

<sup>\*</sup> From Davenant's Table (in his Essay on Ways and Means, p. 76.) it appears, that Wales paid a much smaller fum to the poll-tax of the 1st of William and Mary, to the quarterly poll, and indeed to every other tax, and contained a much lower number of houses, according to the hearth-books of Lady-day 1600, than Yorkshire. It was giving a very large allowance to Wales, when this country was placed on an equality with Yorkshire, which paid, in 1377, for 131,040 lay persons: The population of Cheshire and Durham was settled upon fimilar principles; and is equally flated in the text at a medium rather too high. So that, as far as we can credit this authentic record, in respect to the whole number of lay persons upwards of fourteen years of age, we must believe, that this kingdom contained at the demise of Edward III. about TWO MILLIONS, three hundred and fifty-three thousand souls making a reasonable allowance for the usual omissions of taxable persons. We

We can now build upon a rock; having before us proofs, which are almost equal in certainty to actual enumerations. Yet, what a picture of public misrule, and private mifery, does the foregoing statement display, during an unhappy period of three hundred years! We here behold the powerful operation of those causes of depopulation, which Doctor Campbel collected, in order to support his hypothesis of a decreasing population, in feudal times. But, were we to admit, that one-half of the people had been carried off by the desolating plague of 1349, as Doctor Mead supposes; or even onethird, as Mr. Hume represents with greater probability; we should find abundant reason to admire the folidity of Lord Hale's argument, in favour of a progressive population; because this circumstance would alone evince, that there had been, in that long effluxion of time, a confiderable increase of numbers, during various years of healthiness, and in different ages of tranquillity.

#### CHAP. II.

The Population in the principal Towns of England; during 1377. — Reflections. — The Populousness; Commerce, Policy, and Power of England—from that Epoch to the Accession of Elizabeth.

HE truth of Lord Hale's conclusion, with regard to a progressive increase of people, would appear still more evident, if we were to form a comparison between the notices of Domesday book and the statements of the Subsidy-roll before-mentioned, which would show a much inferior populousness, soon after the Conquest, in 1077, than at the demise of Edward, in 1377. We shall certainly find additional proofs, and perhaps some amusement, from taking a view of the population of our principal towns, as they were found, and are represented by the tax-gatherers, in 1377.

London paid for 23;314 lay persons; and contained confequently about 34,971 fouls. York for 7,248 10,872 Briftol for 6,345 9,517 Plymouth for 4,837 7,255 Coventry for 4,817 7,225 Norwich

The foregoing are the only towns, which, in 1377, paid the poll-tax of a groat for more than two thousand lay persons, of sourteen years of age and upwards. And their inconsiderableness exhibits a marvellous depopulation in the country, and a lamentable want of manusactures, and of commerce, every where, in England. The state of Scotland was still more wretched with regard to all these. Domesday Book represents our cities to have been little superior to villages, at the Conquest; and

<sup>\*</sup> Dr. Price talked of Norwich having been a great city fermerly. The Domesday Book shews sufficiently the diminutiveness of our towns in 1077: and Mr. Topham's Subsidy Roll puts an end to conjecture with regard to the populousness of any of them anterior to 1377.

<sup>+</sup> See Brady on Boroughs.

much more inconfiderable than they certainly were, at the demife of Edward III.

The informations of contemporary writers would, nevertheless, lead us to consider those early reions as times of overflowing populousness. Amidst all that depopulation, Edward III. is faid to have fuddenly collected, in 1360, a hundred thousand men, whom he transported in eleven hundred vessels to France \*. It did not, however, escape the fagacity of Mr. Hume, when he reflected on the high pay of the foldiers, that the numerous armies, which are mentioned by the historians of those days, confifted chiefly of raggamuffins, who followed the camp for plunder. In 1382, the rebels, fays Daniel +, fuddenly marched towards London, under Wat. Tyler, and Jack Straw, and mustered on Blackheath fixty thousand strong, or, as others fay, an hundred thousand. In 1415, Henry V. invaded France with a fleet of fixteen hundred fail t, and fifty thousand combatants, who not long after won the glorious battle of Azincourt. Our hiftory is filled with fuch instances of vast armies, which had been haftily levied for temporary enterprizes: yet, we ought not thence to infer, that the country was overstocked with inhabitants. This truth is extremely apparent from the statute of the 9th Henry V. which recites, "That whereas, at the

most

making of the act of the 14th of Edward III. "(1340) there were fufficient of proper men " in each county to execute every office; but that, "owing to peftilence and wars, there are not now "(1421) a sufficiency of responsible persons to " act as sheriffs, coroners, and escheators." The laurels, which were gained by Henry V. are well known, fays the learned observer on the ancient statutes; but he hath left us, in the preamble of one of his statutes, most irrefragable proof, that they were not obtained, but at the dearest price, the depopulation of the country.

The facility, with which great bodies of men were collected, in those early ages, exhibits, then, for our instruction, a picture of manners, idle and licentious; and shews only, for our comfort, that the most numerous classes of mankind existed in a condition, which is not to be envied by those, who, in better times, enjoy either health, or ease.

The period from the accession of Henry IV. in 1399, to the proclamation of Henry VII. in 1485, may be regarded as the most disastrous in our latter annals; because, a civil war, remarkable for the inveteracy of the leaders, and for the wafte of the people, began with the one event, and ended with the other. Doctor Campbel has collected the varicus circumstances of depopulation; tending to prove, that the number of inhabitants, which, before the bloody contests between the Lancastrians and Yorkists began, had been already much leffened, was in the end greatly reduced, by a feries of the C 2

most destructive calamities. The monuments of more settled times were demolished; the country was laid waste; cities sunk into towns, while towns dwindled into villages: and universal desolation is said to have ensued. Nor, was the condition of the country much meliorated, by the reestablishment of domestic quiet. If, indeed, we could implicitly credit the recitals of the laws of Henry VII. we should find sufficient evidence, "That great desolations daily do increase, by pull-"ing down and wilful waste of houses and towns, and by laying to pasture lands which customably have been used in tillage."

An important change had certainly taken place mean while, in the condition of the great body of the people, which fortunately promoted their happiness, and which consequently proved favourable to the propagation of the species.

There existed in England, at the Conquest, no free hands, or freemen, who worked for wages; since the scanty labour of times, warlike and unindustrious, was wholly performed by villains, or by slaves. The latter, who composed a very numerous class, equally formed an object of foreign trade, for ages after the arrival of the Conqueror, who only prohibited the sale of them to insidels. But the slaves had happily departed from the land before the reign of Henry III. This we may infer from the law declaring, in 1225, "How men

<sup>\*</sup> Dr. Henry's History of Great Britain, vol. ii. p. 479-80.

mentions villains, freemen, (though probably not in the modern fense), merchants, barons, earls, and men of the church. Another order of men is alluded to rather than mentioned, during the same session; whom we shall find, in after times, rising to great importance, from their numbers and opulence. And a woollen manusacture, having already increased to that stage of it when frauds begin, was regulated by the act; which required, "There shall be but one measure throughout the "realm."

Yet, this manufacture continued inconfiderable, during the warlike reign of Edward I. and the turbulent administration of his immediate succeffor, if we may judge from the vast exportations of wool.

The year 1331 marks the first arrival of Walloon manufacturers, when Edward III. wifely determined to invite foreigners into England ‡, to instruct his subjects in the useful arts. As early as the Parliament of 1337, it was enacted, That no wool should be exported; that no one should wear any but English cloth; that no clothes made beyond seas should be imported; that foreign clothworkers might come into the king's dominions, and should have such franchises as might

<sup>\* 9</sup> Henry III. ch. 14.

<sup>+ 9</sup> Henry III. ch. 25.

<sup>1</sup> And. Chron. Ac. of Com. v. i. p. 162.

fuffice them. This may be confidered as one of the first statutes, which gave commercial efficacy to the mercantile system.

Before this time, fays De Wit\*, when the tumults of the manufacturers in Flanders obliged them to feek shelter in other countries, the English were little more than shepherds and wool-sellers. From this epoch, manufactures became often the objects of legislation, and the spirit of industry will be found to have promoted greatly the state of population, and to have augmented considerably the opulence of all ranks of men.

The statutes of labourers of 1349 and 1350 demonstrate, that a considerable change had taken place in the condition and pursuits of the most numerous classes. During several reigns after the Conquest, men laboured, because they were slaves. For some years before these regulations of the price of work, men were engaged to labour, from a sense of their own freedom, and of their own wants. It was the statutes of labourers †, which, adding the compulsion of law to the calls of necessity, created oppression for ages, while they ought to have given relief. It is extremely difficult to ascertain the time when villainage ceased in Eng-

<sup>\*</sup> Interest of Holland.

<sup>+</sup> See the 12th Richard II. ch. 3, 4, 5, 6, 9. By these, no artificer, labourer, servant, or victualler, shall depart from one hundred to another, without licence under the kings seal. These laws, says Anderson, are sufficient proofs of the slavish condition of the common servants in those times (1388).

land, or even to trace its decline. The Edwards, during the pressure of their foreign conquests, certainly manumitted many of their villains for money. Owing to the previous fewness of inhabitants, the numerous armies, which for almost a century defolated the nation amidst our civil wars, must have been necessarily composed of the lower ranks: and we may reasonably suppose, that the men, who had been brought from the drudgeries of flavery to contend as foldiers, for the honour of nobles and the rights of kings, would not readily relinquish the honourable sword for the meaner ploughshare. The church, even in the darkest ages, laudably remonstrated against the unchristian practice of holding fellow-men in bondage. The courts of justice did not willingly enforce the master's claim to the servitude of his villains, till, in the progress of knowledge, interest discovered, that the purchased labour of freemen was more productive than the liftless and ignoble toil of flaves. Owing to those causes, there were certainly few villains in England at the accession of Henry VII.\*; and the great body of the people, having thus gained greater freedom, and with it greater comfort, henceforth acquired the nume-

<sup>\*</sup> The flatute of 23 Henry VI. chap. 12. mentions only fervants, artificers, workmen, and labourers; and there is a distinction made between husbandry fervants and domestic fervants. Yet villains are spoken of, even in our courts of justice, though seldom, as late as the time of James I.

rous bleffings, which every where refult from an orderly administration of established government.

Duting almost a century, before the accession of Henry VII. in 1485, the manufacturers of wool, with their attendant artificers, had fixed the feats of their industry in every county in England. The principle of the act of navigation had been introduced into our legislation as early as 1381, by the law declaring\*, "That none of the king's " fubjects shall carry forth, or bring in merchan-"dizes, but only in ships of the king's allegiance." The fisheries too had been encouraged to Agriculture had been moreover promoted, by the law which declared ‡, "That all the king's fubjects "may carry corn out of the realm when they " will." And guilds, fraternities, and other companies, having foon after their creation imposed monopolizing restraints, were corrected by a law of Henry VI. §; though our legislators were not very steady, during an unenlightened age, in the application of fo wife a policy.

In reading the laws of Edward IV. we think ourselves in modern times, when the spirit of the mercantile system was in its full vigour, before it had been so perspicuously explained and so ably

<sup>\* 5</sup> Richard II. ch. 3,-6 Richard, ch. 8.

<sup>#</sup> By 6 Richard II. ch. 11, 12.

<sup>§ 15</sup> Hen. VI. ch. 6.

exploded\*. It is however in the laws t of Richard III. that we see more clearly the commercial state of England, during the long period, wherein the English people were unhappily too much engaged in king-making. In those inauspicious times was the trade of England chiefly carried on by Italians, at least by merchants from the shores of the Mediterranean. The manufacturers were composed mostly of Flemings, who, under the encouragement of Edward III. had fled from the diffracrions of the Netherlands, for repose and employment in England. And, the preamble of one of Richard's laws t, will furnish a convincing proof that their numbers had given great discontent to the English people: "Moreover, a great number " of artificers and other strangers, not born under " the king's obeifance, do daily refort to London, "and to other cities, boroughs, and towns, and " much more than they were wont to do in times " past, and inhabit by themselves in this realm, "with their wives, children, and household; and will not take upon them any laborious occupa-" tion, as going to plough and cart, and other like " business, but use the making of cloth, and other " handicrafts and eafy occupations; and bring from

<sup>\*</sup> By Dr. Smith's Essay on the Wealth of Nations,

<sup>† 1</sup> Richard III. ch. 6, 8, 9, 11, 12, 13.

<sup>† 1</sup> Richard III. ch. 9. But Henry VII. upon the supplication of the Italian merchants, repealed the greater part of this law, which imposed restraints on aliens; yet retained the forfeitures incurred, in the true spirit of his avaricious government.

"the parts beyond the fea great substance of wares and merchandizes to fairs and markets, and other places, at their pleasure, to the impoverishment of the king's subjects; and will only take into their fervice people born in their own countries; whereby the king's subjects, for lack of occupation, fall into idleness and vicious living, to the great perturbance of the realm."—All this was directed otherwise by Henry VII. though probably without much success, "upon the petition made of the Commons of England." In the present times, it is perhaps the wifest policy, neither to encourage foreigners to come, nor to drive them away.

When manufacturers have been thoroughly fettled, nothing more is wanting to promote the wealth and populousness of a country from their labour, than the protection of their property and freedom; by the impartial administration of justice; while their frauds are repressed, and their combinations prevented, by doing equal right to every order in the state.

The policy of Henry VII. has been praised by historians fully equal to its worth. Anderson relates \*, that this prince, "finding the woollen ma-"nufactures declining, drew over some of the best "Netherland clothmakers, as Edward III. had "done 150 years before." This is probably said without authority; since the law of the preceding reign, concurring with the temper of the times, did

<sup>\*</sup> Chron. Acc. of Com. v. i. p. 306.

not permit the easy execution of so unpopular a measure. Henry VII. like his two immediate predecessors, turned the attention of the Parliament to agriculture and manufacture, to commerce and navigation, because he sound the current of the national spirit already running toward all these salutary objects: hence, says Lord Bacon\*, it was no hard matter to dispose and affect the Parliament in this business. And the legislature enacted a variety of laws, which that illustrious historian explains, with his usual perspicuity; all tending, says he, in their wise policy, towards the population apparently, and the military forces of the realm certainly.

That monarch's measures for breaking the oppressive power of the nobles; for facilitating the alienation of lands; for keeping within reasonable bounds the bye-laws of corporations; and, above all, for suppressing the numerous bodies of men, who were then retained in the service of the great; all these deserve the highest commendation, because they were attended with effects, as lasting as they were efficacious.

It may be however doubted, whether his piddling husbandry of petty farms, which has been oftentatiously praised by Doctor Price, can produce a sufficiency of food for a manufacturing country, or even prevent the too frequent returns

<sup>\*</sup> History of Henry VII.

<sup>+</sup> History in Kennet, v. i. p. 504-7.

of famine. Agriculture must be practised as a trade, before it can supply superabundance. Certain it is \*, that till the reign of Henry VIII. we had in England no carrots, turnips, cabbages, nor sallads; and sew of the fruits, which at present ornament our gardens, and exhibitante our tables.

The spirit of improvement, however, which had taken deep root, before the accession of Henry VIII. continued to fend forth vigorous shoots, during his reign. This we might infer from the frequent proclamations against the practice of inclosing, which was faid to create a decay of bufbandry. On the other hand, a statute was enacted to enforce the fowing of flax-feed and hemp. The nation is represented to have been over-run by foreign manufacturers, whose superior diligence and œconomy occasioned popular tumults. While the kingdom was gradually filling with people, it was the yearly practice to grant money to repair towns, which were supposed to be falling into ruins. Yet, the numerous laws, that were enacted by the Parliaments of Henry VIII. for the paving of streets, in various cities and villages, prove how much industry had gained ground of idleness; how much opulence began to prevail over penury; and how far a desire of comfort had succeeded to the langours of floth. Thus much might indeed be difcovered, from the numerous laws, which were, during this period, passed, for giving a monopoly of

<sup>\*</sup> And. Chron. Com. v. i, p. 338.

manufacture to different towns; and which prove, that a great activity prevailed, by the frequent defire of felfish enjoyment, contrary to the real interest of the tradesmen themselves.

The statute, however, which limited the interest of money to 10 per cent. demonstrates, that much ready money had not yet been brought into the coffers of lenders; while a great number of borrowers defired to augment their wealth, by employing the money of others in the operations of trade. The kings of England, both before and after this epoch, borrowed large fums in Genoa, and the Netherlands. A parliamentary debate of the year 1523 exhibits a lively picture of the opinions, that were at this time entertained, as to circulation, which, in modern times, has fo great an effect on the strength of nations. A supply of eight hundred thousand pounds being asked by Cardinal Wolfey for the French war, Sir Thomas More, the Speaker of the Commons, endeavoured to convince the House, That it was not much, on this occasion, to pay four shillings in the pound. But to this the Commons objected, That though true it was fome perfons were well monied, yet, in general, the fifth part of mens' goods was not in plate or money, but in stock or cattle; and that to pay away all their coin would alter the whole intercourse of things, and there would be a stop in all traffick; and confequently the shipping of the kingdom would decay. To this grave objection, it was however gravely answered, That the money

money ought not to be accounted as lost, or taken away, but only as transferred into other hands of their kindred or nation; so that no more was about to be done than we see ordinarily in markets, where, though the money change masters, yet every one is accommodated. Nor need you fear this scarceness of money; the intercourse of things being so established throughout the world, that there is a perpetual circulation of all that can be necessary to mankind. Thus your commodities will ever find out money; while our own merchants will be as glad of your corn and cattle, as you can be of any thing they can bring you\*.

Such is the argument of Sir Thomas More; who has thus left a proof to posterity of how much he knew, with regard to modern ecconomy, without the aid of modern experience. No one at present can more clearly explain the marvellous accommodation of money, when quickly passed from hand to hand, or the great facility in raising public supplies, when every one can easily convert his property, either fixed or moveable, into the metals, which are the commodious measure of all things. And this is circulation, of which we shall hear so much in later times; and which creates so momentous a strength, when it exists in sull vigour; yet leaves, when it disappears, so great a debility.

<sup>†</sup> Lord Herbert's History of Henry VIII. in Kennet, v. ii. p. 55.

But the suppression of monasteries, and the reformation of religion, are the measures of Henry VIII.'s reign, which were attended with consequences the most happy and the most lasting. Fifty thousand persons are said to have been maintained in the convents of England and Wales, who were thus forced into the active employments of life. And a hundred and sifty thousand persons are equally supposed to have been restrained from marriage\*, which can alone produce effective population.

While the numbers of our people were thus augmented from various fources, Edward VI. is faid to have brought over, in 1549, many thousands of foreign manufacturers, who greatly improved our own fabricks of various kinds. Yet, they were not invited into a country, where the lower orders were even then very free, or very happy. The act + for the punishment of vagabonds and the relief of the poor, recites, "Forasmuch as idleness " and vagabondrie is the mother of all thefts and "other mischiefs, and the multitude of people " given thereto has been always here, within this "kingdom, very great, and more in number than " in other regions, to the great impoverishment of "the realm." This law therefore enacted, That if any person shall bring before two justices any runagate fervant, or any other which liveth idly

<sup>\*</sup> And. Chron. Com. v. i. p. 368.

<sup>+ 1</sup> Edward VI, ch. 3...

and loiteringly by the space of three days, the same justices shall cause the said idle and loitering servant or vagabond to be marked on the breast with the mark of V by a hot iron, and shall adjudge him to be a slave to the person who brought him, and who may cause him to work, by beating, chaining, or otherwise. The unenlightened makers of this disgraceful act of legislation became soon so ashamed, as to repeal the law, which they ought to have never made. And were it not, that it shews the condition of the country, and the modes of thinking of the higher orders, in 1547, it might, without much loss, be expunged from the statute book.

But the legislators of this reign were more happy in some other of their laws. They restored the statute of treasons of Edward III.; they encouraged the fisheries to Iceland, to Newfoundland, and to Ireland. They inflicted penalties on the fellers of victuals, who were not content with reafonable profit, and on artificers and labourers, confpiring the time and manner of their work. As " great inconveniencies, not meet to be rehearsed, had " followed of compelled chaftity," all politive laws against the marriage of priests were repealed. Manufactures were encouraged, partly by procuring the materials at the cheapest rate, but still more by preventing frauds. And agriculture was promoted by means of inclosing, which is faid to have given rife to Ket's rebellion in 1549. This event alone fufficiently proves, that the people had

had confiderably increased, but had not yet applied steadily to labour.

While the abfurd practice continued, during the reign of Mary, of promoting manufactures by monopoly, instead of competition, one law alone appears to have been attended with effects, continual and falutary. It is the act \* " for the mend-"ing of highways;" being now, fays the law, " both very noifome and tedious to travel in, and "dangerous to passengers and carriages." The first effort of English legislation, on a subject so much connected with the prosperity of every people, is the act of Edward I. for enlarging the breadth of highways from one market town to another. This law, which was enacted in 1285, was however intended rather to prevent robbery, than to promote facility in travelling. The roads of particular diftricts were amended by feveral laws of Henry VIII. But this act of Philip and Mary is the first general law, which obliged every parish, by four days labour of its people, to repair its own roads. The reign of Charles II. merits the praise of having first established turnpikes; whereby those, who enjoy the benefits of easy conveyance, contribute the necessary expence. Yet, when Cowley retired from the bum of men to Chertfey, in 1665, he thence invited Sprat to enjoy the pleasures of St. Anne's Hill, by telling him, that he might sleep the first night at Hampton

<sup>\* 2 &</sup>amp; 3 Philip and Mary, ch. 8.

Town: A poet of the present day would invite his friend at London, by saying, that he might easily step into the coach, and come down to breakfast. Even in the subsequent age, when Sir Francis Wronghead was chosen into Parliament, we hear of much preparation for his journey to town, and of many accidents by the way, owing to the badness of the roads: A parliament-man, at present, sends to the next stage for post-horses, when there is a call of the house, and arrives in Westminster from any distance, at any hour.

## CHAP. III.

The State of England at the Accession of Elizabeth.—
Her Laws.—The Numbers of People, during her Reign.—Her Strength.—The Policy and Power of the two subsequent Reigns.—The State of England at the Restoration.—The Number of People at the Revolution.—Restections.

BEFORE the commencement of the cele-brated reign of Elizabeth, a confiderable change had doubtless taken place in our policy, and in the numbers of our people. Agriculture, manufactures, fisheries, commerce, distant voyages, had all been begun, and made some progress, from the spirit that had already been incited. Yet, so little opulence had been hitherto accumulated by the people of England, that she was, on her acceffion, obliged to borrow feveral very small sums of money in Flanders, which had grown rich by its industry. From that epoch, however, England prospered greatly during the domestic tranquillity of a fleady government, through half a century, as well as afterwards, from the example of occonomy and prudence, of activity and vigour, which Elizabeth, on all occasions, set before her subjects.

The act of Elizabeth \* containing orders for

artificers, labourers, servants of hushandry, and apprentices, merits consideration; because we may learn from it the state of the country. Villains, we see, from this enumeration, had ceased, before 1562, to be objects of legislation. And we may perceive from the recital, "That the wages and allowances, rated in former statutes, are in divers places too small, and not answerable to this time, respecting the advancement of all things, belonging to the said servants and labourers,"—a favourable change had taken place in the fortunes of this numerous class. This law, as far as it requires apprenticeships, ought to be repealed; because its tendency is to abridge the liberty of the subject, and to prevent competition among workmen.

The same observation may be applied to the act "against the erecting of cottages \*." If we may credit the affertion of the legislature, "great "multitudes of cottages were daily more and more "increasing, in many parts of this realm." This statement evinces an augmentation of people: yet, the execution of such regulations, as this law contains, by no means promotes the useful race of

husbandry servants.

The principle of the poor laws, which may be faid to have originated in this reign, as far as it necessarily confines the labourer to the place of his birth, is at once destructive of freedom, and of the true interests of a manufacturing community, that

can alone be effectually promoted by competition; which hinders the rife of wages among workmen, and promotes at once the goodness and cheapness of the manufacture.

A few falutary laws were doubtless made during the reign of Elizabeth. But her legislation will be found not to merit generally much praise. Her acts for encouraging manufactures by monopoly; for promoting trade by prohibition; and for aiding husbandry, by preventing the export of corn, alone justify this remark. Her regulations, for punishing the frauds, which arise commonly in manufactures when they are encouraged by monopoly, merit commendation.

Having thus shewn the commencement of an increasing population, amidst famines and war, and traced a considerable progress, during ages of healthfulness and quiet, it is now time to ascertain the precise numbers, which probably existed in England towards the end of Queen Elizabeth's

reign.

From the documents which still remain in the Museum, it is certainly known, that very accurate accounts were often taken of the people, by the intelligent ministers of that great princess. Harrison, who has transmitted an elaborate description of England, gives us the result of the musters of 1575, when the number of fighting men was found to be — 1,172,674: Adding withal, that it was believed a full third had been omitted. Notwithstanding the greatness

Here then are two credible evidences to an important fact: That, in 1575, or 1583, the fighting men of England, according to enumerations, amounted to — 1,172,000 Which, if multiplied by 4, would prove the men, women, and children to have been — 4,688,000 If by 5, would prove them to have been — 5,860,000

• Hist. vol. v. p. 481.—vi. p. 179. By endeavouring to collect every thing that could throw light on the population of Elizabeth's reign, Mr. Hume has bewildered himself and his reader. Peck has preserved a paper, which, by proving that there were musters in 1575, confirms Harrison's account. [Defid. Curiofa, v. i. p. 74.] It is a known fact, that there was an enumeration of the mariners, in 1582, which correfponds with Raleigh's account. [Campbel's Pol. Survey, v. 1. p. 161.] That there were feveral surveys, then, is a fact incontrovertible; as appears indeed from the Harl. MSS. in Brit. Mus. Nos. 412 and 6,839. The Privy Council having required the Bithops, in July 1563, to certify the number of families in their several dioceses, were informed minutely of the particulars of each. Some of the Bishops returns may be feen in MSS. Harl. No. 595. Brit. Mus. From the Bishops certificates, as well as from the 31 Eliz. ch. 7. it appears, that the words families and households were then used synomimoufly. Without

Without comparing minutely the numbers, which we have already found, in 1377, with the people, who thus plainly existed in 1577, it is apparent, that there had been a vast increase in the intermediate two hundred years. Such then were the numbers of the fighting men, and of the inhabitants of England, during the reign of Elizabeth: and such was the power, while her revenue was inconsiderable, wherewith that illustrious Queen desended the independence of the nation, and spread wide its renown\*.

But, it is the ardour, with which a people are inspired, more than their numbers, that constitutes their real force. It was the enmity wherewith the armada had inspired England against Spain, which prompted the English people, rather than the

\* The particular number of the communicants and recufants, in each diocese and parish of England, was certified to the Privy Council, by the Bishops, in 1603.—MSS. Harl. Brit. Mus. No. 280.

And the number of communicants was - 2,057,033
Of recufants - - - 8,465

In all - 2,065,498

By the 33d Eliz. chap. 1. all persons upwards of sixteen years of age were required to go to church, under the penalty of twenty pounds. If the 2,065,498 contained all the persons, both male and semale, who were thus required to frequent the church, this number would correspond very well with the sighting men lately stated; and shew the people of England and Wales to have been between sour and sive millions, during Elizabeth's reign, though approaching nearer to the last number than the first.

English court, to aid the bastard Don Antonio to conquer Portugal: and twenty thousand volunteers engaged in this romantic enterprize, under those famous leaders, Norris, and Drake.-An effort, which shewed the manners of the age more than its populousness, ended in disappointment, as might have been foreseen, if enthusiasm and reafon were not always at variance. An alarm being given of an invasion by the Spaniards, in 1509, the Queen equipped a fleet, and levied an army, in a fortnight, to oppose them. Nothing, we are told, gave foreigners a higher idea of the power of England than this fudden armament. Yet, it is not too much to affert, that Lancashire alone, confidering its numerous manufactories, and extenfive commerce, is now able to make a more fleady. exertion\*, amidst modern warfare, than the whole kingdom in the time of Elizabeth.

The

\* The traders of Liverpool alone fitted out, at the commencement of the late war with France, between the 26th of August 1778 and the 17th of April 1779, a hundred and twenty privateers, armed each with ten to thirty guns, but mostly with fourteen to twenty. From an accurate list, containing the name and appointment of each, it appears, that these privateers measured 30,787 tons, carrying 1,986 guns, and 8,754 men. The sleet sent against the armada, in 1588, measured 31,985 tons, and was navigated by 15,272 seamen. And, from the efforts of a single town we may infer, that the private ships of war formed a greater force, during the war of the Colonies, than the nation, with all its unanimity and zeal, was able to equip under the potent government of Elizabeth. There was an enumeration, in 1581, of the shipping and

The accession of James I. was an event auspicious to the prosperity and the populousness of Great Britain. The tranquillity of the Northern counties of England, which it had been the object of so many of Elizabeth's laws to settle, was at once restored: and the two-and-twenty years of uninterrupted peace, during his reign, must have produced the most salutary effect on the industry of the people, while the neighbouring nations were engaged in warfare, though his peaceableness has cast an unmerited ridicule on the King.

The various laws, which were passed by this monarch, for suppressing the frauds of manufacturers, evince at once, that they had increased in confiderable numbers, and must have continued to increase. The acts for reformation of alehouses, and repressing of drunkenness, as they plainly proceeded from the puritanism of the times, must have promoted sobriety of manners, and attention to business. The act for the relief and regulation of persons, who were infected with the plague, must have had its effect, in preventing the frequent return of this destructive evil. Domestic industry was doubtless promoted by the act against monopolies: and foreign commerce was affuredly extended by the law, enabling all persons to trade with Spain, Portugal, and France. But, above

failors of England, which amounted to 72,450 tons, and 14,295 mariners. To this statement, Doctor Campbel adds, That the seamen of the ships registered in the port of London, in 1732, were 21,797. [Pol. Survey, vol. i. p. 161.]

all, the agricultural interests of the nation were ensured by the act for confirming the possession of copyholders; and still more, by the law for the general quiet of the subject, against all pretences of dormant claims on the lands, which had descended from remote ancestors to the then possessor. Of this falutary law the principle was adopted, and its efficacy enforced, by a legislative act of the present reign.

A comparison of the laws, which were enacted by the parliaments of Elizabeth, and of James, would leave a decided preference to the parliamentary leaders of the last period, both in wisdom, and in patriotism. The private acts of parliament, in Elizabeth's time, were made chiefly to restore the blood of those, who had been attainted by her predecessors: the private acts of James were almost all made for naturalizing foreigners. One of the last parliamentary grants of this reign was £. 18,000 for the reparation of decaying cities and towns, though it is not now easy to tell how the money was actually applied.

Elizabeth had begun the practice of giving bounties to the builders of fuch ships as carried one bundred tons. James I. merits the praise of giving large sums for the encouragement of this most important manusacture. And while Charles I. patronized every ornamental art, he gave from a very scanty revenue a bounty of sive shillings the ton for every vessel of the burthen of two hundred tons. These notices enable us to trace the

fize of our merchant-ships through a very active century of years. The ministers of Elizabeth had considered a vessel of one hundred tons as sufficient for the purposes of an inconsiderable commerce: the advisers of Charles I. were not satisfied with so small a size. It was to this wise policy, that the trading ships of England were employed, ere long, in protecting her rights, and

even in extending her glory.

The act which, in 1623, reduced the interest of money to eight per cent. from ten, shews sufficiently, even against the preamble of it, that complains of decline, how much the nation had profpered, and was then advancing to a higher state of improvement. Such laws can never be fafely enacted till all parties, the lenders as well as the borrowers, are properly prepared to receive them. The chearfulness of honest Stowe led him to see, and to represent, the state of England, during the reign of James, as it really was. He fays, as Camden had faid before him in 1580, that it would in time be incredible, were there not due mention made of it, what great increase there is, within these sew years, of commerce and wealth throughout the kingdom; of the great building of royal and mercantile ships; of the repeopling of cities, towns, and villages; beside the sudden augmentation of fair and coftly buildings. The great measure of the reign of King James, which was productive of effects, lafting and unhappy, was the settlement of colonies beyond the Atlantic.

Lord Clarendon exhibits a picture equally flattering, of the condition of England, during the peaceful years of Charles I. And the representation of this great historian is altogether consistent with probability, and experience. The vigorous fpirit, which Elizabeth had bequeathed to her people, continued to operate, long after she had ceased to delight them by her presence, or to protect them by her wisdom. The laws of former legislators produced successively their tardy effects. And it ought to be remembered, that neither difputes among the great, parliamentary altercations, nor even civil contests, till they proceed the length of tumult, and bloodshed, ever produce any bad confequences to the industry, or comfort, of the governed.

The civil wars, which began in 1640, unhappy as they were while they continued, both to king and people, produced in the end the most falutary influences, by bringing the higher and lower ranks closer together, and by continuing in all a vigour of design, and activity of practice, that in prior ages had no example.

One of the first consequences of real hostilities was the establishment of taxes, to which the people had seldom contributed, and which produced, before the conclusion of tedious warfare, the enormous sum of £.95,512,095\*. The gallant supporters

of

<sup>\*</sup> Stevens's Hift. of Taxes, p. 296. But Stevens includes the fales of conficated lands, compositions for estates, and such other more oppressive modes of raising money. There were

of Charles I. gave the fovereign, whom they loved, amidst his distresses, large sums of money, while confiscations lest them any thing to give. Here, then, were the mines of Potosi opened in England. The opulence, which industry had been collecting for ages, was now brought into action, by the arts of the tax-gatherer: and the country-gentlemen, who had long complained of a scarcity of money, contributed greatly, by unlocking their coffers, to remove the evil, that they had themselves created by hoarding.

One of the first effects of civil commotion was the placing of private money in the shops of gold-smiths, for its better security, and for the advantage of the interest, which, at the commencement of banking, was allowed the proprietors. By facilitating the ready transfer of property, and the easy payment of private debts, as well as public imposts, banking may be regarded as the fruitful mother of circulation. The collecting of taxes, and the subsequent expenditure, raised ere long the price of all things. Owing to those causes chiefly, the legal interest of money was reduced, in 1651, to six per cent. And the reduction of interest is at once a proof of previous acquisition, and a means of suture prosperity.

The Reftoration of Charles II. induced the people to transfer the energy, which they had exerted

were collected, by excises only, £.10,200,000; and by tonnage and poundage £.5,700,000.

during twenty years hostilities, to the various operations of peace. The feveral manufactories, and new productions of husbandry, that were introduced from foreign countries, before the Revolution, not only formed a new epoch, but evince a vigorous application to the useful arts, in the intermediate period. The common highways were enlarged and repaired, while turnpikes were placed on the great Northern road, in the counties of Hertford, Huntingdon, and Cambridge. Rivers were deepened for the purposes of internal conveyance by water. The acts of navigation created ship-carpenters and failors, though these falutary laws were long complained of, as destructive to commerce. Foreign trade was increased by opening new markets, and by withdrawing the alien duties, which had always obstructed the vent of native manufactures. Those measures alone. that made internal communications at once easy and fafe, would have promoted the prosperity, and the population of any country.

But, above all, the change of manners, and the intermixture of the higher and middle ranks, by marriages, induced the gentry, and even the younger branches of the nobility, to bind their fons apprentices to merchants, and thereby to enoble a profession, that was before only gainful; to invigorate traffic by their greater capitals, and to extend its operations by their superior knowledge. Hence, Child, Petty, and Davenant, agreed in afferting,

afferting\*, in opposition to the party writers of the times, that the commerce and riches of England did never, in any former age, encrease so fast as in the busy period from the Restoration to the Revolution.

Yet, in 1680, was published Britannia Languens; in order to prove that, in the same period, a kind of common consumption bath crowded upon us.

The truth of their conclusion is, however, proved more fatisfactorily by the following detail, than by any document, which has been yet submitted to the public. It is an authentic account of the Customs, which were collected in England, and which, as they more than doubled in the period from the Restoration to the Revolution, shew clearly, that the trade of England prospered, in the mean time, nearly in the same proportion. There was an additional duty on wines imposed, in 1672, and an impost on wine, tobacco, and

<sup>\*</sup> The Board of Trade represented in December 1697:

We have made inquiry into the state of trade in general,

from the year 1670 to the present time: and from the best

calculations we can make, by the duties paid at the Custom
thouse, we are of opinion, that trade in general did consi
derably increase, from the end of the Dutch war in 1673, to

1689, when the late war began." Yet, the Board seem not
to have attended to the 25 Cha. II. ch. 6; which wisely
enacted. That Denizens and Aliens should pay no more taxes
for the rative commodities of this kingdom, or for sish caught
in English ships, when exported, than subjects.

linen, in 1685: But, as these duties were kept separate, they appear neither to have swelled, nor diminished, the usual receipt of the custom-house duties, in any of the years, either of peace, or of war:

From the before-mentioned circumstances, and facts, which prove, that there had been many additional employments, we may reasonably infer,

that there had also been a considerable augmentation of inhabitants, who were the more important to the state, because they were the most industrious. But many emigrated, it has been faid, to the colonies, and many perished by pestilence. Yet, the Lord Chief Justice Hale insists, "That " mankind hath still increased, even to manifest " fense and experience:" and because, says he, this is an affertion of fact, it is impossible to be made out, but by instances of fact. If however, he adds, we should institute a comparison between the present time (1670), and the beginning of Queen Elizabeth's reign (1558), and compare the number of trained foldiers then and now, the number of fubfidy men then and now, they will eafily give an account of a very great increase of people within this kingdom, even to admiration \*.

A mere

\* See Lord Hale's convincing argument in The Origination of Mankind confidered, ch. 10. Sir John Dalrymple found, in King William's cabinet, a minute account of the number of freeholders in England, which was taken by order of that monarch, in order to find out the proportion between churchmen, diffenters, and papifts; and which Sir John has published in the Appendix to his Memoirs:

This comparison, after allowing for the original inaccura-

A mere question of fact, with regard to the humber of births, at any two distant periods, may doubtless be either confirmed, or disproved, by an appeal to the parish registers; which, containing a collection of facts, may be regarded as one of the best proofs, that the nature of the enquiry admits. And the Lord Chief Justice Hale remarked of them, because he was struck with the force of their evidence, That they gave a greater demonstration of the gradual increase of mankind, than a bundred notional arguments can either evince or confute. For, a greater number of births, in any one period more than at any prior epoch, must proceed from a greater number of breeders; which denotes a more numerous population. And, from an attentive examination of such proofs, Graunt proceeded\*, in 1662, to shew, with great ability, the progressive increase of the people, and to prove how eafily the country could fupply the capital

cies of both accounts, shews a great change in the numbers, in the opinions, and practice of the people, from 1603 to 1689.

\* See The Observations on the Bills of Mortality. Doctor Price has quoted Tindal, for the fact, That there appeared, by the hearth-books of 1665, in England and Wales,

1,230,000 houses.

The acknowledged number in 1690 - 1,300,000

This, if we may credit Tindal, is sufficient evidence of a rapid increase in no long period, Graunt calculated the people of England and Wales, in 1662, at 6,440,000 persons.

with numerous recruits, without any fensible diminution.

Having thus traced a gradual progress in population, it is now time to afcertain the precise numbers at the Revolution. And Gregory King, who has been praised by Davenant for his research and his skilfulness, has left us documents, from which we may form an estimate sufficiently accurate for the uses of history, or the purposes of legislation. From an inspection of the hearth-books, and the assessments on marriages, births, and burials, King formed calculations of the numbers of families, houses, and people; which, according to Davenant, "were perhaps more to be relied upon, than "any thing that had been ever done of the like "kind."

It had been the fashion of the preceding age to state the numbers of mankind, in every country, too high: from this period ingenious men were carried away by a reprehensible self-sufficiency to calculate them too low. Of the statements of King, it was remarked by Mr. Robert Harley\*, in 1697, "These assessments are no good soundation; heads at a medium being (according to the computation) per house in London only five: "omissions in the country are probably greater than in London, because numbering the people is there more terrible. The polls are instances: stamilies of seven or eight persons, being not

<sup>\*</sup> Harl. MSS. in the Museum, Nos. 6,837-7,021.

<sup>&</sup>quot; numbered

"remote counties." Yet, by thus calculating  $4 + \frac{1}{13}$ , instead of 5, in every family, which was still considered as synonymous with bousehold, this would demonstrate an increase of a million, during the foregoing century. So our poets used the word bousehold to signify a family living together: Thus, Shakspeare:—

"Two households, both alike in dignity, In fair Verona, where we lay our scene, From ancient grudge break to new mutiny."

## Thus, MILTON:

Of God observ'd

The one just man alive, by his command,
Should build a wond'rous ark, as thou behelds,
To fave himself and household from amidst
A world devote to universal wreck.

## Thus, the more flippant Swift:

In his own church he keeps a feat, Says grace before and after meat; And calls, without affecting airs, His household twice a-day to prayers.

Davenant, by publishing only extracts from King's observations, and by speaking consusedly of families and houses, has done an injury to King, and to truth. All will appear consistent and clear, when this ingenious calculator is allowed to speak for himself.

The number of bouses in the kingdom, as charged, fays he, in the books of the Hearth Office at Lady Day 1690, were, 1,319,215: But, whereas the chimney money being charged on the tenant, or inhabitant, the divided houses stand as fo many distinct dwellings, in the accounts of the faid Hearth Office. And whereas the empty houses, fmiths' shops, &c. are included in the faid account, all which may very well amount to 1 in 36 or 37, (or near 3 per cent.) which, in the whole, may be about 36,000 houses; it follows, that the true number of inhabited houses is not above - 1,290,000; which, however, we shall call, in round numbers. 1,300,000

Having thus adjusted the number of houses, we come now, continues he, to apportion the number of souls to each, according to what we have observed from the said affessments on marriages, births, and burials.

tained	105,000	at 4,57	479,600
The cities and			
market towns	195,000	4,3	838,500
The villages and			
hamlets -	1,000,000	4	4,000,000
	Service and Service Services	-	-
In all -	1,300,000	429	5,318,100
		-	-

But, confidering that the omiffions in the faid affeffments may well be,

In London and the bills of morta-

lity - - - 10 per cent. or 47,960 fouls

market towns - 2 per cent. or 16,500

In the villages and

hamlets - - I per cent. or 40,000

In all - - 104,460 fouls:

It follows, that the true number of people, dwelling in the 1,300,000 inhabited houses, should be - - - 5,422,560.

Lastly; whereas the number of transitory people, as feamen and foldiers, may be accounted 140,000; whereof nearly one half, or 60,000, have no place in the said affessments: and that the number of vagrants, as hawkers, pedlars, crate £ 4 carriers,

carriers, gipfies, thieves, and beggars, may be reckoned 30,000; whereof above one half, or 20,000, may not be taken notice of in the faid afferiments, making in all 80,000 persons: It follows, that the whole number of people in England and Wales is much about 5,500,000; viz.

In London - - 530,000 fouls

In the other cities and towns - 870,000

In the villages and hamlets - 4,100,000

In all - - 5,500,000

The number of inhabited houses
being about - 1,300,000

The number of families about 1,360,000

The people answer at 4½ per house, and 4 per family.

Thus much from Gregory King's Political Obfervations \*. And his flatements are doubtless very curious, and even exact, though we now know, that the number of dwellers, which he allowed to every house, and to every family, was a good deal under the truth, as Mr. Robert Harley at the time suspected.

Subsequent inquirers have enumerated the houses and the inhabitants of various villages, towns, and cities, instead of relying on the defective returns of

<sup>\*</sup> There is a very fair copy of King's Observations, in MSS. Harl. Brit. Mus. No. 1,838.

tax-gatherers. Doctor Price became at length disposed to admit, from the enumerations which he had seen, that five persons and a sixth, reside in every house\*. Mr. Howlet, from a still greater number of enumerations, insists † for sive and two-sisths. It will at last be found, perhaps ‡, that sive and two-sisths are the smallest number, which, on an average of the whole kingdom, dwells in every house.

Little doubt can furely now remain of there having been in England and Wales 1,300,000 inhabited houses at the Revolution. Were we to multiply this number by five, it would demonstrate a population of fix millions and a half: were we to

- \* Reversionary Payments, v. ii. p. 283.
- + Examination of Price, p. 145.

1 In 1773, Dr. Price infifted that there were not quite five in every bouse. Observations on Reversionary Payments, 3d edition, p. 184.] In 1783, the Doctor seemed willing to allow five one-fixth in every house: But he still contends, That if you throw out of the calculation Liverpool, Manchester, Birmingham, and other populous towns, the number in every house ought to be less than five. Observations on Reversionary Payments, 4th edit. v. ii. p. 288-9.] The Rev. Mr. New made a very accurate enumeration of the parish of St. Philip and St. Jacob in the city of Bristol, during the year 1781, and found 1,529 inhabited houses, and therein 9,850 souls. These numbers prove, that more than six one-third dwell in every house. And from this enumeration we may infer, That in the full inhabited city of Bristol, fix at least reside in every house. If, in the spirit of Doctor Price, we throw out of the calculation all populous places, and fludiously collect such decaying towns as Sandwich, the proportion to every house must be limited to five.

multiply by five and two-fifths, or even by five and one-fifth, this operation would carry the number up nearly to feven millions: and feven millions were confidered by fome of the most intelligent men of that day, as the whole amount of the people of this kingdom at the Revolution.

But, if we take the lowest number, of six milshons and a half, and compare it with five millions, the highest number probably in 1588, this comparison would evince an increase of a million and a half in the subsequent century, and of more than four millions, from 1377. Yet, Doctor Price considered the epoch of the Reformation (1517) as a period of greater population than the æra of the Revolution.

In giving an account of the reign of King William, Sir John Dalrymple remarks, "That three and twenty regiments were completed in fix weeks. This is doubtlefs an adequate proof of the ardour of the times, but it is a very flight evidence of an overflowing populousness. Want of employment often fends recruits to an army, which, in more industrious years, would languish without hope of reinforcements. We may learn, indeed, from Sir Josiah Child, That it was a question agitated, during the reign of Charles II. "If we have more " people now than in former ages, how came it to " pass, that in the times of Henry IV. and V. and " even in prior times, we could raife fuch great " armies, and employ them in foreign wars, and se yet retain a fufficient number to defend the c kingkingdom, and to cultivate our lands at home? I answer first," says this judicious writer, "that bigness of armies is not a certain indication of the numerousness of a nation, but sometimes of the government and distribution of the lands; where the prince and lords are owners of the whole territory: although the people be thin, the armies upon occasion may be very great, as in Fez and Morocco. Secondly, princes armies in Europe are become more proportionable to their purses, than to the numbers of their peo-

Thus much it was thought proper to premife, with regard to the previous condition and policy of England, as well as its populousness at different periods anterior to *The Revolution*, when this Estimate begins.

#### CHAP. IV.

Opinions as to the Strength of Nations.—Reflections.— The real Power of England, during King William's Reign.—The State of the Nation.—The Losses of her Trade from King William's Wars.—Her Commerce revives.—Complaints of Decline, amidst her Prosperity.—Reslections.

to those circumstances, which form the strength of nations, either actual, or comparative. One considers the power of a people "to consist in their numbers and wealth." Another insists, "that the force of every community most essentially depends on the capacity, valour, and union of the leading characters of the state." And a third, adopting partly the sentiments of both, contends, "that though numbers and riches are highly important, and the resources of war may decide a contest, where other advantages are equal; yet the resources of war, in hands that cannot employ them, are of little avail, since manners are as effential, as either people or wealth."

It is not the purpose of this Estimate to amuse the fancy with uninstructive definitions, or to bewilder the judgment with verbal disputations, which are as unmeaning as they are unprofitable. The glories glories of the war of 1756 have cast a continued ridicule on the far-famed Estimator of the manners and principles of those times. Recent struggles have thrown equal ridicule on other calculators of an analogous spirit. And we may find reason in the end to conclude, that the qualities of the mind, either vigorous or esseminate, have undergone, in this island, no unhappy change, whatever alteration there certainly is in the labour of the hands of our people, from the epoch of the Revolution to the present moment.

But, from general remark, let us descend to minute investigations, with regard to the progressive numbers of the people, to the extent of their industry, and to the successive amount of their traffic and accumulations; because our resources arose then, as they arise now, from the land and labour of this island alone.

The infult offered by France to the fovereignty of England, by giving an afylum to an abdicated monarch, and by difputing the right of a high-minded people to regulate their own affairs, forced King William into an eight years war with that potent country, which he personally hated, and with which he ardently wished to quarrel. He had therefore no inclination to weigh in very scrupulous scales the wealth of his subjects against the greater opulence of their rivals, who were in those days more industrious, and were further advanced in the practice of manufacture, and knowledge

of traffic. Yet, the defire of that warlike monarch being feconded by the zeal of his people, whose resources were not then equal to their bravery, he was enabled to engage in an arduous dispute for the most honourable end. Happy! had hostilities ended, as foon as the independence of the nation was vindicated from infult, and when the interests of the people required the cessation of warfare.

We may form a fufficient judgment of the strength of England, at that æra, from the following detail:

The number of fighting men, according to the calculation of Gregory King, as cited with approbation by Davenant, was 1,308,000; yet the one-fourth of the people formed the men fit for war, whatever may have been the real population of England, during the reign of King Williami.

The yearly income of the nation from its land and labour amounted, if we may credit the statement of Gregory King, to - £.43,500,000

The yearly expence of the people for their necessary subsistence - 41,700,000

The yearly accumulation of profit £.1,800,000

The value of the whole kingdom, according to Gregory King, £.650,000,000\*; which, forming the capital whence income arose, was no proper fund for taxation.

Davenant states, from various conjectures and calculations, the circulating money at £.18,500,000 †, while there yet existed in the nation no papermoney, and little circulation; which, by facilitating the easy transfer of property, is so favourable to the levying of taxes.

King James's annual income amounted only to £.2,061,856. 7s.  $9\frac{1}{2}d.$  ‡; which was a greater revenue than any of his predecessors had ever

enjoyed.

Of this there remained in the exchequer, on the 5th of November, 1688, £.80,138 §; which

\* See Gregory King's Polit. Observ. in MSS. Harl.

Brit. Mus. No. 1,898.

† Gregory King having stated the silver coin at eight million and a half in 1688, and the gold coin at three million, Mr. Robert Harley thereupon remarked, "That the mint accounts would make us believe there is more gold coin than three million; but both accounts together would make a good estimate."—MSS. Harl. Brit. Mus. 1,898. The circulating coin may therefore be taken at eleven million and a half during King William's reign. It was one of the tenets of Doctor Price, to maintain, that we had more coins in circulation, during those times than at present.

‡ Hist. of Debts, p. 6-7.

§ For the accurate informations, which these sconvey from a transcript of the Exchequer-books in King William and Queen Anne's reigns, the public owe an additional obligation, and the compiler a kindness, to the liberal communication of Mr. Astle.

little enabled King William either to defray the expences of the Revolution, or to prepare for a war with France.

The nett income paid into the exchequer, in 1691, from the customs and excise, from the land, and from polls, amounted only to £.4,249,757; of which there were applied towards carrying on the war £.3,393,634, and to the support of the civil establishment f. 856,123 \*.

The average of the annual fupplies during the war, which were raifed with difficulty from a diffatisfied people, amounted only to £.5,105,505 +; whence we may form an opinion of the force,

which could then be exerted, though it must be admitted, that the same nominal sum had in those days a greater power than it had in after times.

There were borrowed by the government, at an interest of seven and eight per cent. while the legal interest of money was only fix, from the 5th of November, 1688, to Lady-day, - - £.44,100,795;

Of which there were mean while repaid - - 34,034,018;

Of this debt there remained due at Lady-day, 1702 ‡ - £.10,066,777

So unproductive had each branch of taxes proved, during every year of the war, that the revenue, which had existed before it began, fell above one-

<sup>\*</sup> Mr. Aftle's Transcript.

half in five years\*; and the deficiencies appeared to have swelled, before the session of 1696, to what was then deemed the enormous fum of f. 6,000,460; which greatly enfeebled every exertion of the government, by the advance in the price of all things. The annual collection of taxes, to the amount of two million and a half, more than had been levied on the country in preceding times, while their foreign trade was cut off, was alone sufficient to embarrass a people, who had greater powers of industry and circulation. It is an instructive fact, which is transmitted by Davenant, that imposts did not then enhance the price of the commodity to the confumer, when in its highest state of improvement, but fell on the grower, who fold the article in its rudest condition; the excise did not raise the price of malt, but lowered the price of barley. And this fact evinces how much confumption was embarraffed, and circulation obstructed, during the distresses of the Revolution war.

The annual value of the furplus produce of the land and labour of England, which was then exported to foreign countries, amounted only to £.4,086,087. Had the coins of England been as numerous as Davenant supposed them, they could not long have carried on a war beyond the limits of the empire. And the cargoes, which were thus sent abroad, could not, from their inconfiderableness, have filled a mighty void, for any length of years.

<sup>\*</sup> Davenant's Effay on Ways and Means.

The tonnage of English shipping, which were annually employed for the exportation of the before-mentioned cargoes, amounted only to 190,533 tons; which, if we allow them to have been navigated at the rate of twelve mariners to every two hundred tons, required only 11,432 sailors; yet this was the principal nursery, whence the navy of England could alone be manned, during the wars of King William.

The following statement will give us ideas sufficiently accurate of the progressive force of the royal fleet:

				Tons.		Sailors.
Which	in	1660	carried	62,594	-	-
	in	1675	-	69,681	-	30,951
	in	1688	494	101,032	-	
	in	1695	-	112,400	-	45,000

Such, then, was the naval force that, during the hostilities of William, could be fent into the line against the potent navy of France, which, in one busy reign, had been created, and raised to greatness. It was found almost impossible to man the fleet, though the admiralty were empowered by Parliament to lay strict embargoes on the merchants ships\*. And this alone ought to give us a lesson

<sup>\*</sup> Sir J. Dalrymple has published a paper [Appendix, p. 242.] in order to justify King William from the charge— of not exerting the natural strength of England in a seawar against France, after the battle of La Hogue;" which proves.

a lesson of what importance it is to the state to augment the native race of carpenters and failors by every possible means.

The great debility of England, during the war of the Revolution, arose from the practice of hoarding in times of distrust, which prevented circulation; from the disorders of the coin, that greatly augmented the former evil, while the government issued tallies of wood for the supplying of specie; from the inability of the people to pay taxes, while they could find no circulating value, either

proves, that his ministers thought it impossible to increase the seet;—"as not having ships enough, nor men, unless we stop even the crast-trade." There are a variety of documents in the Plantation-office, which demonstrate the same position. And see the subjoined comparative view of the seets of France and of England, in 1693.

The following "Comparison of the French and English fleets in 1693, formed from lists brought into the House of Commons by Secretary Trenchard," will shew how nearly equal they were in sorce, even subsequent to the victory of La Hogue in the preceding year. [Bibl. Harley, Brit. Museum, No. 1,398.]

for their labour or property: add to these, the turbulence of the lower orders, and the treachery of the great. And above all, if we may believe the ministers of King William \*, Nobody knew one day what a House of Commons would do the next.

From this review of the debility of England, we may with the more propriety inquire into the losses of our trade, during that distressful war. A more confirmed commerce could not have stood fo rude a shock as our manufactures and commerce received, from the imbecility of friends, no less than from the vigour of soes, amidst a disastrous course of hostilities of eight years continuance. And the clamours, which were in the end justly raised against the managers of the marine, were assuredly founded in prodigious losses. An examination of the following proofs will evince this melancholy truth:

Dr. Davenant took a different way to go to the fame point, because he had not access to a better.

<sup>\*</sup> Dal. Mem. Appendix, p. 240-

<sup>+</sup> Mr. Aftle's Transcript.

Having stated the yearly amount of the customs, from 1688 to 1695 inclusive, he inferred from the annual defalcations: "So that it appears sufficiently, that in general, since this war, our trade is very much diminished, as by a medium of seven years the customs are lessened about \$\int\_{.138,707.7s}\$. a year." Dr. Davenant justly complained of the breaches of the Act of Navigation, "during the slack administration of this "war;" so that strangers seem to have beaten us out of our own ports. For, it was observed, that there were, in the port of London,

It would be injurious to conceal, that the fame able author, who feems, however, to have fome-

\* If with the year mentioned by Davenant, we contrast the following years, we shall see an assonishing increase of the navigation and commerce of London. Thus, there were entered in this great port,

The number of ships, which were registered in the port of London, in the year ending the 30th Sept. 1793, was 1,886, carrying 378,787 tons.

times complained without a cause, acknowledged, "That perhaps no care nor wisdom in the world "could have fully protected our trade during this "last war with France."

An attentive examination of the numbers of our ships cleared outwards, and of the cargoes exported in them, will convince every candid mind, that in every war there is a point of depression, in trade, as there is in all things, beyond which it does not decline; and from which it gradually rises beyond the extent of its former greatness, unless it meet with additional checks. And the year 1694\*
marked,

\* The following detail, from the Plantation-office, will give the reader a still clearer view of the navigation of England, during the embarrassiments of the Revolution war.

	Ships cleared outwards.  Tons D <sup>o</sup> Englin. foreign. Total.  44,912 - 59,750 - 104,662  73,176 - 28,752 - 101,928	36,512 - 80,875 - 117,387 32,616 - 27,876 - 60,492

	39,648 - 41,500 = \$1,748 33,408 - 28,224 - 61,632	Statute and section and sectio
Total,	73,056 - 69,724 - 142,780  Balance of Trade, 57,260  20,040	94,630 - 105,410 - 200,040

marked, probably, the lowest state to which the eight years hostilities of that disastrous period beat down the national traffic. But the commerce of England, which is fustained by immense capitals, and inspired by a happy skill and diligence, may be aptly compared to a spring of mighty powers, that always exerts its force in proportion to the weight of its compression; and that never fails to rebound with augmented energy, when the pressure is removed by the return of peace. It is nevertheless a fact equally true, that however the cessation of war may give fresh ardour to our industrious classes at home, and enable our merchants to export cargoes of unexampled extent; yet, there are never wanting writers, who, during this prosperous moment, complain of the decline of our manufactories, and the ruin of our trade. It is proposed to illustrate both these facts, in the following sheets; because, from the illustration we may derive both intelligence, and amusement.

Of the foregoing detail it ought to be observed, that it does not appear in the Plantation-office altogether in this form: the number of ships, English and foreign, entered either in London and the outports, is only specified, and the average tonnage of each thus particularly given: the English ships in the port of London were estimated at 112 tons each; the foreign at 125 tons each: the English ships at the outports at 72 each; the foreign at 98 tons each. Whence the editor was enabled, by an easy calculation, to lay before the public a more precise account of the commerce of England, during the war of the Revolution, than has yet been done.

# Let us then attend to the following proofs:

	Ships cleared outwards, Yalue of car-
Peace of Ryf- ? wick, 1697 \$	Tons Eng. D' foreign. Total. £.  144,264 - 100,524 - 244,788 - 3,525,907
1699	293,703 - 43,625 - 337,328 - 6,709,881
1701	

In addition to this fatisfactory detail, let us confider the revenue of the post-office, which, shewing the extent of correspondence, at different periods, furnishes no bad proof of the progress of commerce. The nett income of the posts, according to an average of the eight years of King William's wars f.67,222D° of the four years of subsequent

peace 82,319\*

Yet, amidst all this prosperity, Polexsen, one of the Board of Trade, published a discourset, in 1697, in order to fliew, "That, so great had been the loffes of a feven years war, if a great stock be absolutely necessary to carry on a great trade, we may reasonably conclude the stock of this nation is fo diminished, it will fall short; and that, without prudence and industry, we shall rather confume what is left, than recover what we have loft." Davenant, the antagonist of Polexsen, stunned every

<sup>\*</sup> Mr. Aftle's Transcript.

<sup>\*</sup> Discourse on Trade, Coin, and Paper Credit.

coffee-house, at the same time, with his declamations on the decay of commerce. "It will be a "great matter for the present," says he \*, "if we "can recover the ground our trade has lost during "the last war." But we have seen, that we had already gained superior ground at the precise moment wherein he, in this manner, lamented our recent losses both of shipping and trade. So different are the deductions of theory from the informations of experience, that temporary interruptions are constantly mistaken for symptoms of habitual decline. And our commercial writers, owing to this cause, are full of well-meaning falsehood, while they sometimes propagate purposed deception.

The Revolution may justly be regarded as an event in our annals, the most memorable and interesting; because its effects have been the happiest, in respect to the security, the comfort, and prosperity of the people. Yet, it has for some years been insisted, with a plausibility, which precludes the charge of intended paradox, that every cause of depopulation—a devouring capital, the waste of wars, the drain of standing armies, emigrations to the colonies, the engrossing of farms, the in-

<sup>#</sup> Discourse on Trade, 1698.

closing of commons, the high price of provisions, and unbounded luxury—all have concurred, fince that fortunate æra, to dispeople the nation; the numbers of which, it is pretended, have decreased a million and a half, and still continue to decrease.

In opposition to such controvertists it is not sufficient to argue, That, having traced a gradual advance in population, during fix centuries of political distraction and domestic misery, and proved an addition of more than four millions to the original stock, in 1066, notwithstanding wasteful wars, desolating famines, and habitual debility; we ought thence to infer, that the position of a decreasing populousness, during a period the most free, and prosperous, and happy, can alone be maintained, by the decifive proof of enumerations, or at least, by a mode of induction, which is equal to them in the weight of its inference. It is proposed then, to continue a brief review of the principal occurrences in our history, since the year 1688, that could have either carried on the former progress of our population, or have promoted a gradual decline.

The Revolution did not indeed produce fo much any alteration in the forms of the constitution, as it changed the maxims of administration; which have every where so great an influence on the condition of the governed. Yet, from thence a new æra is said \* to have commenced, in which the bounds

<sup>\*</sup> Blackft. Com. vol. i. p. 213.

of prerogative and liberty have been better defined, the principles of government more thoroughly examined and understood, and the rights of the subject more explicitly guarded by legal provisions, than in any other period of the English history. One article alone, in the Declaration of Rights, was worth, on account of the confolation, which it administered to the lower orders, the whole expence of the enfuing war: "That excessive bail shall not be required, or excessive fines be imposed, or cruel and unusual punishments be inflicted." Philosophers have justly remarked, that feverity of chastifement has as natural a tendency to debase mankind, as mildness to elevate them. It was not fo much from the declaration, that the levying money without consent of Parliament is unlawful, that private property was fecured, as from the impartial administration of justice, which has regularly flowed from the independence of the Judges. Anderson\* did not forget to give "a brief view of the establishment of that free constitution, as it did certainly contribute greatly, in its consequences, to the advancement of our industry, manufactures, commerce, and shipping, aswell as of our riches and people, notwithstanding feveral expensive and bloody wars."

The hearth-money was foon after taken away; "being a great oppression (say the Parliament) of the poorer fort, and a badge of slavery upon the

<sup>\*</sup> Chron. Acc. of Com. vol. ii. p. 189.-95.

whole." During the fame fession, the first bounty was given on the exportation of corn: "How much," fays that laborious writer, "this bounty has contributed to the improvement of husbandry, is too obvious to be disputed:" and accordingly, the year 1699 has been noticed as the epoch of the last great dearth of corn in England. A flourishing agriculture must have necessarily promoted populoufness in two respects; by offering encouragement to labour; by furnishing a supply of provifions at once confrant and cheap, which were both extremely irregular in former times. The act of toleration, which was at the fame time paffed, by " giving ease to scrupulous consciences," tended to promote our industry and traffic, and confequently the progress of population: for, we may learn of Sir Josiah Child how many people had been driven out of England, from the rife of the Puritans in the reign of Elizabeth, to the bleffed æra of toleration.

On the other hand, it has been already shewn how much the eight-years war, which grew out of the Revolution, distressed the foreign trade of England. As King William employed chiefly the troops of other nations; as the profligate and the idle principally recruited the army; as humanity now softened the rigours of war; it may be justly doubted, if we lost a greater number by the miseries of the camp, than were acquired by the arrival of resugees, who, during that period, sought security in England. And of this opinion was

Doctor Davenant\*, who was no unconcerned spectator of those eventful times. Yet, it is a known fact, that the taxes, which were fuccessively imposed, did not produce in proportion to their augmentations. And if we attribute this unfavourable circumstance to the inability and pressures of the people, more than to the novelty of contributions, to the enmity of many against the new government, and to the diforders of the coin, we ought undoubtedly to infer, that the imposition of additional burdens necessarily stopped the progress of numbers. The average price of wheat, from 1692 to 1600, was nearly eight shillings the bushel, according to Fleetwood. There have been terrible years dearths of corn, faid Swift, and every place is strewed with beggars; but dearshs are common in better climates, and our evils here lie much deeper.

Nevertheless, internal traffic flourished in the mean time. In 1689, the manufactures of copper and brass were revived, rather than introduced. The Sword-blade company, which settled in Yorkshire, "brought† over foreign workmen." The French refugees improved the sabricks of paper, and of silk, especially the lutestrings and alamodes; which were so much encouraged by Parliament, that the weavers, being greatly increased in numbers, as well as in insolence, before the year 1697, raised a tumult in London against

<sup>\*</sup> Vol. iii. p. 369.

<sup>+</sup> And. Chron. Acc. of Com. vol. ii. p. 192.

the wearers of East India manufactures\*. The establishment of the Bank of England in 1694, by facilitating public and private circulation, produced all the salutary essects, that were originally foretold, because it has been constantly managed with a prudence, integrity, and caution, which have never been exceeded. By giving encouragement to sisheries, in 1695, a hardy race must have been greatly multiplied; and by encouraging, in 1696, the making of linens, subsistence was given to the young and the old.

The conclusion of every lengthened war deprives many men of support, who are therefore obliged to re-enter once more into the competitions of the world. Yet, Doctor Davenant † affured the Marquis of Normanby, in 1699, "that we really want people and hands to carry on the woollen and linen manufactories together." Admitting the truth of an affertion, of which indeed there is no reason to doubt, the observation is altogether confiftent with facts and with principles. In less than two years from the peace of Ryswick, the disbanded idlers had been all engaged in the manufactories, which we have feen established, and in the foreign traffic, that has been shewn to have flourished so greatly from this epoch to the demife of King William. Now, what does the position of Davenant prove, more than that uncommon

<sup>\*</sup> And. Chron. Acc. of Com. vol. ii. p. 220.

<sup>†</sup> Essay on East India Trade, p. 46.

demand never fails to produce remarkable scarcity, till a fufficient fupply has been found? And Sir Iofiah Child was therefore induced, a hundred years ago, to lay it down as a maxim; Such as our employment is for people, so many will our people be. Were we now to compare the circumstance mentioned by Sir John Dalrymple, of the raising of three-and-twenty regiments in fix weeks, during the year 1689, with the fact stated by Doctor Davenant, " of the scarcity of hands" in 1699, we ought to infer, that an alteration of manners, owing to whatever cause, had in the mean time taken place; and that the lower orders of men had learned from experience, to prefer the gainful employments of peace to the less profitable, and more dangerous, adventures of war.

Yet, admitting that the moral causes before-mentioned had naturally produced an augmentation of numbers, during the reign of William, we ought here to remark, that the people who chiefly shared in the felicities, or were incommoded by the factions of those times, must have drawn their first breath prior to the Revolution: the middle-aged, and the old, who enacted the laws, and as ministers, or magistrates, carried them into execution, must have been born, during the distractions of the civil wars, or amid the contests of the administration of Charles I.: and the gallant youth, who fought by the side of King William, must have first seen the light soon after the Restoration.

But, it ought here to be stated, as a circum-

flance, which may be supposed to have checked the progress of population, that there had been actually raised, though with some difficulty, on nearly seven millions of people, in thirteen years \* - £.58,698,688. 195. 8 d.:

If we average this fum by the number of years, we shall gain a pretty exact idea of King William's annual income - £.4,415,360:

And if from this we deduct King James's revenue - -

2,061,856:

The balance of augmentation will be £. 2,453,504.

The principal of the public debt on the 31st of December 1697

was - - - £. 21,515,743;

whereon was paid an annual interest

f. 1,246,376.

And, these facts shew how much more the people were burthened in the latter, than in the former, reign.

It has nevertheless been proved, that manufactures slourished in the mean time; that there was a great demand for labour; that the foreign traffic and navigation of England doubled, from the peace of Ryswick to the accession of Queen Anne. For, the re-coinage of the silver mean time produced an exhibitant effect on industry, in the same proportion as the debasement of the current

coin is always disadvantageous to the lower orders, and dishonourable to the state. The revival of public credit, after the peace of Ryswick, and the rising of the notes of the Bank of England to par, strengthened private considence, at the same time, that these causes invigorated our manufactures and our trade. And, the spirit of population was still more animated by the many acts of naturalization, which were readily passed, during every session, in the reign of William; and which clearly evince, how many industrious foreigners found shelter in England, from the persecution of countries, less tolerant and free.

G

### CHAP. V.

The War of Queen Anne.—The Strength of the Nation. — The Losses of Trade. — The Revival of Trade.—Complaints of its Decline.—The Laws of Queen Anne, for promoting the Commercial Interests of the Nation.—The Union.—Restections.

NEW war, still more bloody and glorious than the former, ensued on the accession of Queen Anne. All Europe either hated the imperiousness, or dreaded, at length, the power of Lewis XIV. But it was his "owning and declaring the pretended prince of Wales to be king of England, Scotland, and Ireland," which was the avowed cause of the hostilities of Great Britain against France; though private motives have generally more influence than public pretences. When her treasurer sat down to calculate the cost, he found resources in his own prudence. Her general saw armies and alliances rife out of his own genius for war and negotiation. And both estimated right. fince a favourable change had gradually taken place in the spirit, as well as in the abilities of the people.

If we inquire more minutely into the national strength, we shall find, that England and Wales now contained about - - 1,700,000 fighting men.

The Union with Scotland added to these about - 325,000

So the united kingdom contained - 2,025,000

But troops, without money to carry them to war, with all that foldiers require, are of little avail. And happy is it for this nation, at least, that there is a fuccessive rise in the accumulations of our wealth, in the same manner, as we have already seen, there is a continual progress in our population; owing to the various means, which individuals constantly use, to meliorate their own condition. There can be little doubt then, though Gregory King supposed the contrary, that the productive capital and annual gains of the people were greater, at the accession of Anne, than they had been, during the preceding reign \*, or in any former period.

Godol-

<sup>\*</sup> After so expensive a war just ended, says Anderson, it gave foreigners a high idea of the wealth and grandeur of England, to see two millions sterling subscribed for in three days, (by the new East India Company in 1698) and there were persons ready to subscribe as much more: For, although since

Godolphin and Marlborough had not to contend with the embarrassments of their immediate predecessors. The disorders of the coin, which had so enseebled the late administration, had been perfectly cured by the great re-coinage of the last reign. The high interest, which had been given, and the still higher profit, that was made, by purchasing government-securities, had drawn meanwhile much of the hoarded cash within the circle of commerce. No less than £. 3,400,000 of hammered money, which had been equally locked up, were brought into action, according to Davenant, by the act for suppressing it, in 1697. The Bank of England now lent its aid, by facilitating loans, and circulating exchequer bills. And the public debts and additional taxes filled circulation at prefent, and gave it activity; as they had equally produced fimilar effects, when the Long Parliament opened the coffers of England. Owing to all those causes, the statesimen of the reign of Anne borrowed money at five per cent. in 1702, and never gave more than fix, during the war; which alone shews how the condition of this country had happily changed, from the time that feven and eight per cent. were paid, only a few years before.

that time higher proofs have appeared of the great riches of this nation, because our wealth is very visibly increased; yet, till then, continues he, there had never been so illustrious an instance of England's opulence. [Chron. Com. vol. ii. p. 223.]

:

The principal of the public debt, on the 31st of December 1701, amounted to - £. 16,394,701; whereon was paid an annual interest

of 1,109,123.

The taxes yielded nett into the exchequer, during the year 1701 - £. 3,769,375.

Of this inconfiderable revenue the current fervices for the navy abforbed f. 1,046,397

\* £. 3,769,375.

The nett fums paid into the exchequer during the year 1703, from the customs, excise, post-office, land, and miscellaneous duties - f. 5,561,944:

\* Mr. Aftle's Transcript.

Of this fum there were issued for carrying on the war £.3,666,430

For paying the civil lift 589,981 the interest of loans 430,307

Balance remaining for the payment of loans, and other fervices -

The taxes, which were annually levied on the people, during the prefent reign, may be calculated from the nett fums paid into the exchequer in the years 1707-8-9-10, amounting yearly to £. 5,272,758. This gives us an idea fufficiently precise of the pecuniary powers, which could then be exerted by Britain. But the military operations of the government were more extensive than the annual supplies of the parliament: So that before Christmas 1711, unfunded debts were contracted to the amount of £, 9,471,325. This fum was then too large, as it is faid, to be borrowed at any rate. The public creditors agreed to convert their claims into a capital, at a specified interest, with charges of management. And here is the origin of the South Sea Company, and South Sea Stock, which, whatever help they now brought with them, in after times, were perverted to very distressful projects.

Mr. Aftle's Transcript.

The supplies granted, during the present reign, amounted to - £.69,815,457. 11s.  $3\frac{1}{2}d$ .

The expences of the war, as they were stated by the commissioners of public accounts, amounted to - - -  $\pounds$ .65,853,799. 8s.  $7\frac{1}{2}d$ .\*

And the national debt swelled, before the 31st December 1714, to -  $\pounds$ .50,644,306. 13s.  $6\frac{1}{4}d$ .; on which was paid an interest of  $\dagger$   $\pounds$ .2,811,903. 10s.  $5\frac{1}{2}d$ . and which were all more than counterbalanced by the legislative encouragements, that were given, in this reign, to domestic industry and foreign trade.

The furplus produce of our land and labour, which was yearly exported, had mean time rifen to £.6,045,432; a circumstance, which equally evinces, that we had not yet much to spare, and consequently no vast remittance, which could be annually sent abroad for carrying on the war.

The tonnage of English ships, which, from time to time, transported this cargo, and which, at that epoch, formed the principal nursery for the royal navy, had increased to - 273,693 tons; this shipping must have been navigated, if we allow twelve men to every two hundred tons, by - 16,422 sailors.

By an enumeration ‡ of the trading vessels of England, in January 1701, it appeared, that

<sup>\*</sup> Camp. Pol. Survey, vol. ii. p. 543.

<sup>†</sup> Hist. of Debt, p. 80; which gives a particular statement.

<sup>1</sup> A detail in the Plantation-office.

London had - - 84,882 tons, The out-ports had 176,340

that they were navigated by 16,471 men, and 120 boys, or 16,591 failors.

The inconfiderable difference between the enumerated tonnage and mariners, and the tonnage and mariners cleared at the cuftom house, only marks, that several ships had entered more than once, and that a greater number of men were then allowed to every vessel than there are now; whence we may infer, that the calculation and the enumeration prove the accuracy of each other.

Such then was the augmented strength of the nation under Queen Anne. Let us now enquire into the losses of our trade, during her glorious, but unproductive, war.

The effort of the belligerent powers was made chiefly by land; and the foreign trade of England feems to have rather languished, than to have been overpowered, as it had been, for a feafon, during the preceding contest. Let us examine the following proofs:

Years.	Ships cl	eared outwards		Value of cargoes.
17007	Tons English.	Do foreign.	Total.	£.
1	273,693 -	43,635 -	317,328	£. * - 6,045,432
1705	Commence of the last of the la			5,308,966
1709				- 5,913,357
1711				- 5,962,988
1712	326,620 -	29,115 -	355,735	- 6,868,840
	-		-	(Annual State of Stat

<sup>\*</sup> Philips's State of the Nation, p. 35.

The revenue of the post-office \*, on an average of the four last years of William, yielded nett — £.82,319

Ditto of the four first years of the war - 61,568

Thus, the year 1705 marked the lowest stage of the depression of commerce, during Queen Anne's wars; whence it gradually rose till 1712, the last year of hostilities, when our navigation and traffic had gained a manifest superiority over those of any former period of peace.

Let us behold the rebound of this mighty fpring, when the return of tranquillity had removed every pressure, by contrasting the average of the ships cleared outwards, and of the value of their cargoes, during the three peaceful years preceding the war, with both, during the three years immediately following the treaty of Utrecht.

\* Mr. Aille's Transcript.

The nett annual revenue \* of the postoffice, according to an average of the
years 1707—8—9—10 — £.58,052

Ditto on an average † of the years
1711—12—13—14 — 90,223

At the moment of this marvellous advance in manufactures, traffic, and industry, the people were taught to believe, that these blessings scarcely existed among them. "Our trade," said Mr. William Wood to King George I. ‡ "was then expiring; our foreign commerce, in many parts, entirely lost, and in general suspended; what little was left us, was become too precarious to be called ours." And, in the encomiastic style of his dedication, he attributed our regeneration from "the lost condition our trade was then in, to his Majesty's timely accession." The ministers of this monarch did little honour to themselves, by in-

## \* Mr. Astle's Transcript.

<sup>+</sup> And. Chron. Com. vol. ii. p. 266; But, the office had been now extended to every dominion of the crown, and the rates of postage augmented one-third from 1710. The post-office revenue, says Anderson, is a kind of politico-commercial pulse of a nation's prosperity or decline.

<sup>†</sup> Wood's Dedication of The Survey of Trade. This was not the same William Wood, who obtained the patent for coining Irish halfpence, which procured him so much celebration by Swift; but it was the William Wood, who was afterwards appointed to the office of Secretary to the Commissioners of the Customs.

citing all that clamour, or by propagating so much factious salsehood. It was not the peace of Utrecht, which promoted the unexampled prosperity of our commercial affairs; but, it was peace. Yet, said Archibald Hutchinson, in 1720, It is too well known, and a sad truth it is, that the balance of trade has been for some time against us. The cause why declamations prevail so greatly, said Hooker, is, for that men suffer themselves to be deluded.

The public revenue had now been divided into the established income, as the inland duties, the excife, and the customs; and into annual grants, as the malt, and the land, taxes. The inland duties. confisting at the demise of the Queen of fifteen diffinet heads, were all managed by diffinet commissioners, and may be estimated at the yearly amount of f. 453,002, from an average of the years 1707-8-9-10. The excise, properly so called, and collected under the peculiar management of the commissioners of excise, consisted of twenty-seven different articles, and may be calculated, from the same average, at f. 1,629,245, including the duty on malt. And we may thence determine how much it may have obstructed labour, and checked the progress of population. The nett customs, arising from our imports and exports, confisted then of forty-one different branches, and may be calculated from a fifteen years average, from 1700 to 1714 inclusive, to have amounted to f. 1,352,764 \*.

<sup>\*</sup> Philip's State of the Nation, p. 26.

Having enumerated "that fad detail of taxes," the historian of our debts exclaims: " Can we wonder at the decay of our commerce, under fuch circumstances? Should not we rather wonder that we have any left?" But, what regard is there due to a general inference, in opposition to authentic facts? It has been already demonstrated, that in no former effluxion of time did the manufactures and trade of England flourish so much, or amount to so large an extent, as at the demise of Queen Anne, notwithstanding the greatness of our imposts, and the immensity of our debts. And, when we consider too, that the taxes had produced abundantly, we may from these decisive circumstances certainly conclude, that the war had little incommoded the industrious classes; and that the principle of procreation exerted its powers, while an attentive diligence preserved a numerous progeny, by furnishing the constant means of subfistence, while there was a vast export of corn, owing to its cheapnels at home.

Whoever examines the laws of Queen Anne, with a view to this subject, must be of opinion, that they all tended to promote the commercial interests, and local improvements, of the nation, as such interests were then understood. In this reign, there were acts of Parliament passed,

For encouraging shipping and foreign trade	-	17
For promoting manufactures -	-	5
For roads, churches, bridges, and paving	~	26
For piers, harbours, &c		10
For inclosures, and agricultural improvement	nts	8
For the management of the poor -		5
8		- 17
For all these useful purposes	•	71

But, the union of the two kingdoms is the glory, and ought to be the boast of her reign. The incorporation of two independent legislatures has proved equally advantageous to both countries, whether we regard the interest of the state, or the happiness of the governed. When we confider the weakness, which resulted from the ancient inroads of the Scotch, and the danger of future feparation, we must allow, that this conjunction was worth to England almost any price. And the compression of the hearts and hands of two divided nations, gave an elasticity and vigour to the united kingdoms, which feparately neither had ever attained. If as communities fo much strength and felicity were derived from the Union, the Scottish people, as individuals at least, were still greater gainers from this affociation of interests and affections. Freed from the tyranny of the nobles, by being admitted into a political system more liberal than their own, the people of Scotland thenceforth enjoyed the same privileges, as similar ranks in England had long derived from fortunate events,

or wise institutions. And, invested with the same benefits of commerce, the Scotch meliorated their agriculture, improved their manufactures, extended their trade, and acquired an opulence, which, as a people, separate and overshadowed, they had not for ages accomplished. The acquisitions of both happily proved advantageous to each. And while the Enplish busily cultivated the peculiar arts of peace, the Scotch were brought, by a wise policy, from their mountains, the natural nursery of warriors, to fight the national battles of both.

From the epoch of the Union, the same salutary regulations promoted equally the prosperity and populousness of Great Britain. Among these Anderson \* has recorded the useful revisal, in 1710, of the ancient assize of bread and ale [1266]; because "it was so necessary for our labourers and artificers, as well as for all other people." Whatever number of lives were lost during the wars of William and Anne, it seems certain, says that industrious complier, "that the artificers of England did irreparable damage in the mean time to the French, by robbing them of many of their best manufactures, wherewith they had before supplied almost all Europe."

The foregoing details cast a just censure on the surious party-contests, during the last years of Queen Anne, in respect to the condition of our commerce; as if the prosperity, or the ruin of

<sup>\*</sup> Chron. Com. vol. ii. p. 251.

manufactories and trade, were influenced by the continuance of statesmen in the possession of emolument, or in the expectation of power. The husbandman and the failor only look for employment, the mechanic and the merchant only inquire for customers, without caring who are their rulers, since they feldom gain from the contests of the great, and certainly know, that they enjoy protection from the administration of justice, and from the operation of law.

## CHAP. VI.

Foreign Disputes of George I.—The State of the Nation.—Observations.—The Progress of Commerce and Shipping.—Complaints of a Decline of Trade.
—Industry and Traffic encouraged.—Remarks.

WHILE George I. who ascended the throne, in 1714, was, in secret, little anxious about the enjoyment of his crown, amid the clash of domestic parties, he engaged successively in contests with almost every European power, because each, in its turn, had given protection to the Pretender to his rights.

But, the foreign disputes of this reign were short, as well as unexpensive. And they did not, therefore, call forth the whole force of the kingdom; which may be deduced in the following manner.

If the current of population continued its progress, as we have seen it did to the commencement of the present reign, the fighting men must necessarily have amounted, during the time of George I. to two millions and fifty thousand. And the effective wealth of the country, there is reason to think, had accumulated mean while in a still greater proportion; from preceding encouragements, and the augmentation of capitals.

Owing to the encrease of circulation, which enables the opulent to convert fo eafily land into coin, or coin into land, and to the accumulation too of moveable property, the interest of money began to fall towards the end of King William's reign, when no great balance of trade flowed into the kingdom. And the natural interest continuing low, even amid the pressures of the subsequent war, the Parliament enacted, in 1713, that the legal interest should not rife higher than five per cent. after September 1714. Thus England, while she was yet embarrassed with the never-failing consequences of war, gained "that abatement of interest by law," which Sir Josiah Child rather too fondly infifted, during the preceding age, would produce fo many benefits to his country: The advance of the price of lands in the purchase; the improvement of the rent of farms; the employment of the poor; the multiplication of artificers; the increase of foreign trade; and the augmentation of the focks of people. The natural interest of money fell to three per cent. in the reign of George I. while the government feldom borrowed at more than four.

The practice of borrowing on behalf of the state had commenced with the pressures of King William's reign. This policy was continued, and extended, during the wars of Anne. But, in the time of her successor, the contract, between the government and the lenders, was not so much made, as in preceding times, for the re-payment

of the principal, as for an annuity instead of interest.

The nation had thus contracted a debt, before the 31st of December 1714, of - £.50,644,307;

pay the interest of which required, from the land and labour of this kingdom, yearly, - £.2,811,904.

It ought to be remembered, however, that this debt was due by the nation in its collective capacity; but, that individual creditors had acquired a vast capital in it, of the more importance to them and the public; as, befides yielding an annual profit, it was equally commodious as coin, for all the uses of life; fince it could be easily pledged, or transferred. And land-owners were thereby enabled to improve their estates, manufacturers to carry on their business, traders to extend our commerce, and every one to pay their taxes. If by this debt, and by this annuity, the state was somewhat embarrassed, the industrious classes derived, probably, some advantage, from the active motion, which was thereby given to the circulating value of all things. Yet, if the people received no positive benefit, they were at least enabled, by this facility, to fustain actual burdens with greater eafe.

While taxes were, without rigour, collected from annual income, and not from productive capital,

pital, a financial operation was performed, in 1716, which gradually relieved the embarrassments of the state, and gave fresh vigour to circulation, that energetic principle of commercial times. All those taxes, which had from time to time been granted for the payment of various annuities, were at once made perpetual, and directed to be paid into three great funds. The interest of the public debts was reduced from six per cent. to sive. And whatever surpluses might remain, after paying this liquidated interest, were ordered to be thrown into a fourth sund, which was thenceforth called the sinking fund, because it was designed to pay off the principal and interest of such debts as had been contracted before Christmas 1716.

So productive were the taxes, owing to the prosperity of the people, that these surpluses amounted, before the end of the reign of George I. to £.1,083,190\*. And these surpluses would have made the country still more prosperous, had the sinking sund been constantly applied, as it was thus originally designed; by keeping circulation sull and overslowing, and thereby preventing what is commonly deplored as a scarcity of money.

Notwithstanding that salutary operation, and our manufactures and trade were at the same time greatly encouraged, the capital of the public debts amounted to nearly as much at the demise of

<sup>\*</sup> Exchequer account, in the History of Debts.

George I. as it had been at his accession, though the annuity, payable on them, was by those means somewhat reduced; as appears by the following statement: The principal of the national debt was, on the

31st of December 1714 - £.53,681,076; the interest thereon £.2,811,904.
Do on 31st Dec. 1727 - 52,092,235;
Ditto - 2,363,564.

The intermediate diminution

£.1,588,841

£.448,340

We shall however gain a more adequate notion not only of the public revenue and burdens, but of the resources of the nation, from the following detail:

The nett excise, according to a medium of four years, ending at Michaelmas 1726 (exclusive of the malt-tax) -- f.. 1,927,354 The nett annual customs - 1,530,361 Various and promiscuous internal taxes 666,459 Total appropriated -f. 4, 124, 174 The land-tax at 25. in the pound is given for £.1,000,000 Malt - duty brings in £.680,000, but is given for 750,000 Raifed by lottery -750,000 Total annual grants for current fervices 2,500,000 Nett annual revenue - £.6,624,175 Charges of collection - 600,000

The gross sum raised yearly on the people - - £.7,224,175

The public expenditure was as follows:

Interest of a debt of £.50,793,555\*, including the surplus of the civil list, which is £.3,678 per annum,

£.2,240,985
The civil lift - 800,000

Surplus of the finking fund - 1,083,190
The current fervices of the army, navy, &c. - - - 2,500,000
The annual charges with current fervices - - - 6,624,175
Salaries and other charges, at leaft 600,000

Gross sum annually applied - £.7,224,175

The value of the furplus products of the land and labour of England, after domestic consumption was fully supplied, amounted yearly, at the accession of George I. to £.8,008,068; which

<sup>\*</sup> But, according to James Postlethwayt's History of the Public Revenue, the national debt, on the 31st of December, 1726, was £.52,771,005; whereon was paid an annuity of £.2,562,217.

formed a much larger cargo than had ever been exported before. And from this circumstance we might infer, that there was now employed a greater capital in trade than, by means of its productive employment, had, in any prior age, promoted the wealth and greatness of Britain.

The English shipping, which exported that vast cargo, at the accession of George I. had then increased to - - - 444,843 tons; which must have been navigated, if we allow twelve mariners to

every two hundred tons, by - 26,691 men.

The royal navy, which had been principally left by Queen Anne, carried in 1715

167,596 tons.

Wood stated \* the amount of the navy, in 1721, at - - -

158,233 tons:

which, faid he, is more than in 1688, by 57,201 tons;

and more

than in 1660, by 95,639.

Notwithstanding the boasts of Wood, and the glory acquired by defeating the Spanish fleet, in 1718, it is apparent, that the navy had lately sustained a diminution of

9,363 tons.

\* Survey of Trade, p. 55. H 4

Having

Having faid thus much with regard to the strength of Britain, let us now examine the losses of our trade, from the petty wars of the present reign; which seem not indeed to have much interrupted the foreign commerce of the kingdom, while salutary regulations excited the domestic industry of the people.

Owing probably to a complication of causes, the traffic and navigation of England appear to have struggled with their oppressions, during this reign, but never to have risen much superior to the amount of both, in the year of the accession of George I. The following details offer sufficient proofs of the truth of this representation:

	Value of cargoes,	
Years.	Tons English. Do foreign. Total.	£.
1714	444,843 - 33,950 - 478,793	- 8,008,068
15	406,392 - 19,508 - 425,900	- 6,922,263
16	438,816 - 17,493 - 456,309	- 7,049,992
		Super-
1718	427,962 - 16,809 - 444,771	- 6,361,396
23	392,643 - 27,040 - 419,683	- 7,395,908

We shall see however a progress, if we contrast the averages of our navigation and trade, at the beginning and at the end of George I's reign; and if we also recollect, that the business of 1726 and 1727 was somewhat interrupted by war, or by preparations for war,

During this progress there were, however, "a general complaint and concern of the nation, on the subject of a decline of trade\*." Joshua Gee published, in 1729, his treatise, which, in order "to thew the wounds our commerce and manufactories had received, he put into the hands of the ministers. of the King, the Queen, and the Prince †." When Erasmus Philips wrote his State of the Nation, in 1725 t, he found "fome men fo gloomy, that they thought us in a worfe condition than we really are, and that it would be impossible to pay off the public debts; fince all this pomp is nothing but false luftre; as we owe more than we are worth: as our money is diminished; and as we have little left but paper-credit." Against this contemporaneous declamation, which shews that man, in every age, utters his lamentations in a similar tone, Philips stated, what experience has shewn to have been undoubtedly true, the certain proofs of the

<sup>\*</sup> Wood's Survey.

<sup>+</sup> Gee's Dedication.

<sup>†</sup> Preface to The State of the Nation; which, as well as Wood's Survey, was dedicated to the King, according to the practice of the times.

prosperity and opulence of a country; great numbers of industrious people; a rich commonalty; money at low interest; and land at a great value.

Nevertheless, there were assuredly events, during the reign of George I. which cast a gloom over the nation, and obstructed general prosperity. The perfecutions of the great, on the accession of a new family, which were followed by the tumults of the mean, ought to give a lesson of moderation: fince they were attended with no good confequences to the state. The subsequent rebellion of 1715 brought with it a twelvemonth of distraction, without leaving the terrors of example. And the war with Spain, in 1718, obstructed our Mediterranean commerce, as every war with that kingdom must continue to do, while Gibraltar, the great cause of hostilities, remains, and bids the Spaniards defiance. But, it was the infamous year 1720, which diverted all classes to projects and bubbles, that ought to be blotted from our annals, if they did not form remarkable beacons to direct our future course.

Of this reign it is the characteristic, that though in no period were there so many laws enacted, for promoting domestic and foreign trade, yet, at no time did both prosper less, during those days of captious peace, rather than avowed hostilites. The treaty of commerce with Spain, in 1715, must have inspired our traders with fresh vigour. The law which, in 1718, prohibited any British subject from carrying on traffic to the East under

foreign

foreign commissions, turned their ardour upon more invigorating objects, by preventing productive capital from being sent abroad. The measure of allowing the exportation of British-made linen, duty-free, in 1717, gave us a manufacture, which is said, even then, to have employed many thousands of the poor. And the sisheries were encouraged by bounties, which must have multiplied the important race of our mariners.

The falutary laws, which were made for inciting domestic industry, were doubtless more efficacious in the subsequent reign, than they were felt, in any great degree, during the present. The manufactories of iron, of brass, and of copper, being considered as the third in extent, since they employed, as it is said, in 1719, two hundred and thirty thousand persons, were promoted with the attention, which was due to their importance. The continued encouragement, that had been given to the fabrics of silk, and the erection of the vast machine of Lomb, in 1719, had raised the annual value of this manufacture to £.700,000, in 1722, more, as it is stated, than it had yielded at the Revolution.

But, the year 1722 must always form an epoch, as memorable for a great operation in commercial policy, as the establishment of the sinking sund had been in sinance, a few years before. The Parliament had indeed, in 1672, withdrawn the duties, which were then payable by aliens, on the exportation of our own manufactures. This salutary principle

principle was still more extended, in 1700, by removing the imposts on every kind of woollen goods, that should be thereafter sent abroad. It was however by the law for the further encouragement of manufactures, that every one was allowed to export duty-free all merchandizes, the produce of Great Britain, except only such articles, as should be deemed materials of manufacture; while drugs, and other goods used for dying, were equally permitted to be imported duty-free. And other facilities were at the same time given to trade, whilst the fisheries were promoted by bounties.

After enumerating all preceding measures of encouragement, Anderson\* remarks, in 1727, that nothing can more obviously demonstrate the amazing increase of England's commerce, in less than two centuries past, than the great growth of its manusacturing towns, such as Liverpool, Manchester, Birmingham, and others; which are still increasing in wealth, people, business, and buildings. Yet, Lord Molesworth † complained, in 1721, "that we are not one-third peopled, and our stock of men daily decreases through our wars, plantations, and sea-voyages." His lordship was arguing, when he made this observation, for a general naturalization, a policy of very doubtful merit, because in all sudden change there

<sup>#</sup> Chron. Com. vol. ii. p. 314.

<sup>†</sup> Pref. to his translation of Hottoman's Franco-Gallia, 2d edit. p. 23-4.

is confiderable inconvenience; and he may have therefore been biaffed by his principle. If this nobleman intended to add his testimony to an apparent fact, that he saw no labourers to hire, his evidence would only prove, that the industrious classes were fully employed; and employment never fails to promote population. If his lordship only meant to give vent to his laudable anxieties for his country, this circumstance would lead us to infer, that great as well as little minds are too apt to complain of the miseries of the present.

When we our betters fee bearing our woes, We fearcely think our milities our foes.

## CHAP. VII.

The State of the Nation at the Accession of George II.—
Remarks thereon.—The Increase of Trade and Shipping.—Complaints of their Decline.—Reslections.—
Our Strength when War began in 1739.—Our
Trade and Shipping during the War.—The Prosperity of both at the Restoration of Peace.—Complaints of Decline.—Remarks.

HE reign of George II. with whatever finister events it opened, will be found to have promoted greatly, before its successful end, the industry and productive capital of the nation; and consequently, the efficient numbers of the people, by the means of augmented employments.

He found his kingdom burdened with a funded debt of rather more than fifty millions; which required annually, from the land and labour of the nation, taxes to the amount of two millions and

upwards, to pay the creditor's annuity.

But, as his predeceffor reduced, ten years before, the interest payable on the public debts, from fix per cent. to five, the administration of the present King made a further reduction, with the consent of all parties, from five per cent. to four, in 1727. These measures, which the fortunate circumstances

of the times rendered eafy and fafe, not only strengthened public and private credit, but, by reducing the natural interest of money still more, must have thereby facilitated every operation of domestic manufactures, as well as every effort of foreign traffic. The fabrics of wool were at the same time freed from fraud. And the peace with Spain, in 1728, must have invigorated our exportations to the Mediterranean; the more, as a truce was then also made with Morocco.

Yet, party-rage ran so high, in 1729, says Anderson\*, that the friends of the minister sound themselves obliged to prove by fasts, what was before generally known to be true, that Britain was then in a thriving condition: the low interest of money, said they, demonstrates a greater plenty of cash than formerly; this abundance of money has raised the price of lands from twenty and twenty-one years purchase to twenty and twenty-five; an advance, which proves, that there were more persons able and ready to buy than formerly:—And the great sums, which were of late expended in the inclosing and improving of lands,

<sup>\*</sup> Chron. Com. vol. ii. p. 322.—The cause of the abovementioned party-rage is now sufficiently known. Sir Spencer Compton outwitted himself in the bargain for place, about Queen Caroline's jointure. Sir R. Walpole did not higgle with her Majesty about a hundred thousand pounds: and he was, in return, continued the minister. But, the prosperity of the people is no wise connected with the interested contests among the great.

and in opening mines, are proofs of an augmentation of opulence and people; while the increased value of our exports shews an increase of manufactures; at the same time that the greater number of shipping, which were cleared outwards, marks the wider extent of our navigation.

If we compare the averages of our vessels and cargoes, in the first years of the present reign, with those of the three years of peace, which preceded the war of 1739, we shall see all those truths in a still more pleasing light.

It was at this moment of unexampled prospefity, that the elder Lord Lyttelton wrote Confiderations on the present State of Affairs, (1738). "In most parts of England," says he, "gentlemen's rents are so ill paid, and the weight of taxes lies so heavy upon them, that those, who have nothing from the Court, can scarce support their families.—Such is the state of our manufactures, such is that of our colonies; both should be enquired into, that the nation may know, whether the former can support themselves much longer under their various pressures." The editor of his lordship's works would have done no differvice to the memory of a worthy man, had he configned this factious effusion to anonymous obscurity. Animated by a congenial spirit, Pope too wrote Considerations on the State of Affairs: in his two dialogues, entitled THIRTY-EIGHT, he represents, in most energetic language, and exquisite numbers, the nation as totally ruined; as overwhelmed with corruption:

"See thronging millions to the Pagod run, And offer country, parent, wife, or fon! Hear her bleak trumpet through the land proclaim, That not to be corrupted is the shame.

It was about the same time also, that William Richardson composed his essay "On the Causes of the Decline of Foreign Trade." But, it is not easy to conceive, that any disquisition can be more deprayed, than a treatise to explain the causes of an effect, which did not exist.

It was the evident purpose of some of those writers to drive the nation headlong into war, without thinking of any other consequences, than acquiring power, or gratifying spleen; and without caring how much a people, represented as unable to pay their rents, might be burthened with taxes; or a country, painted as seeble from dissipation, might be difgraced, or conquered.

If the nation had thus prospered in her affairs, and the people thus increased in their numbers, Great Britain must have contained, when she was

factiously forced into war with Spain, a greater number of fighting men than had ever fought her battles before. And she must have possessed a mass of productive capital, and a greatness of annual income, far superior to those of former years.

The course of circulation had filled, and even overslowed. The natural interest of money ransseadily at three per cent. The price of all the public securities had risen so much higher than they had been in any other period, that the three per cent. stocks fold at a premium on "Change \*. And the annual surpluses of the standing taxes, as they were paid into the sinking-sund, amounted in 17,38, to no less a sum than f. 1,231,127.

Of this fund it has been very properly observed, that while it contributes to the liquidation of former debts, it still more facilitates the contracting of new ones. But, the great contest among the public creditors at that fortunate epoch, was not so much who should be paid his capital, as who should be suffered to remain the creditors of the state †. How much of the public debts had been paid, during the last ten years, and how much still remained as a burden on the state, will appear from the following detail:

<sup>\*</sup> Sir J. Barnard's speech for the reduction of interest ...

The value of the surplus produce of our land and labour, which were then exported; amounted yearly to £.9,993;232; and which might have been applied; when sent to foreign countries; as remittances for carrying on the war at the greatest distance. It is indeed an acknowledged fact; that during no effluxion of time was there ever such considerable balances paid to England, as there were transmitted; in the course of the war of 1739, on the general state of her payments.

The English shipping; which actually transported that vast cargo of £.9,993,232, amounted annually to 476,941 tons; which were navigated probably by 26,616 men, who might have been all engaged in the public service, either by influence.

ence, or force:

There had mean while been an equal progress in the augmentation of the royal navy; which carried

in	1749			228,215*

Thus much being premised, as to the state of our strength, we shall gain a sufficient knowledge of the condition of our navigation and commerce,

\* An admiralty-list, in the Paper-office, gives us the following detail of the King's ships in sea-pay, on the 19th July 1738.

Ships.

Stationed in the Plantations - 24 carrying 5,045 men,
in the Mediterranean, 17 - - 5,011
at Newfoundland, 3 - - 690

Ordered home, - - 4 - - 720

On the Irish coast, - - 6 - - 550

At home, - - - 41 - - 9,602

By preparations for a naval war, the foregoing lift had been fwelled, before March 1739, to 147 ships, carrying 38,849 men. But their numbers were defective, in 4,758 borne, and in 8,618 mustered.—From the same authority, we have the following abstract of the royal navy in June 1748; which, when compared with the list of 1738, gives us an idea sufficiently precise of the fleet of England, during the war of 1739.

242; whose complement of

men was 60,654.

during the war of 1739, by attending to the subjoined detail of our mercantile shipping and cargoes:

Thus the year 1744 marked the ultimate point of commercial depression, if we may judge from the tonnage; and 1742, if we draw our inference from the value of exports: Yet, whether we argue from the one year, or from the other, we must conclude, that the interest of merchants was little injured, if it were not promoted, by this naval war.

But, we shall at once see how little our industrious classes had been oppressed by the war, at home, and with what elasticity the spring of foreign trade rebounded on the removal of warfare, by comparing the averages of our navigation and I 3 commerce,

commerce, during the peaceful years, before hostilities began, and after they ended:

During the foregoing fifty years of uncommon prosperity, as to our agriculture \* and manusacture, our navigation, and traffic, and credit, the incumbrances of the public, and the burdens of the people, equally continued to increase. The debt, which was left at the demise of Queen Anne, remained undiminished in its capital at the demise of George I. though the annuity payable on it had been lessened almost a million. The ten

\* It appears, by an account laid before the Parliament, that there had been exported in five years, from 1744 to 1748, corn from England to the amount of 3,768,444 quarters: which, at a medium of prices, was worth to this nation, £,3,007,948. Now, the average of the five years is 753,689 quarters yearly, of the value of £,1,601,589. The exportation of 1749 and 1750 rose still higher. "This is an immense sum," says the compiler of the Annual Register, [1772, p. 197] "to slow immediately from the produce of the earth, and the labour of the people; enriching our merchants, and increasing an invaluable breed of seamen." He might have added, with equal propriety, enriching our yeomany, and increasing the useful breed of labourers dependant on them.

years of subsequent peace having made little alteration, the public debt amounted, on the 31st of December 1738, to - £.46,661,767 on the 31st of December 1749,

to - - - \* 74,221,686

—whence we perceive, by an eafy calculation, that an additional debt had been mean while incurred, of £.27,559,919, besides unfunded debts to a considerable amount. But, the nine years war of 1739 cost this nation upwards of fixty-four millions, without gaining any object; because no valuable object can be gained by the generality of wars, which, as they often commence without adequate cause, end usually without much deliberation. It is to be lamented, when hostilities cease, that the party, which forces the nation to begin them, without real provocation, is not compelled to pay the expence.

The current of wealth, which had flowed into the nation, during the obstructions of war, continued a still more rapid course, on the return of peace. The taxes produced abundantly, because an industrious people were able to consume liberally. And the surpluses of all the imposts, after paying the interest of debts, amounted to £. 1,274,172†. The coffers of the rich began to

<sup>\*</sup> History of Debts, and J. Postlethwayt's History of the Public Revenue.

<sup>†</sup> History of Debts from an Exchequer account.

overflow. Circulation became still more rapid. The interest of money, which had risen during the pressures of war to sour per cent. sell to three, when the cessation of hostilities terminated the loans to government. The administration seized this prosperous moment to reduce, with the consent of the proprietors, the interest of almost sisty-eight million of debts from sour per cent. to three and a half, during seven years, from 1750, and afterwards to three per cent. for ever. And by these prudent measures, the annuity payable to the creditors of the state was lessened, in the years 1750 and 1751, from £. 2,966,000 to £. 2,663,000\*.

It was at this fortunate epoch, that Lord Bolingbroke wrote Some Considerations on the State of the Nation; in which he represents the public as on the verge of bankruptcy, and the people as ready to fall into confusion, from their distress and danger. Little did that illustrious party-man know, at least little was he willing to own, how much both the public and the people had advanced, from the time when he had been driven from power, in all that can make a nation prosperous and great. Doddington at the fame time-" faw the country in fo dangerous a condition, and found himself fo incapable to give it relieft,"-that he refigned a lucrative office from pure difinterestedness. And the second edition of Richardson's Essay on the Causes of the Decline of Foreign Trade, was oppor-

<sup>\*</sup> J. Postlethwayt's History of the Revenue, p. 238.

<sup>†</sup> Diary, March 1749-50, &c.

tunely published, with additional arguments, in 1750, to evince to the world the causes of an effect, that did not exist.

State and wealth, the business, and the crowd, Seem, at this distance, but a darker cloud; And are to him who rightly things esteems, No other in effect than what it seems.

Notwithstanding all that apparent prosperity and augmentation of numbers, we ought to mention, as circumstances, which probably may have retarded the progress of population, the Spanish war of 1727, that was not, however, of long continuance. The fettlement of Georgia, in 1733, carried off a few of the lowest orders, the idle, and the needy. The real hostilities, that began in 1730, were probably attended with much more baneful confequences. The rebellion of 1745 introduced a temporary diforder, though there were drawn from its confusions, measures the most salutary, in respect to industry, and population. "Let the country gentlemen," fays Corbyn Morris, when speaking on the then mortality of London [March 1750-1] " be called forth and declare-Have they not continually felt, for many years past, an increasing want of husbandmen and day-labourers? Have the farmers throughout the kingdom no just complaints of the excessive increasing prices of workmen, and of the impossibility of procuring a sufficient number at any price?"

Now, admitting the truth of these pregnant affirmations, they may be shewn to have been altogether

gether confistent with facts, and with principles. Allowing his many years to reach to the demife of George I. it may be afferted, because it has been proved, that our agriculture had been fo much improved, as not only to supply domestic wants, but even to furnish other nations with the means of subsistence; and that every branch of our manufactures had kept pace with the flourishing flate of our husbandry. It is furely demonstrable, that it required a greater number of artificers to manufacture commodities of the value of f. 11,141,202, and to navigate 554,713 tons of shipping, in 1748, than to fabricate goods of the value of f. 7,951,772, and to navigate 456,483 tons of shipping, in 1728. But, great demand creates a fcarcity of all things; which in the end procures an abundant supply. And, that the excessive prices of workmen did in fact produce a sufficient reinforcement of workmen, may be inferred from the numbers which, in no long period, were brought into action, by public and private encouragement.

We fee in familiar life, that when money is expended upon works of uncommon magnitude, in any village, or parifh, labourers are always collected, in proportion to the augmentation of employments. Experience shews, that the same increase of the industrious classes never fails to ensue in larger districts; in a town, a county, or a kingdom, when proportional sums are expended for labour. And it is in this manner, that manufactures and trade every where augment the numbers

of mankind, by the active expenditure of productive capitals. He, then, who labours to evince, that the lower orders of men decrease in numbers, while agriculture, the arts (both useful and ornamental) with commerce, are advancing from inconsiderable beginnings, to unexampled greatness, is only diligent to prove, That causes do not produce their effects:

As women, who yet apprehend Some fudden cause of causeless fear, Although that feeming cause take end, A shaking through their limbs still find.

To those reasons of prosperity, that, having for years existed, had thus produced the most beneficial effects, prior to the peace of Aix-la-Chapelle, new encouragements were immediately added. The reduction of the interest of the national debts, by measures altogether consistent with justice and public faith, shewed not only the flourishing condition of the kingdom, but also tended to make it flourish still more. And there necessarily followed all those salutary consequences, in respect to domestic diligence, and foreign commerce, which, Sir Josiah Child had insisted a century before, would result from the lowness of interest.

An additional incitement was at the same time given to the whale-fishery, partly by the naturalization of skilful foreigners, but more by pecuniary bounties. The establishment of the corporation of The Free British Fishery, in 1750, must have pro-

5

moted population, by giving employment to the industrious classes, however unprofitable the project may have been to the undertakers, whose success was unhappily so unequal to their good intentions and unrecompensed expences. The voluntary society, which was entered into in 1754, for the Encouragement of Arts, Manufactures, and Commerce, must have been attended with still more beneficial effects, by animating the spirit of experiment and perseverance. And the laws, which were successively enacted, and measures pursued, from 1732 to 1760, for preventing the excessive use of spirituous liquors, must have promoted populousness, by preserving the health, and inciting the diligence, of the lower orders of the people.

Yet, these statutes, salutary as they must have been, did not promote the health and numbers of the people, in a more eminent degree, than the laws, which were paffed, during the fame period, for making more easy communications by the improvement of roads. We may judge of the necesfity of these acts of legislation from the penalties annexed to them. Of the founderous condition of the roads of England, while they were amended by the compulsive labour of the poor, we may judge indeed from the wretched state of the ways which, in the prefent times, are kept in repair by the ancient mode. Turnpikes, which we faw first introduced, foon after the Restoration, were erected flowly, in opposition to the prejudices of the people. The act, which for a time made it felony, at the beginning

beginning of the reign of George II. to pull down a toll-gate, was continued as a perpetual law, before the conclusion of it. Yet, the great roads of England remained almost in their ancient condition, even as late as 1752 and 1754, when the traveller seldom saw a turnpike for two hundred miles, after leaving the vicinity of London\*. And we now know from experience how much the making of highways and bridges advances the population of any country, by extending correspondence, by facilitating communications, and, consequently, by promoting internal traffic, which was thereby rendered greater than our foreign; since the best customers of Britain are the people of Britain.

<sup>\*</sup> See the Gentleman's Magazine 1752-54.

## CHAP. VIII.

A captious Peace produced a new War.—The Refources of Britain.—Trade prospers amidst Hostilities.—Its Amount at the Peace of 1763.—Remarks.

FTER a captious peace of very short duration, the slames of war, which for several years had burnt unseen among the American woods, broke out at length in 1755. Unfortunate as these hostilities were at the beginning, they yet proved successful in the end, owing to causes, which it is the province of history to explain.

However fashionable it then was for discontented statesimen to talk \* of the consuming condition of the country, it might have been inferred beforehand, that we had prodigious resources, if the ruling powers had been animated by any genius. The deseats, which plainly followed from misconduct, naturally brought talents of every kind into action. And the events of the war of 1756 convinced the world, notwithstanding every estimate of the manners and principles of the times, that the strength of Great Britain is irresistible, when it is

<sup>\*</sup> See Doddington's Diary, 1755-6-7.

conducted with fecreey and difpatch, with wisdom and energy.

When Brackenridge was upbraided by Foster, for making public degrading accounts of our population, at the commencement of the war of 1755, he asked, justly enough, "What encouragement can it give to the enemy to know, that we have two millions of fighting men in our British islands?" But we had assuredly in our British islands a million more than Brackenridge unwillingly allowed.

The numbers and spirit of our people were amply supported by the augmented resources of the nation. The natural interest of money, which had been 3 per cent. at the beginning of this reign, never rose higher than f. 3. 13s. 6d. at the condulion of it, after an expensive course of eight years hostilities. During the two first years of the war, the ministers borrowed money at 3 per cent. But, five millions being lent to the administration in 1757, the lenders required 41 per cent. And from the former punctuality of government, and present ease, with which taxes were found to pay the stipulated interest, Great Britain commanded the money of Europe, when the pressures of war obliged France to ftop the payment of interest on some of her funded debts.

Mean time the furpluses of the standing taxes of Great Britain amounted, at the commencement of the war, to one million three hundred thousand pounds, which, after the reduction of the interest of debts in 1757, swelled to one million six hun-

dred thousand pounds. And from this vast current of income, the more scanty streams, which slowly slowed from new imposts, were continually supplied, during the exigencies of war.

It is the expences, more than the flaughter, of modern hostilities, which debilitate every community. The whole supplies granted by Parliament, and raised upon the people, during the reign of George II. amounted \* to £. 183,976,624.

The fupplies granted, during the five years of the war, before the decease of that prince, amounted to - - - £.54,319,325.

The fupplies voted, during the three first years of his successor, amounted † to - -

51,437,314

The principal expences of a war, which, having been undertaken to drive the French from North America, has proved unfortunate in the issue - -

As no new duties had been laid on the before-mentioned necessaries of life, the augmentation of the revenue evinces an increase of consumption; consequently of comforts; and consequently of people. In consistant in, let it be considered too, that the bereditary and temporary excise produced, according to an eight years average, ending with 1754 - £.525,317 Ditto, - - ending with 1767 - 538,542

<sup>\*</sup> There were moreover exported from Scotland, according to an average of 1755-6-7, goods to the value of £.663,401

fleets and armies; that made conquests in every

quarter of the globe.

The English shipping, which, after exporting that vast cargo, might have been employed by government as transports, and certainly furnished the fleet with a hardy race, amounted to 609,798 tons; which must have been navi-

gated, if we allow twelve men to every 200 tons burden, by - - 36,588 men.

We may determine, with regard to the progress and magnitude of the royal navy, from the following statement:

In 1749 - 228,215 - 17,000 - f. 839,800 1754 - 226,246 - 10,000 - 494,000 1760 - 300,416 - 70,000 - 3,458,000

It is the boast of Britain, "that while other countries suffered innumerable calamities, during that long period of hostilities, this happy island escaped them all; and cultivated, unmolested, her manusactures, her sisheries, and her commerce, to an amount, which has been the wonder and envy of the world." This stattering picture of Doctor Campbell will, however, appear to be extremely like the original, from an examination of the subsequent details; which are more accurate in their notices, and still more just in their conclusions. Compare, then, the following averages of our navigation

vigation and traffic, during the fubjoined years, both of peace and of war:

Thus, the year 1756 marked the lowest point of the depression of commerce; whence it gradually rose, till it had gained a superiority over the unexampled traffic of the tranquil years 1749-50-51, if we may judge from the value of exports; and almost to an equality, if we draw our inferences from the tonnage of shipping. The Spanish war of 1762 imposed an additional weight, and we have feen the confequent decline.

When, by the treaty of Paris, entire freedom was again restored to foreign commerce, the traders once more fent out adventures of a still greater amount to every quarter of the world, though the nation was supposed to be strained, by too great an exertion of her powers. The falutary effects of more extensive manufactures and a larger trade were instantly seen in the commercial superiority

of the three years following the pacification of 1763, over those ensuing the peace of 1748, though these have been celebrated justly as times of uncommon prosperity. We shall be fully convinced of this fatisfactory truth, if we examine the following proofs:

The gross income of the Post-office, foreign and domestic, which, it is said, can alone demonstrate the extent of our correspondence, amounted,

In the midst of that unexampled prosperity and accumulation of private wealth, Hume talked, in -his history, of the pernicious practice of borrowing on parliamentary security; a practice, says he, the more likely to become pernicious the more a nation advances in opulence and credit, and now threatens the

<sup>\*</sup> The account of the Post-office revenue is stated, by the Annual Register 1773, much higher, mistakingly.

very existence of the nation. Even the grave Blackstone, who seems to have been infected by the declamations of the times, wrote of its being indifputably certain, in 1765, that the present magnitude of our national incumbrances very far exceeds all calculations of commercial benefits, and is productive of the greatest inconveniencies by the enormous taxes, that are raifed upon the necessaries of life, for the payment of the interest of the debt; and those taxes weaken the internal strength of a ftate, by anticipating those resources, which should be referved to defend it in case of necessity \*. Such fentiments, from fuch men, proceed partly from a narrow view of the subject, and perhaps more from well-meaning defires to do national good, by raifing public apprehensions, with regard to the security of property, and the fafety of the state.

> To laugh, were want of goodness and of grace; And to be grave, exceeds all power of face.

## CHAP. IX.

The Commercial Failures, in 1763.—Opinions thereon.

—The true State of the Nation.—Observations on the Peace of 1763.—Various Laws for promoting domestic Improvements.—Satisfactory Proofs of our Commercial Prosperity, at the Epoch of the Colonial Revelt.—Yet, were our Trade and Shipping popularly represented as much on the Decline.

T was at that fortunate epoch, that Great Britain, having carried conquest over the hostile powers of the earth, by her arms, saved Europe from bankruptcy, by the superiority of her opulence, and by the disinterestedness of her spirit. The failures, which happened at Berlin, at Hamburgh, and in Holland, during July 1763, communicated dismay and distrust to every commercial town, on the European continent\*. Wealth, it is said, no longer procured credit, nor connection any more gained considence: The merchants of Europe remained for some time in consternation, because every trader seared for himself, amidst the

<sup>\*</sup> See the despondent letter from the bankers of Hamburgh to the bankers of Amsterdam, dated the 4th of August 1763, in the Gentleman's Magazine of this year, p. 422.

ruins of the greatest houses. It was at this crisis, that the British traders shewed the greatness of their capitals, the extent of their credit, and their difregard of either loss, or gain, while the mercantile world feemed to pass away as a winter's cloud; They trusted correspondents, whose situations were extremely unstable, to a greater amount than they had ever ventured to do, in the most prosperous times: And they made vast remittances to those commercial cities, where the deepest distress was fupposed to prevail, from the determination of the wealthiest bankers to suspend the payment of their own acceptances. At this crifis the Bank of England discounted bills of exchange to a great amount, while every bill was fuspected, as being of doubtful responsibleness. And the British government, with a wife policy, actuated and supported all \*.

On that proud day was published, however, "An Alarm to the Stockholders." By another writer the nation was remembered of "the decrease of the current coin, as a most dangerous circumstance." And by an author, still more considerable than either, we were instructed—"How the abilities of the country were stretched to their utmost extent, and beyond their natural tone, whilst trade

<sup>\*</sup> See Confiderations on the Trade and Finances of the Kingdom. Yet, there were only, in England, 233 bankruptcies, during 1763, and 301, during 1764. Of bankruptcies, there were, in England, during 1773—562, and during 1793—1304.—Thus, it is by comparison, that we gain accurate knowledge.

fuffered in proportion: For, the price both of labour and materials was enhanced by the number and weight of the new taxes, and by the extraordinary demand, which the ruin of the French navigation brought on Great Britain; whereby rival nations may be now enabled to under-fell us at foreign markets, and rival us in our own: That both public and private credit were at the same time oppressed by the rapid increase of the national debt, by the fcarcity of money, and the high rate of interest, which aggravated every evil, and affected every money transaction."-Such is the melancholic picture, which was exhibited of our commercial fituation, foon after the peace of 1763, by the hand of a mafter \*, who probably meant to fketch a caricature, rather than to draw a portrait.

If, however, the resources of Britain arise chiefly from the labour of Britain, it may be easily shewn, that there never existed in this island so many industrious people as after the return of peace, in 1763. It is not easy, indeed, to calculate the numbers, who die in the camp, or in battle, more than would otherwise perish from want, or from vice, in the city, or hamlet. It is some consolation, that the laborious classes are too wealthy to covet the pittance of the soldier, or too independent to court the dangers of the sailor. And though the forsaken lover, or the restless vagrant, may look for

<sup>\*</sup> Confiderations on the Trade and Finances of the Kingdom, p. 3.

refuge

refuge in the army or the fleet, it may admit of fome doubt, how far the giving of proper employment to both, may not have freed their parishes from disquietude and from crimes. There is, therefore, no room, to suppose, that any one left the anvil, or the loom, to follow the idle trade of war, during the hostilities of 1756, or that there were less private income and public circulation. after the re-establishment of peace, than at any prior epoch. For, it must undoubtedly have required a greater number of artificers to produce merchandizes for foreign exportation, after feeding and cloathing the in-

habitants, to the value

Yet,

\* It is acknowledged, that Scotland furnished a greater number of recruits for the fleets and armies of Britain, during the war of 1756, than England, confidering the smaller number of her fighting men. Yet, by this drain, the industrious classes feem not to have been in the least diminished. For of linen there were made for fale.

> 10,624,435 yards. in 1758 11,747,728 in 1760

Of the augmentation of the whole products of Scotland during the war, we may judge from the following detail: The value of merchandizes exported from Scotland,

in 1756 - - f. 663,401 1,086,205 60 64 1,243,927

There were exported yearly, of British-manufactured linens, according to an average of feven years of peace, from 1749 576,373 yards. Ditto, according to an average of feven years

of subsequent war, from 1756 to 1762 1,355,226

Having thus discovered, that the sword had not been put into afeful hands, let us take a view of the great woollen manuYet, it must be confessed, that however the people individually may have been employed, the state corporately was embarrassed in no small degree, by the debts, which had been contracted by a war, glorious, but unprofitable. Upwards of sifty-eight millions had been added to our funded debts, before we began to negociate for peace in 1762. When the unfunded debts were afterwards brought to account, and assigned an annual interest, from a specific sund, the whole debt, which was incurred, by the hostilities of 1756, swelled to £.72,111,000. And when every claim on the public, for the war's expences, was honestly satisfied, the national debt amounted to - £.146,682,8442

which yielded the creditors, to whom it was due, an annuity of - - £.4,850,821.

Though it is the interest, and not the capital\*, that constitutes the real debt of the state, yet this annuity

factories of England, with an aspect to the same exhilarating subject. The value of woollen goods exported,

59	-	-	5,352,299
60		***	5,453,172

<sup>\*</sup> Writers have been carried of late, by their zeal of patriotism, to demand the payment of the principal of the debt, though

annuity was, doubtless, a heavy incumbrance on the land and labour of this island: And however burdensome, it was not the only weight that obstructed, in whatever degree, the industrious classes, in adding accumulation to accumulation. The charge of the civil government was then calculated as an expence to the people of a million. And the peace establishment, for the army, navy, and mis-

though the interest be punctually paid; as if the nature of the contract between the individual and the flate had flipulated for the payment of both. The face is, that few lenders, fince King William's days, have expected re-payment of the capitals, which they lent to the government. The focks, as the public fecurities of the British nation are called, may be compared to the money transactions of the Bank of Amsterdam, as they have been explained by Sir James Stewart. No man who lodges treasure in this Bank, ever expects to see it again: But he may transfer the Bank receipt for it. The Directors of this Bank discovered from experience, that if the number of fellers of those receipts should at any time be greater than the buyers of them, the value of actual treasure safely lodged would depreciate. And it is supposed, that these prudent managers employ brokers to buy up the Bank receipts, when they begin to fall in their value, from the superabundance of them on 'Change. Apply this rational explanation to the British funds. No creditor of a funded debt can ask payment of the principal at the Treasury; but, he may dispose of his stock in the Alley. The principles, which regulate demand and supply, are equally applicable to the British funds, as to the treasure in the Amsterdam Bank. If there be more sellers than buyers, the price of stocks will fall: If there be more buyers than fellers they will as naturally rife. And the time is now come, when the British government ought to employ every pound, which can possibly be faved, in buying up the principal of such public debts as pay the greatest interest.

cellaneous fervices of less amount, though of as much use, may be stated at three millions and a half, without entering into the controversy of that changeful day, whether it was a few pounds more, or a few pounds less. If it astonished Europe to see Great Britain borrow, in one year, twelve millions, and to find taxes to pay the interest of such a loan, amidst hostilities of unbounded expence, it might have given the European world still higher ideas of the resources of Britain, to see her satisfy every claim, and re-establish her sinancial affairs, in no long period after the conclusion of war.

But, the acquisitions of peace proved, unhappily, more embarraffing to the collective mass of an industrious nation, than the imposts, which were constantly collected, for paying the interest of debts, and the charges of government. The treaty of 1763 retained Canada, Louisiana, and Florida, on the American continent; the Granades, Tobago, St. Vincent, and Dominica, in the West Indies; and Senegal in Africa. Without regarding other objects, here was a wide field opened for the attention of interest, and for the operations of avarice. Every man, who had credit with the ministers at home, or influence over the governors in the colonies, ran for the prize of American territory. And many land-owners in Great Britain, of no small importance, neglected the possessions of their fathers, for a portion of wilderness beyond the Atlantic. This was the spirit, which formerly debilitated Spain, more than

the Peruvian mines; because the Spaniards turned their affections from their country to the Indies. With a similar spirit, millions of productive capital were withdrawn from the agriculture, and manufactures, and trade of Great Britain, to cultivate the ceded islands, in the other hemisphere, Domestic occupations were obstructed consequently, and circulation was stopped, in proportion to the stocks withdrawn, to the industry enseebled, and to the ardour turned to less falutary objects.

While the industrious classes of the people were thus individually injured in their affairs, the state fuffered equally in its finances. The new acquilitions required the charge of civil governments, which was provided for in the annual supplies, but from taxes on the land and labour of this island. To defend those acquisitions, larger and more expensive military establishments became now necessary, though our conquests did not yield a penny in return\*. And an additional drain being thus opened for the circulating money, the opulent men, who generally lend to government, enhanced the price of a commodity, which was thus rendered more valuable, by the inceffant demands of adventurers, who offered the usurious interest of the Indies+. The coins did not confequently overflow the coffers of the rich;

<sup>\*</sup> There were some small sums brought into the annual supplies from the sale of lands in the ceded islands.

<sup>†</sup> It was a wife policy, therefore, to encourage foreigners to lend money on the security of West India estates.

the price of the public funds did not rife, as at the former peace, when no fuch drain existed; and the government was unable to make bargains for the public, in 1764, equally advantageous, as at

the less splendid epoch of 1750.

In these views of an interesting subject, the true objection to the peace of 1763 was not, that we had retained too little, but that we had retained too much. Had the French been altogether excluded from the fisheries of Labrador and Newfoundland, and wholly restored to every conquest, the peace had been perhaps more complete. Whether the ministers could have justified such a treaty, within the walls of Parliament, or without, is a consideration personal to them, and is an object, quite distinct in argument. Unhappy! that a British minister, to defend himself from clamour, must generally act against the genuine interest of his country.

Fortunate it is, however, for Britain, that there is a fpirit in her industry, an increase in the accumulations of her industrious classes, and a prudence in the œconomy of her individual citizens, which have raised her to greatness, and sustain her power, notwithstanding the waste of wars, the blunders of treaties, and the tumults in peace. The people prospered at the commencement of the present reign. They prospered still more, when our colonies revolted. And this most energetic nation continues with augmented powers to prosper still, notwithstanding every obstruction.

If this marvellous prosperity arise, from the consciousness of every one, that his person is free and his property safe, owing to the steady operation of laws, and to the impartial administration of justice, one of the first acts of the present reign must be allowed to have given additional force to the falutary principle. A young Monarch, with an attachment to freedom, which merits the commendations, that posterity will not withhold, recommended from the throne to make the judges commissions less changeful, and their falaries more beneficial. The Parliament seconded the zeal of their Sovereign, in giving efficacy to a measure, which had an immediate tendency to fecure every right of individuals, and to give ardour to all their pursuits. If we continue a brief review of the laws of the prefent reign, we shall probably find, that, whatever may have been neglected, much has been done, for promoting the prosperity, and populousness, of this island.

Agriculture ought to be the great object of our care, because it is the broad soundation of every other establishment. Yet, owing in some measure to the scarcity of seasons, but much to the clamour of the populace, we departed, at the end of the late reign, from the system which, being sormed at the Revolution, is said to have then given verdure to our fields. During every session, from the demise of George II. a law was passed for allowing the importation of salt provisions from Ireland; for discontinuing the duties on tallow, but-

ter, hogs-lard; and greafe from Ireland; till, in the progress of our liberality, we made those regulations perpetual, which were before only temporary. We prohibited the export of grain, while we admitted the importation of it; till, in 1773, we fettled by a compromife, between the growers and confumers, a standard of prices, at which both should in future be free\*. If by the foregoing measures the markets were better supplied, the industrious classes must have been more abundantly fed: if prices were forced too low, the farmers, and with them hufbandry, must have both equally fuffered. A steady market is for the interest of all parties; and ought therefore to be the aim of the legislature. On this principle the Parliament feems to have acted, when, by repealing the laws against engrossers, it endeavoured, in 1772, to give a free circulation to the trade in corn. On the other hand, various laws were passed t, for preferving timber and underwood; for encouraging the culture of shrubs and trees, of roots and plants. And additional laws were passed for securing the property of the husbandman in the produce of his fields, and confequently for giving force to his diligence.

The dividing of commons, the inclosing of wastes, the draining of marshes, are all connected with agriculture. Not one law, for any of these

<sup>\* 10</sup> Geo. III. ch. 39; 13 Geo. III. ch. 43. † 6 Geo. III. ch. 36—48; 9 Geo. III. ch. 41.

valuable ends, was passed in the warlike reign of King William. During the hostilities of Queen Anne, eight laws indeed were enacted. In the reign of George I. feventeen laws were enacted for the fame falutary purpofes. In the three-and-thirty years of George II.'s reign, there were passed a hundred and eighty-two laws, with the fame wife defign. But, during the first fourteen fessions of the prefent reign, no fewer than feven hundred and two acts were obtained, for dividing of commons, inclosing of wastes, and draining of marshes. In this manner was more useful territory added to the empire, at the expence of individuals, than had been gained by every war fince the Revolution. In acquiring distant dominions, through conquest, the state is enfeebled, by the charge of their establishments in peace, and by the still more enormous debts, incurred in war, for their defence. In gaining additional lands, by reclaiming the wild, improving the barren, and appropriating the common, you at once extend the limits of our island, and make its foil more productive. Yet. a certain class of writers have been studious to prove, that, by making the common fields more fruitful, the legislature has impoverished the poor \*.

Connected with agriculture too is the making of roads. The highways of Britain were not equal

On the contrary, Mr. Howlet, who cannot be too much praised for his researches, on the subject of population, has published a pamphlet, which proves satisfactorily, that inclosures promote the increase of the people.

in goodness to those of foreign countries, when the peace of Aix-la-Chapelle was concluded. From this epoch to the demise of George II. great exertions were certainly used to supply the inconvenient defect. The first fourteen sessions of the present reign are distinguished, not only for collecting the various road-laws into one act, but for enacting no sewer than sour hundred and sisty-two acts for repairing the highways of different districts. If, by this employment of many hands, nothing was added to the extent of our country, every field, and every village, within it, were brought, by a more easy conveyance, nearer to each other.

In the same manner canals facilitate agriculture, and promote manufactures, by offering a mode of carriage at once cheaper and more certain. A very early attention had been paid to the navigation of our rivers: from the Revolution to the demise of George II. many streams had been made navigable. But, a still greater number have been rendered more commodious to commerce, in the present reign, exclusive of the yet more valuable improvement of canals. And, during the first fourteen fessions of this reign, nineteen acts were passed for making artificial navigations, including those stupendous works, the Bridgewater, the Trent, and the Forth, canals; which, by joining the Eastern and Western seas, and by connecting almost every manufacturing town with the capitals simulate the Roman labours.

In this period too, many of our harbours were enlarged, fecured, and improved: many of our cities, including the metropolis of our empire and our trade, were paved, cleanfed, and lighted. And, without including the bridges that have been built, and public edifices erected, the foregoing efforts for domestic improvement can, with no truth, or propriety, be deemed the works of an inactive age, or of a frivolous people.

If from agriculture we turn our attention to manufactures, we shall find many laws enacted for their encouragement, some with greater efficacy, and fome with less. It was a wife policy to procure the materials of our manufactures at the cheapest rate. A tax was laid on foreign linens, in order to provide a fund, for raifing hemp and flax at home; while bounties were given on these necessary articles from our colonies, the bounty on the exportation of hemp was withdrawn. The imposts on foreign linen yarn were withdrawn. Bounties were given on British linen cloth exported; while the making of cambricks was promoted, partly by prohibiting the foreign, and partly by giving fresh incentives, though without success, to the manufacture of cambricks within our island. Indigo, cochineal, and log-wood, the necessaries of dyers, were allowed to be freely imported. And the duty on oak-bark imported was lowered, in order to accommodate the tanners. It is to be lamented, that the state of the public debts does not admit the abolition of every tax on materials

of

of manufacture, of whatever country: this would be a measure so much wifer, than giving prohibitions against foreign manufactures, which never fail to bring with them the mischies of monopoly; a worse commodity, at a higher price.

Such moderation with thy bounty join,
That thou may'st nothing give that is not thine.

The importation of filks and velvets of foreign countries was, however, prohibited, while the wages and combinations of filk-weavers were restrained, though the price of the goods was not regulated, in favour of the confumers. The workers in leather were equally favoured, by fimilar means. The plate-glass manufacture was encouraged, by erecting a corporation for carrying it on with greater energy. The making of utenfils from gold and filver was favoured, by appointing wardens to detect every fraud. And the law, which had been made, during the penury of King William's days, for preventing innkeepers from using any other plate than filver spoons, was repealed in 1769, when we had made a very extensive progress in the acquisition of wealth, and in the taste for enjoying it.

Egypt with Affyria strove In wealth and luxury.

The most ancient staple of this island was, by prudent regulations in the fabricks of wool, sent to foreign markets, better in quality, and at a lower price.

L3

General industry was excited by various means, which probably had their effect. Apprentices, and workers for hire, were placed under the jurifdiction of magistrates, who were empowered to enforce by correction the performance of contracts. Sobriety was at the fame time preserved, by restraining the retail of spirituous liquors. But, above all, that law must have been attended with the most powerful effect, which was made " for the more effectual preventing of abuses by perfons employed in the manufacture of hats, woollen, linen, fustian, cotton, iron, leather, fur, hemp, flax, mohair, and filk; for restraining unlawful combinations of every one working in such manufactures; and for the better payment of their wages." This law must be allowed to contain the most powerful incitements of the human heart; when we confider too, that the affize of bread was at the fame time regulated.

If from a review of manufactures we inspect our shipping, we shall perceive regulations equally useful. The whale-fisheries of the river St. Lawrence and Greenland were encouraged by bounties, together with the white herring sishery along the coasts of our island. Foreigners were excluded, by additional penalties, from holding shares in British ships. And oak-timber was preferved, by new laws, for the use of the royal navy. The voyages of discovery, which do so much honour to the present reign, though they did not proceed from any act of the legislature, may be regarded

as highly beneficial to navigation, whether we confider the improvement of nautical science, or the preservation of the mariner's health.

But, all those encouragements had been given in vain, had not the course of circulation been kept full and current, and the coin timefully reformed. New modes were prescribed by Parliament for the recovery of small debts in particular districts. Additional remedies were administered for recovering payment on bills and other mercantile fecurities in Scotland. And the iffuing of the notes of bankers was rendered more commodious and fafe. The importation of the light filver coin of this realm was prohibited; and what was of more importance, every tender of British silver coin, in the payment of any fum more than five-andtwenty pounds, otherwise than by weight, at five shillings and two-pence per ounce, was declared unlawful. This admirable principle, so just in its theory, and fo wife in its practice, was, about the fame time, applied to the gold coin. And the gold coins were recalled, and re-coined to an unexpected amount, and ordered to pass current by weight, according to the ancient course, rather than by tale, in conformity to modern practice. This measure, which does equal honour to the contriver, to the adviser, and to the executor, has been attended with all the falutary effects, that were foretold, as to our domestic circulation, our foreign trade, and to our-money-exchanges with the commercial world.

The laws, which were thus passed, from the accession of his present Majesty to the æra of the colonial revolt, had produced the most beneficial effects on our agriculture and manufactures, on our commerce and navigation, had not the energetic spirit, that actuated our affairs, at the peace of 1763, continued to animate the industrious classes, and to accumulate their daily acquisitions. If any one chooses to appeal from general reasonings to particular facts, let him examine the following proofs:

Thus, our navigation had gained, in the intervenient period, more than a hundred and fifty thoufand tons a year, and our foreign traffic had rifen almost a million in annual worth. The gross revenue of the post-office, which, arising from a greater, or a less, correspondence, forms, according to Anderson, a politico-commercial index, amounted

<sup>\*</sup> But, the franking of letters had been now regulated, and other improvements had been meantime made.

Yet, prosperous as our affairs had been, during the short existence of the peace of 1763, they were represented, by an analogous spirit to that of 1738, either of defigning faction, or of uninformed folly, as in an alarming situation. state of things, it was said, is approaching to an awful crisis. The navigation and commerce, by which we rose to power and opulence, are much on the decline. Our taxes are numerous and heavy, and provisions are dear. An enormous national debt threatens the ruin of public credit. Luxury has spread its baneful influence among all ranks of people; yet, luxury is necessary to raise a revenue to fupply the exigencies of the state. Our labouring poor are forced by hard necessity to feek that comfortable subsistence in distant climes, which their industry at home cannot procure them. And the mother-country holds the rod over her children, the colonies, and, by her threatening aspect, is likely to drive them to desperate measures \*.

> Th' alarm-bell rings from our Alhambra walls, And, from the streets, found drums and ataballs!

The Colonial Revolt.—The State of the Nation.—
Her Finances, Trade, and Shipping.—Her military
Power.—The Losses of Trade from the War.—
The Revival of Trade on the Re-establishment of
Peace.—Remarks thereon.—Financial Operations.
—The Sinking Fund established.—Its salutary Policy.

HEN, owing to the native habits and acquired confidence of her colonies; to the ancient neglects, and continued indulgence of Britain; to the incitements of party-men, and to the imbecility of rulers; the nation found herself at length obliged to enter into a serious contest with her transatlantic provinces, she happily enjoyed all the advantages of a busy manufacture, of a vigorous commerce, of a most extensive navigation, and of a productive revenue. Of these animating truths we shall receive sufficient conviction, by examining the following particulars:

After liquidating every claim, subsequent to the peace of 1763, and funding every debt, by assigning an half-yearly interest for every principal, the public enjoyed an annual surplus from the public imposts of two millions two hundred thousand

pounds,

pounds, in 1764. From 1765 to 1770, this finking fund accumulated to £.2,266,246. And from 1770 to 1775, the furpluses of all our taxes amounted annually to the vast sum of £.2,651,455; which having risen, in 1775 and 1776, to three millions and upwards, proved a never-sailing resource, amid the financial embarrassiments of the ensuing war. These facts alone surnish the most satisfactory evidence of the great consumption of the collective mass of the people, and of their ability to consume, from their active labours and accumulating opulence.

Yet, during the prosperous period of the peace, there were only discharged of the capital of the national debt - - £. 10,739,793.

And there remained, notwithstanding every diminution, when the war of the colonies began, in 1775, a national debt of - £. 135,943,051;

Whereon was paid to the public creditors an annuity of - £.4,440,821\*.

The price of the flock of the Bank of England rose mean while from 113 per cent. in July 1764, to 143 per cent. in July 1774: and discounts on the bills of the navy fell from  $6\frac{1}{2}$  per cent. at the first epoch, to  $1\frac{1}{8}$  at the second. The resorm of the coin turned the nominal exchanges on the side of Britain, which were in fact savourable before

<sup>\*</sup> Dr. Price, and Sir J. Sinclair.

hostilities began, owing to the sourishing state of our trade, and the advantageous course of our general payments. And the price of bullion sell, because the supply was superior to the demand. From the foregoing notices, an able statesman might have inferred beforehand, that Great Britain never possessed such resources for a vigorous war. And this truth may be afferted, without sear of contradiction, and without appealing to the immensity of subsequent supplies, for unanswerable proofs of the fast.

The furplus produce of the land and labour of England alone, which, being exported to foreign countries, might have been applied to the uses of war, amounted to £.15,613,003, according to an

average of the years 1772-3-4\*.

The British shipping, which were chiefly employed in exporting this immense cargo, and which were easily converted into transports, to armed ships, and to privateers, amounted annually to 795,943 tons: and this extensive nursery surnished the royal navy with mariners of unequalled skill and bravery, during a naval war, in the last year of which, the Parliament voted a hundred and ten thousand seamen.

We may calculate from the continual progress in population, arising from additional employ-

<sup>\*</sup> There was moreover fent by fea from Scotland, at the fame time, an annual cargo of the value of £.1,515,025, if we may believe the Custom-house books.

ments, that there were in this island, at the epoch of the colonial revolt, full 2,350,000 fighting men.

By examining the following details, we shall acquire ideas sufficiently precise of the royal navy, both before and after the war of the colonies began:—

Of the king's ships, existing in 1774, several were found, on the day of trial, unfit for actual service. By an effort, however, which Britain alone could have made, there were added to the royal navy, during six years of war, from 1775 to 1781:—

,					
	V	effels.		Guns.	Tons.

		-		-	-
		314		8,888	146,654
		-		-	

By a similar effort, during six years of the Revolution-war, England was only able to add to her naval force 11,368 tons. And thus was there a greater fleet fitted out, during the uncommon embarrassiments of the colony-war, than King William, or Queen Anne, or even than King George I. perhaps ever possessed. Of these ships

we were unhappily deprived of several, either by the misfortunes incident to navigation, or by the good fortune of our enemies. Yet, we had in commission, in January 1783, the fleet, the power of which will be most clearly perceived from the following detail\*; when it is remembered, that there were voted for the service of this year a hundred and ten thousand seamen.

		Suns.		Men.

Such was the naval force of Great Britain, which, after a violent struggle, broke, in the end, the conjoined fleets of France, Spain, and Holland. The

privateers of Liverpool, which have been already stated.

<sup>\*</sup> The above flatement, though in a different form, was officially laid before the House of Commons, at the debate on the peace. Besides the ships in the list of the Navy-board, there were seventeen, from 60 to 98 guns, ready to be commissioned. Steel states, in his Naval Chronology, the force

stated, alone formed a greater fleet than the armed colonies were ever able to equip. Owing to what fatality, or to what cause, it was, that the vast strength of Britain did not beat down the colonial insurgents, not in one campaign, but in three, it is the business of history to explain, with narrative elegance, and prosound remark.

It is now time to enquire into the losses of our trade from the war of those colonies, which had been planted, and nursed, with a mother's care, for the exclusive benefit of our commerce.

If it was not much interrupted by the privateers of the malcontents, we loft whole mercantile fleets to our enemies. And it must be admitted, that in the course of no war, fince that of the Revolution, were our shipping so much deranged, or

of the fleets of Great Britain, Françe, Spain, and Holland, at the end of the war, as under:

```

If we review this fatisfactory evidence, we shall probably find, that there were annually employed; when the colony-war began, more than one hundred and fifty thousand tons of British shipping, than had been yearly employed during the profperous years 1764-5-6; and that we annually exported of merchandizes, in the first-mentioned period more than in the last, little less than a million in value: That the colonial contest little affected our foreign commerce, if we may judge from the decreased state of our shipping \*; but; if we draw our inference from the diminished value of exported cargoes, we feem to have loft f. 1,751,190 a year; which formed, perhaps, the real amount of the usual export to the discontented provinces: And the inconsiderable decrease

<sup>\*</sup> There were entered inwards of ships belonging to the revolted colonies, 34,587 tons, according to an average of the years 1771—2—3—4.

What

in the numbers of our outward shipping, with the fall in the value of manufactures, whereof their cargoes confifted, justified a shrewd remark of Mr. Eden's, "that, in the latter period it may be doubted, whether the dexterity of exporters, which, in times of regular trade, occasions oftentatious entries, may not, in many inflances, have operated to under-valuations." It was the alarm created by the interference of France, that first interrupted our general commerce, though our navigation and trade, in 1778, were still a good deal more, than the average of both, in 1755-6-7. The prosperity of our foreign traffic, during the war of 1756, at least from the year 1758, is a fact, in our commercial annals, which has excited the amazement of the world. Yet, let us fairly contrast both our shipping and our trade, great as they were asfuredly, during the first period, and little as they have been supposed to be, during the last:

Ships cleared outwards.
Years. Tons Eng. D° foreign. Total.

1758 - 389,842 - 116,002 - 505,844 - 12,618,335

M

What had occurred, from the interruptions of all our foregoing wars, equally occurred from the still greater embarrassments of the colony-war. Temporary defalcations were, in the fame manner, faid to be infallible fymptoms of a fatal decline. In the course of former hostilities, we have seen our navigation and commerce pressed down to a certain point, whence both gradually rofe, even before the return of peace removed the incumbent pressure. All this, an accurate eye may perceive, amid the commercial diffresses of the last war. There was an evident tendency in our traffic to rife in 1779, till the Spanish war imposed an additional burden. There was a fimilar tendency in 1780, till the Dutch war added, in 1781, no inconfiderable weight. And the year 1781, accordingly, marks the lowest degree of depression, both of our navigation and our commerce, during the war of our colonies. But, with the same vigorous spirit, they both equally rose, in 1782, as they had risen in former wars, to a superiority over our navigation and commerce, during the year, wherein hostilities with France began.

We have beheld, too, on the return of complete peace, the fpring of our traffic rebound with mighty force. A considerate eye my see this in 1783 and 1784, though the burdens of war were then removed with a much more tardy hand than in 1763 and 1764. Twenty years before, the pre-liminaries of peace were fettled, in November 1762, and the definitive treaty with France and

Spain

Spain was figned on the tenth of February thereafter: fo that complete tranquillity was restored early in 1763. But, owing to the greater number and variety of belligerent powers, the last peace was fully established by much slower steps. The provisional articles were settled with the separated colonies in November 1782. The preliminaries with France and Spain were adjusted in January 1783. The definitive treaty with both, and with the United States of America, was figned on the third of September 1783. Though an armiftice was agreed on with Holland, in February 1783, preliminaries were not fettled till September thereafter, yet the definitive treaty was not figned till the twenty-fourth of May 1784. And with Tippoo Saib, who was no mean antagonist, peace was not concluded till March 1784. It was not however till July 1784, that we offered thanks to the Almighty, for restoring to a harassed, though not an exhausted nation, the greatest bleffing, which the Almighty can bestow.

To those dates, and to this fact, we must carefully attend, in forming comparative estimates of our navigation and commerce, of the price of the public stocks, or of the progress of our financial operations. With these recollections constantly in our mind, we shall be able to make some accurate restections, from the following details:

Epochs.	Ships c	leared outward	S.	Value of cargoesi
17497	Tons English.	Do foreign.	Total.	£.
50	609,798 -	51,386 -	661,184.	Value of cargoes. £ 12,599,112

If we examine the subjoined state of the Postoffice revenue, we shall find supplemental proofs of increasing prosperity. The gross income of the posts amounted, in the year, ending

The foregoing statements will surely furnish every honest mind with comfortable thoughts. From those accurate details we perceive, with sufficient conviction, how superior both our navigation and our commerce were, in 1783 and 1784, when peace had scarcely returned, to the extent of both, after the treaty of Aix-la-Chapelle, an epoch

of boafted prosperity. We employed in our traffic, in the year 1784, THREE HUNDRED THOUSAND TONS more than we employed, according to an average of 1749-50-51, exclusive of the shipping of Scotland, to no small amount. Of British ships, we happily employed, in 1784, TWO HUNDRED THOUSAND TONS, more than our navigation employed in 1764, though the veffels of our revolted colonies, amounting yearly to 35,000 tons, had been justly excluded from our traffic, in the last period, but not in the first: The value of exported cargoes from England was, at both epochs, nearly equal; though 1784 can fcarcely be called a complete year of peace, and every industrious people had been admitted within the circle of a commerce. which we had almost ruined the state, to make exclusively ours. The value of our exportations, in 1784, was not indeed equal to the amount of our exports in 1764, but they were fuperior to the value of exported cargoes in 1766, 1767, and 1769\*. If we compare 1784, when we had hardly recovered from a war, avowedly carried on against commerce, with 1774, when we had enjoyed uncommon prosperity during several years of peace, we shall see no cause of apprehension, but many reasons of hope; the number of British ships was much inferior, in 1774, than they were in 1784, after we had wifely excluded the American veffels from the protection of the British flag, of which

<sup>\*</sup> See the Chronological Table for a proof of the fast.

the revolted colonists had shewn themselves unworthy. The value of cargoes, which were exported at both the periods, are fo nearly equal, as not to merit much confideration; far less to excite our fears.

Yet the government was about the same time affuredly told \*, that unless the American shipping were allowed to be our carriers, our traffic must stop for want of transports: And the nation, for years, had been factiously informed, that the independence of the malecontent colonies must prove, at once, the destruction of our commerce, and the downfall of our power.

It was the prevalence of this fentiment, that chiefly generated the colony-war, which was fo productive of many evils, and which, like the other evils of life, have brought with them a happy portion of good. Yet, the fallacy of this fentiment had been previously shewn, from the deductions of reason, and the effects of the absolute independence of our transatlantic provinces, had been clearly foretold, from the experience of the past. Time has at length decided the fast. For, by comparing the exports to the discontented colonies, before the war began, with the exports to the United States, after the admission of their independence, it will appear, from the following detail, that we now

<sup>\*</sup> By the Committee of West India Merchants, in 1783.

supply them with manufactures to a greater amount, than even in the most prosperous times: Thus,

Yet, the exportations of the years 1771—2—3 were beyond example great, because the colonists were even then preparing for subsequent events, and the exporters were induced to make their entries at the custom-house, partly by their vanity, perhaps as much by their factiousness. We may reasonably hope then, to hear no more of our having lost the American commerce, by the independence of the United States. From the epoch, that we have met industrious competitors in their ports, we have had too much reason to complain of having rather traded too much with a people, who affect to be great traders, without having great capitals.

Connected with the American trade is the Newfoundland fishery. Of this Doctor Price afferted, in his usual style of depreciation and despondence, that we feem to have totally lost it. The subjoined detail, by establishing some authentic facts, will give rise, however, to more animating conclusions.

<sup>\*</sup> From the Custom-house books.

Contrast the Newfoundland fishery, as it was annually stated, subsequent to the peace of 1763, by Admiral Palliser, and as it was equally represented, after the peace of 1783, by Admiral Campbell:

Comparative State of the Newfoundland Fishery.

Thus, by excluding the fishers of the revolted colonies, we enjoy at present a more extensive fishery for the mariners of Great Britain, who, being subject to our influence, or our power, may easily be brought into action, when their efficacious aid becomes the most necessary, during war. From those colonies, a hundred and fisteen sloops and schooners used annually to bring cargoes of rum, melasses, bread, flour, and other provisions, to Newsoundland, for which the colonists were paid in bills of exchange on Britain\*. To acquire this traffic for British merchants, is alone a considerable advantage, which we derive from the independence of the United States. About twelve hundred

<sup>\*</sup> Admiral Pallifer's official report.

failors were accustomed to emigrate, every season, from Newsoundland to the separated colonies; where, whatever they might gain, their usefulness to Britain was lost. This drain, which is now shut up, is perhaps a still greater benefit.

Our Greenland fishery, which gives employment to so many useful people, both by land and sea, has been equally promoted by the absolute independence of the United States; as their oil and other marine productions no longer enter into competition with our own. Thus, there sailed to the Greenland seas:

From this accurate detail we perceive, then, how much this important fishery, which had been heretofore depressed by various competitors \*, flourishes, at present, while we have additionally

\* The British fishery to Greenland has gained a manifest superiority over that of the Dutch, which was once so considerable. In 1781 and 1782 the Dutch sent no ships to the Greenland seas:

acquired the whale fishery to the Southern Seas.

Yet, the malecontent colonists, who had long been the active competitors of their fellow-subjects in Great Britain, were accustomed to think, that this island could not exist without the gains of their commerce. Foreign powers equally thought, that they could ruin the affairs of Great Britain, by contributing to their independence. And to this source alone may be traced up one of the chief causes of the colony-war, and of the interference of foreigners. But, were we to search the annals of mankind, we should not find an example of hostilities, which being commenced in opposition to the genuine interest of the belligerent parties, were continued for years in contradiction to common sense.

The leaders of the malecontents feem at length disposed to admit, that being hurried on by passion, they facrificed their commerce and their happiness to factious prejudices and to unmeaning words. Had they been sufficiently acquainted with their own interests, and governed by any prudence, they might, before the war began, have retained a participation in British privileges, and the protection of British power, by verbally admitting, that they were the fellow-subjects of the British people, without being really incumbered with any burden. And they might have thereby gained the present independence of Ireland, with the invaluable participations of Ireland; which, to estimate justly, we ought

ought only to suppose retracted for a season, or even lost for a day.

It is, indeed, fortunate for us, that the French were fo much blinded, by the splendour of giving independence to the British colonies, as not to see diffinctly how much their interpolition and their aid promoted the real advantage of Great Britain. When the colony-war began, the true interest of France confifted in protracting the entanglements, which necessarily resulted from the virtual dependence of thirteen distant communities, claiming separate and sovereign rights; and which had continued to enfeeble the British government by their pretenfions, their clamours, and their opposition, till the diffatisfied provincials had, in the fulness of time, feparated themselves, without any effort on their part, or any struggle on the side of Great Britain. From these embarrassments the French have however freed, by their impolicy, the rival nation. And they have even conferred on the people, whom they wished to depress, actual ftrength, by restoring, unconsciously, the shipbuilding, the freights, and the fisheries; of which the colonists had too much partaken, and which, with other facilities, have refulted to the mothercountry from the absolute independence of the American states.

Spain, perhaps, as little attended to her genuine interests, when she lent her aid to the affociated powers, which enabled the revolted colonies to take their free and equal station among the fovereign nations of the earth. She might have trusted to the hopes and sears of a British Minister, for the security of her transatlantic empire. But, within the American States, where can she place her trust? The citizens of these states have already, with their usual enterprize, penetrated to the banks of the Mississippi. And this active people even now bound on Louisiana and Mexico; and may even now, by intrigue, or force, shake the sidelity, or acquire the opulence, of those extensive territories.

When the Dutch, by departing from their usual caution, interposed in the quarrel, every intelligent European perceived, that the discontented colonies must necessarily be independent. And it was equally apparent, that every advantage of their traffic must have soon been acquired, by the more industrious nations, without the risk of unneighbourly interference, and still more, without the charge of actual hostilities.

When all parties became at length weary of a war, which had thus been carried on contrary to their genuine interests, a peace was made. Whatever advantages of commerce, or of revenue, may have resulted from this memorable event to the other belligerent powers, certain it is, that though Great Britain contracted vast debts, and lost many lives in the contest, she derived from the independence of the American States many benefits, exclusive of domestic quiet, the greatest of all benefits.

Had Great Britain, like Spain, received any public revenue from her transatlantic territories. the had doubtless lost this income by the independence of her Colonies. If Great Britain has thereby lost fovereignty, without jurisdiction, she has freed herself from the charges of protecting an extensive coast, without deducting any thing from her naval strength; fince the colony failors were protected by positive statute \* from being forced into the public fervice. While this nation has faved the annual expence of great military and civil establishments, it can hardly be said to have lost any commercial profits. And, by excluding the citizens of the United States from their accustomed participation in the gainful business of ship-building, freights, and fishery, Great Britain has, in fact, made confiderable additions to her naval power. Thus, the means, which were used to enfeeble this country, have actually augmented its strength, whatever may have been the fate of the other belligerent parties.

It must be admitted, however, that the British government contracted immense debts, by carrying on the late most expensive war. When these were brought to account, in October 1783, the whole debts, payable at the Exchequer, amounted to £.212,302,429, capital; whereon were paid

<sup>\*</sup> The 6th Anne, which had conferred the above-mentioned exemption, was indeed repealed at the commencement of the war, by the 15 Geo. III. ch. 31. § 19.

f. 8,012,061\*, as interest and charges of management. For the payment of this annuity, the legislature had provided funds, which, it must be allowed, did not produce a revenue equal to previous expectation, or to subsequent necessity. And, burdensome as these debts undoubtedly were, they had little embarrassed general circulation, had this principal and this annuity formed the only claims on the public, which had arisen from the colony-war.

But, every war leaves many unliquidated claims, which are the more diffressful to individuals and the state, as these unfunded debts float in the stockmarket at great discount; as they depreciate the value of all public securities; and as, from these circumstances, they obstruct the financial operations of government, and prevent private persons from borrowing for the most useful purposes of productive industry. Of such unfunded debts, there stoated in the market, in October 1783, no less than £. 18,856,542; of which £. 15,694,112 were so far liquidated as to carry an interest, that continually augmented the capitals, exclusive of other claims, which were equally cogent, but of less amount.

The public fecurities, which always rife in value on the return of peace, gradually fell, when those vast debts were exposed to the world in exagge-

<sup>\*</sup> The Exchequer account, as published by the commissioners of public accounts.

rated figures; when the stockholders were terrified by declamations on the defects of their fecurity. which is, in fact, equal to the stability of the British State; and when all claimants on the public were daily affured of a truth, which had then too much existence, that the annual income of the public was not equal to the annual expenditure. The late Earl of Stair was the writer, who most industriously laid such considerations before the world. "If the premises are just," said he, "or " nearly just, and nothing effectual is done to pre-" vent their confequences, the inevitable conclusion "is, that the State is a bankrupt, and those, who " have entrusted their all to the public faith, are " in imminent danger of becoming (I die pro-" nouncing it) beggars \*."

The wasp the hive alarms
With louder hums and with unequal arms.

The nation was mortified, at the fame time, by the events of a war, the mismanagements, and expences, of which had made peace absolutely necessary. And the government was at once ensembled, by distractions, and unhinged, by the competitions of the great for pre-eminence and power.

It was at this crifis of unufual difficulty, that the prefent minister was called into office, nearly

<sup>\*</sup> An argument to prove, that it is the indispensable duty of the creditors of the public, to insist that Government do forth, with bring forward the Consideration of the State of the Nation. By John, Earl of Stair, 1783

as much by the fuffrages of his country, as by the appointment of his fovereign.

Were we to inftitute a comparison of the state of the nation, in 1764 and 1765, with the sinancial operations in 1784 and 1785, we should be enabled to form a proper judgment, not only of the incumbrances, and resources, of the British government, but of the measures, which were at both periods adopted, for discharging our debts, by applying our means.

The war of 1756 augmented the public debt

In 1764, the unfunded debts, including German claims, navy and ordnance debt, army extraordinaries, deficiencies of grants and funds, exchequer bills, and a few smaller articles, amounted to - - for 9,975,018;

In 1784, the unfunded debts, including every article of the same kind, amounted to - - 24,585,157.

The navy bills fold, in 1764, at 93 per cent. discount; in 1784, at 20 per cent. The value of 3 per cent. confolidated stocks, from which the most accurate judgment of all stocks may be formed, was in 1764 at 86 per cent.; but, in 1784, the value may be calculated at 54 per cent. In the first period, our agriculture and manufactures, our

commerce and navigation, were faid to be in the most prosperous condition; in the last, to be almost undone.

With the foregoing data before us, we shall be able, without any minute calculations, or tedious inquiry, to form an adequate judgment of the resources of the nation, and of the conduct of ministers, in applying these resources to the public service, at the conclusion of our two last wars.

In 1764—65, there were paid off and provided for \* - - - £. 6,192,159; 1784—85 - - + 28,139,448.

There remained unprovided for in 1765, — in 1785.

German claims £. 156,044 — £.

Navy debt - - 2,426,915 —

Exchequer bills - 1,800,000 — 4,500,000

Total in both £. 4,382,959\*— £. 4,500,000

\* Confid. on Trade and Finances, p. 41.

† The following are the particulars, from the annual grants and appropriation acts:

Debts funded in 1784,

Debts paid off and otherwise provided for, in 1784

Debts funded, in 1785,

Debts paid off, and otherwise provided for, in 1785,

Total of debts paid off, funded, and otherwise provided for, in 1784—85

L. 28,139,448.

But, let us carry this comparison one step farther. There were paid off and provided for (as we have seen) in 1764 and 1765, of unfunded debts - - £. 6,192,159.

There were afterwards paid off be-

fore 1776 - - - 10,739,793.

Total paid off in eleven years - £.16,931,952.

There were paid off and provided for in two years, 1784—85 - 28,139,448.

Yet, from this last sum must be deducted the £.4,500,000 of Exchequer bills, which, being continued at the end of 1785, were either circulated by the Bank, or were, in the course of public business, locked up in the Exchequer. Those bills indeed, that passed into circulation, were of real use to the Bank, and to individuals, without depreciating funded property, as they continually passed from hand to hand at a premium.

There was no purpose, when the foregoing comparisons were instituted, of exalting the character of the present minister for wisdom and energy, by the degradation of any of his predecessors, for inanity of purpose, and inefficiency of performance. The able men, who managed the national finances from 1763 to 1776, acted like all former statesmen, from the circumstances, wherein they were placed, and probably made as great exertions, in discharging the national debts, as the spirit of the times admitted.

admitted. Greater efforts have, fince the last peace, been made, because every wise man declared, that there was no other effectual mode of securing all that the nation holds dear, than by making the public income larger than the public expenditure. The before-mentioned operations of sinance, in 1784 and 85, it had been impossible to perform, without imposing many taxes, which all parties demanded as necessary. Were any desence required for a conduct, which, if the faithful discharge of duty, at no small risk of personal credit; be laudable; merits the greatest praise, the previous necessity would furnish ample justification.

What had occurred at the conclusion of every war, fince the Revolution, happened in a still greater degree, fince the re-establishment of the last peace. Let us make haste to lighten the public debts, which so much enseeble the state, and embarraís individuals, was the universal cry. It was the judgment of the wifest men, that, confidering the magnitude of the national incumbrances, these debts could neither be paid off, nor greatly leffened, except by a finking fund, which should be invariably applied to this most useful purpose. And, great as the national debts were; amounting to £. 239,154,880 principal, which, for interest and charges of management, required an annuity of £. 9,275,769; after all the financial operations of 1784 and 85, a finking-fund of a million was faid to be fully fufficient; if thus facredly N 2 applied;

applied; as the productive powers of money at compound interest are almost beyond calculation.

Animated by fuch representations, and urged by sense of duty, the minister, though struggling with the embarrassing effects of a tedious and unsuccessful war, which, in the judgment of very experienced men, had almost exhausted every national resource, has established a sinking-fund of a million. Whatever might have been the universal wish, no one, at the re-establishment of the peace, had any reasonable expectation, that so large a sinking-fund would be thus early settled by act of parliament, on principles, which at once promote the interest of the public, by diminishing the national debt, and forward the advantage of individuals, by creating a rapid circulation.

Of other finking-funds, it has been remarked, that they did not arife so much from the surpluses of taxes, after paying the annuity, which they had been established to pay, as from a reduction of the stipulated interest. The sinking-funds, that had been established in Holland during 1655, and at Rome in 1685, were thus created. The well-known sinking-fund, which had its commencement here, in 1716, was equally created by the reduction of interest on many stocks. And hence has been inferred the insufficiency of such such serious by the foundation of Mr. Pitt's sinking-sund is sirmly laid on a clear surplus of a permanent revenue, made good by new taxes, and on the constant appropriation of

fuch annuities as will revert to the public from the effluxion of years.

The fufficiency and facredness of this fund may be however inferred, not so much from any artificial reasoning, as from the nature of the trusts, and from the spirit of the people, which ever guards with anxiety what has been dedicated to their conftant fecurity, and future glory. The finking-fund of 1716 was left to the management of ministers, who found an interest in misapplying it. Mr. Pitt's finking-fund has been entrusted to fix commissioners, holding offices, which are no way connected with each other, and to the poffessors of which the people look for fidelity, knowledge, and responsibility. From such trustees no misapplication, or jobbing, can reasonably be apprehended. Eight years have now elapsed, fince the establishment of their authority, and neither jobbing, nor mismanagement, has been suspected by malice, or faction. Add to this, that the commissioners, being required by law to lay out the appropriated money in a specified manner, and to give an annual account of their transactions to Parliament, act under the eye of a jealous world. and under the censure of an independent press, which, in a free country, has an efficacy beyond the penalties of the legislature.

But, the act itself, which creates this fund, and makes those provisions, may be repealed, it is feared, by the rapacity of future ministers, or by the distress of subsequent wars. Against this objection experience has also given its decision.

It is however no small security of the present finking-fund, that the impolicy of misapplying the former is admitted with universal conviction and regret. Under this public opinion, no minister, whatever his principles, or his power, may be, will ever attempt the repeal of a law, which, in fact, contains a virtual contract with the public creditors, and on the existence of which the public credit must in suture depend: For the repeal of this act, and the feizure of this fund, during the pressures of any war, would be a manifest breach of this contract; and would amount to a bankruptcy, because it would be a declaration to the world, that the nation could no longer comply with her most facred engagements. And what evil is to be feared, or good expected, from any war, which ought to frand in competition with the evils of bankruptcy, or the good that must necesfarily refult from the invariable application of fuch a fund? A million, thus applied, will affuredly free the public from vast debts, and, in no long period, yield a great public revenue: It is demonstrable, that a finking-fund of a million, with the aid of such annuities as must meanwhile fall in, will fet free four millions annually, at the end of twenty-seven years: It has been demonstrated by ingenious calculators, that the invariable application of a million to the annual payment of debts, would,

would, in fixty years, discharge £.317,000,000 of 3 per cent. annuities, the price being at 75 per cent. In eight years, Mr. Pitt's sinking-fund has, in sact, purchased £.13,617,895 of stock, at the expence of £.10,599,265 of cash. This measure, then, is of more importance to Great Britain than the acquisition of the American mines. And, this measure, thus sacred in its principles, and salutary in its effects, will not probably be soon repealed by the influence of any minister, because all orders in the state are pledged to support it, while the property of every man in the community is bound

for payment of the national debt.

Without inquiring minutely, whether a furplus of £. 900,000 appeared in the exchequer on any given day, it is fufficiently apparent, that all the purposes of this measure of finance will be amply answered, by the punctual payment of f. 250,000 in every quarter to the trustees, as the law requires; because the Parliament are engaged by the act to make good the deficiency, if the furplus of the finking-fund should in any year amount to less than a million. The fact is, that f. 250,000 have been punctually applied every quarter, fince it began to operate, on the 1st of August 1786. Additional fums have meantime been thrown into the finkingfund, for giving a quicker pace to its powerful operations. And, by these means, has it produced, at the end of eight years, much greater effects than fome calculators originally conceived, from

N 4

taking

taking narrow views of a most extensive prospect \*.

Little fluctuation in the funds will be created by fending into the Stock Exchange a certain fum, on certain days, during every quarter. It is the great rife, and the proportional fall, in the value of the flocks, which enable jobbers to gain fortunes. And, of confequence, the commissioners will hardly

\* Earl Stanhope was the calculator, who urged every objection against this sinking-fund with the most ingenuity and force; having a plan of his own to propose. His lordship formed a calculation, in order to show the effect of a surplus of £.1,000,000 a year, with such long annuities as might fall in. The following detail will show the amount of his calculation, and the sum total of the fact, from experience, of stock actually bought; at the end of every year.

Eight Years.	Earl Stanhope's Calculations.	Eight Years.	The fact, from experience.
5th April 1787 D° - 1788 D° - 1789 D° - 1790 D° - 1791 D° - 1792 D° - 1793 D° - 1794	£, 1,000,000 2,065,351 3,173,316 4,325,599 5,527,230 6,792,613 8,145,898 9,553,314	4th Quarter. 8th D° - 12th D° - 16th D° - 20th D° - 24th D° - 28th D° - 32d D° -	£.  1,343,100  2,874,150  4,447,150  5,997,990  7,568,875  9,441,850  11,196,165  13,617,895

Thus, hath the event decided against Earl Stanhope's calculations and plan, by a balance of £.4,064,581, in eight years operations. And, this experience is alone sufficient to satisfy us how little the theories of speculatists ought to be allowed to actuate the practice of life, or the movements of legislation.

find it their interest, if they had the inclination, to deal in public securities with a view to great profits \*. If the gradual and steady rise of the stocks be for the interest of the public, as well as of individuals, the quarterly application of the new fund must be deemed a great improvement of the old, which was feldom felt in the flock market, and gave little motion to general circulation. these means will the capitals of the public debts be rendered more manageable, in no long period; the price of stocks must necessarily rise; the finance operations of government will thereby be performed with still greater advantage to the state; and industrious individuals will, in the same manner, be more easily accommodated with discounts, and with loans.

The establishment of such a fund, and the creation of such a trust, are doubtless very important fervices to the people collectively, as they form a corporation, or community. But, it may be easily shewn, that the people individually will be still

<sup>\*</sup> The purchases being confined to the transfer days, little more than £.5,000 can be brought to market on any one day, which of consequence can make no rapid rise of any one stock: And, when the finking-fund amounts to the greatest possible sum of £.4,000,000, the purchase-money on any day can only be something more than £.20,000.—The gradual application of this sinking-sund is an excellent quality of it, because sudden changes in the stock-market are not for the interest of real buyers, or sellers. The commissioners therefore can gain little profit from their superior knowledge of the stock into which they intend to purchase.

greater gainers, by the new finking-fund, as it has been thus judiciously formed. And, in this view of the subject, its steady operation will be of still greater utility to the nation, than even the payment of debts, because it is the prosperity of individuals, which forms the real wealth of the state. The ingenious theorists, who oblige the world with projects, for paying the national debt, consider merely the interest of the corporation, or public, without attending to what is of more importance, the advantage of the private persons, of whom the public consist. Of Mr. Pitt's sinking-fund, it is one of the greatest commendations, that it promotes the true interest of both parties, in just proportions.

A new order of buyers being thus introduced, and a new demand being thereby created, the price of stocks must necessarily rise, notwithstanding the arts of the stockjobbers; because the public securities become in fact of more real value. In proportion as the money is fent from the finking-fund to the stock-exchange, the price of stocks must gradually rife still higher. And a rife of stocks, when gradual and fleady, never fails to produce the most falutary effects on universal circulation, by facilitating transfers of property, and by aiding the performance of contracts. Recent experience confirms this general reasoning. Every one must remember how impossible it was for individuals to borrow money on any fecurity, for any premium, till towards the end of 1784. When the stocks

began

began to rife, the price of lands equally rofe. When the government ceased to borrow, and the unfunded debts were liquidated, manufacturers and traders easily obtained discounts, and readily acquired permanent capitals.

But, the wisdom of man could not have devised a measure more favourable to circulation, than the fending of large fums, from day to day, into the Stock-exchange; whereby the course of circulation is constantly filled, and, being always augmented, becomes still more rapid. It is the rife of stocks, and the fulness of circulation, which make money overflow the coffers of the opulent, unless fome unforeseen drain should be unhappily opened. When cash becomes thus plenty, the natural interest of money gradually falls, and bills of exchange, and other private fecurities, are readily discounted at a lower rate. In this happy state of things, money is faid to be plenty; and every individual is accommodated with loans and with discounts, according to his needs, by pledging his property, or his credit.

Owing to all those facilities, every industrious man easily finds employments. The manufacturers are all engaged. The traders send out additional adventures. The ship-owners are offered many freights. The produce of the husbandman is consumed by a busy people. And thus are rents more readily paid, and taxes more easily collected. Such are the benefits, which result to individuals and the state, from a rapid circulation, that

can only be promoted, and preserved, by sending money constantly into the Stock-exchange. It is thus, by inciting an active industry, that the payment of public debts, through the channel of a quarterly finking-fund, enables the people to pay the greatest taxes with ease and fatisfaction. And thus may we folve a difficult problem in political ceconomy, whether the furplus of the public revenue ought to be applied in the discharge of debts, or in the diminution of taxes; the one meafure affuredly invigorates the industry of the people, in the manner, that we have just observed; the other may promote their indolence, but cannot procure them an advantage, in any proportion to the benefits of unceasing employments, and the accommodation of more extensive capitals: by means of industry the heaviest burthens feem light: by the influence of floth the flightest duty appears intolerable.

It was owing, probably, to the invigorating effects of an augmented circulation, that our agriculture and manufactures, our commerce and navigation, not only flourished, but gradually increased, to their present magnitude, amidst our frequent wars, our additional taxes, and accumulating debts. How much the scanty circulation of England was filled, during the great civil wars of the last century, by the vast imposts of those times, and how soon the interest of money was thereby reduced, we have already seen. Similar consequences followed the wars of William, and of Anne,

Anne, owing to fimiliar causes. The finking-fund, which, for feveral years after its creation, in 1716, did not much exceed half a million, produced, affuredly, the most falutary influences, even before the year 1727: The value of the public funds rose considerably, though the stipulated interest on them had been reduced, first, from 6 to 5 per cent. and, in that year, from 5 to 4 per cent. The natural interest of money gradually fell: The price of lands in the mean time advanced from 20 and 21 years purchase to 26 and 27: And our agriculture and manufactures, our trade and our shipping, kept a steady pace with the general prosperity of the nation \*. Such are the falutary effects of a circulation, which, being replenished by daily augmentations, is preferved constantly full. And thus it is, that the people are eased in the payment of taxes, by being better enabled to pay them. while taxes are continually augmented, though there may be fome imposts, which ought to be repealed, as they press upon particular objects.

On the other hand, an obstructed circulation never fails to create every evil, which can afflict an industrious people: Scarcity of money, and unfavourable discounts; unpurchased manufactures, and want of employments; unpaid rents, and unperformed contracts; are the mischiefs, which distress every individual, and embarrass the community, while circulation is impeded. The com-

<sup>\*</sup> For the above-mentioned facts, fee And. Chrone Com. vol. ii. p. 316-22.

merce of England was well nigh ruined, during King William's reign, by the diforders in the coin, the want of confidence, and the high price of money. The foreign bankruptcies, in 1763, reduced the value of cargoes, which were exported in this year, from fixteen millions to fourteen, during feveral years, owing to the decline of general credit. How much the domestic business of Great Britain was embarrassed by the bankruptcies of 1772 and 1773, which, in England, amounted, in the first year, to 525, and to 562, in the second, is still remembered\*. The complaints, which were at those periods made of a decline of commerce, were merely owing to an obstructed circulation, as subsequent experience hath amply evinced.

Wars, then, in modern times, are chiefly defructive, as they incommode the industrious clas-

\* The following detail is alone sufficient to demonstrate how the manufactures of a country may be ruined by a languid circulation, without the interruptions of war. Of linen cloth there were stamped for sale in Scotland,

during 1771 — 13,466,274 yards. 1772 — 13,089,006. 1773 — 10,748,110. 1774 — 11,422,115.

Of woollen cloth, there were fulled, in the West Riding of Yorkshire, in the year ended

Broad. Narrow.
the 25th March 1792, - 203,623 pieces 156,475 pieces
Ditto - 1793, - 214,851 — 190,468
Ditto - 1794, - 190,332 — 150,666

fes, by obstructing circulation. Yet, general induftry was not much retarded, however individual persons, or particular communities, may have been deranged, or injured, by the colony-war. The people were able to confume abundantly, fince they actually paid vast contributions, by their daily confumption of exciseable commodities\*. And though they pursued their accustomed occupations, and thus paid vast imposts, the established income of the state sustained considerable defalcations from various causes; from the abuses, which war never fails to introduce into certain branches of the revenue; from the illicit traffic, that generally prevails in the course of hostilities; and from the new impositions, which somewhat lessen the usual produce of the old.

## \* Of mait there were confumed.

Those disorders in the public revenue have been at least palliated, if they have not been altogether cured, fince the re-establishment of peace. The measures, which were vigorously adopted, for the effectual prevention of imuggling; the alterations, which have been made in the collection of fome departments of the public income; and the improvement, that has been happily effected in all; have brought, and continue to bring, vast sum's into the Exchequer\*. The public expenditure continually distributes this vast revenue among the creditors, or fervants of the State, who return it to the original contributors, either for the neceffaries, or the luxuries, of life. The Exchequer, which thus conftantly receives and dispenses this immense income, has been aptly compared to the human heart, that unceasingly carries on the vital circulation, fo invigorating while it flows, fo fatal when it stops. Thus it is, that modern taxes, which are never hoarded, but always expended, may even promote the employments and industry, the prosperity and populousness, of an industrious people.

\* The whole public revenue paid into the Exchequer, from Michaelmas 1783 to ditto 1784 — £. 12,99\$,519

## CHAP. XI.

The Controversy on the Populousness of Britain revived.—The Parties.—A Review of their Publications.—An Examination of the Argument—from Reasoning—from Fasts—from Experience.—The augmented Populousness of Ireland.—The Increase of People in Scotland.—The general Result—as to England.

THE contest, which had been carried on during the war of 1756, between Doctor Brackenridge, and Doctor Forster, with regard to the effects of our policy, both in war, and in peace, on population, was revived, amidst our Colony contests, by Doctor Price, and his opponents. This last controversy furnishes much more instruction, with regard to a very interesting subject, than the former; as the disputants took a wider range, and collected, in their course, many new facts. Doctor Price revived the dispute, by contributing an Appendix to Mr. Morgan's Essay on Annuities, wherein the Doctor attempted to prove, by ingenious remarks on births and burials, a gradual decline in the populousness of Great Britain. was foon encountered by Mr. Arthur Young, who justly inferred, from the progress of improvements in agriculture, in manufactures, and in commerce, an augmentation, in the number of people. Mr. Eden published, in 1779, elegant criticisms \* on Doctor Price; by which he endeavoured to invalidate the argument, that had been drawn from a comparison of the number of houses, at the Revolution, and at present; insisting that the first must have been less, and the last much greater, than the text had allowed. In his reply, the Doctor shewed some mistakes in his antagonist, without adding much to the force of his argument. Yet, if we may credit his coadjutor, who entered zealously into all his prejudices, be considered bis system as more firmly established than ever †.

This long-continued controversy now found other supporters. Mr. Wales published his Accurate Inquiry, in 1781. With considerable success he overthrows Doctor Price's fundamental argument, from the comparison of houses at different periods; by shewing, that the returns of houses to the tax-office are not always precise; by proving, from actual enumerations of several towns, at distant periods, that they had certainly increased; by evincing, from the augmented number of births, that there must be a greater number of breeders. This able performance was immediately sollowed by Mr. Howlet's still more extensive examination of Doctor Price's essay. Mr.

<sup>\*</sup> In his Letters to Lord Carlisle.

<sup>+</sup> Uncertainty of Population, p. 9.

Howlet expands the arguments of Mr. Wales; he adds fome illustrations; and, what is of still greater importance, in every inquiry, he establishes many additional facts.

The treatifes of Mess. Wales and Howlet made a great impression on the public, as facts in opposition to speculations, must ever make. At the moment, when their publications had gained - a confiderable share of popular belief, it was deemed prudent, on the fide of Doctor Price, to publish-Uncertainty of the present population. This writer frankly declares that he is convinced by neither party, and that he must consequently remain in a state of doubt and sceptical suspense. His apparent purpose is to shew, in opposition to the popular belief, that after all our refearches, we really know nothing with any certainty, as to this important part of our political œconomy. In the sceptical arithmetic of this dubious computer, 1,300,000, when multiplied by 5, produce 6,250,000. Doctor Price and his coadjutors feemed unwilling to admit, that if there were, in England and Wales, at Lady-day 1690, 1,300,000 inhabited houses, and five persons in each, there must necessarily have been, at the same time, 6,500,000 fouls. For, they feared the charge of absurdity, in supposing a decrease of a million and a balf of people, during ninety years of augmented employments: And, they perceived, that by admitting there were, in 1690, fix million and a half of people, they would thereby be obliged to admit, that there had been an augmentation of a million

a id a half, during the foregoing century, notwithflanding the long civil wars, and the vast emigrations. The Doctor published, in 1783, Remarks on these tracts of Mess. Wales and Howlet\*. And, with his usual acuteness, he detects some mistakes; but, with his accustomed pertinacity, he adheres to his former opinions.

The matter in dispute, we are told †, must be determined, not by vague declamation, or speculative argument, but by well-authenticated sacts: For, "the grand argument of Dr. Price is at once extremely clear, and comprehended in a very narrow compass." The following is the state of this grand argument:

That there appeared by the Hearth-books, at Lady
Day 1690, to be in England and
Wales - - - 1,300,000;
That there appeared by the Taxoffice books, in 1777, only - 952,734:

Whence, the Doctor inferred, as a necessary confequence, that there had been a proportional diminution of people, since 1690.

Confidering how important this subject is to the state, and how much it is connected with the general purpose of this Estimate, I was led to examine, at once with minuteness and with brevity, an argu-

<sup>\*</sup> In his Observations on Reversionary Payments, in 2 vol. 8vo.

<sup>+</sup> By Uncertainty of Population.

ment, which has been oftentatiously displayed, as equal in its inferences to the certainty of actual enumerations.

In lieu of the obnoxious hearth-tax, the Parliament imposed, in 1696, a duty of two shillings on every house; six shillings on every house, containing ten windows, and sewer than twenty; and ten shillings on every house having more than twenty windows; those occupiers only excepted, who were exempted from church and poor rates. And Gregory King computed, with his usual precision, what the tax would produce, before it had yielded a penny\*: Thus, says he, the number of inhabited bouses is - - - 1,300,000; whereof, under 10 windows 980,000; under 20 windows 50,000,

1, 10,000.

# Out of which deducting,

for those receiving alms - - - 330,000 houses at 2s. 40,000. for those not paying to church and poor 380,000 — at 2s. 4d. 44,000. for omissions, frauds, and defaulters - 40,000 — at 4s. 8,000.

Infolvent - - 750,000. £. 85,000. Solvent - - 550,000; paying nett - 119,000.

However many infolvent houses were thus deducted from the 1,300,000 inhabited houses, Gregory King allowed at last too many solvent ones. This truth may be inferred from the following facts.

<sup>\*</sup> Pol. Observ. Brit. Mus. Harl. MSS. Nº 1898.

There remains in the tax-office \* a particular account of the money, which each county paid in 1701, for the before-mentioned tax of 1696, from the afferments of Lady-day 1700, and which amounted to - - £.115,226.

But, the oldest list of houses, which specifically paid the tax of 1696, is "an account made up, for 1708, from an old survey book," but from prior affessments: And this account stands thus:

He who does not see a marvellous coincidence †, between this official document and the previous calculation of Gregory King, must be blind indeed. The folvent houses of King, and the charged houses of 1708, are of the same kind, both being those houses, which assually paid, or were supposed to have paid, the tax. And, Mr. Henry Reid, a

- \* I have ranfacked the tax-office for information on this litigated but important subject; and I was affisted in my researches by the intelligent officers of this department, with an alacrity, which shewed, that, having fully performed their duty to the public, they did not fear minute inspection.
- † The houses having upwards of twenty windows, in the tax-office account of 1781, are 52,373. The number of the same kind allowed by King is 50,000: But he is not so fortunate in his other calculations.

comptroller of the tax-office, who was noted for his minute diligence, and attentive accuracy, reported to the Treasury, in October 1754, that the old duties, on an average, produced yearly, from £. 118,839\*. 1696 to 1709

But, there must have necessarily been a great many more houses, in 1708, than the 508,516, charged, and paying £. 121,033. In the twelve years from 1696, there could have been no great waste of houses, however powerful the destructive cause might have been. And Gregory King, in order to make up his thirteen hundred thousand houses, calculated the dwellings of the poor, in 1696, 710,000; at and of defaulters, &c. at 40,000;

750,000.

Davenant + stated, in 1695, from the hearth-books, the cottages, inhabited by the poorer fort, at 500,000; and he afterwards afferts, as Doctor Price observed, that there were, in 1689, houses, called cottages, having one hearth, to the number of 554,631: whence we may equally suppose, that there were dwellings, having two hearths, a very confiderable number, whose inhabitants, either receiving alms, or paying nothing, did not contribute to the tax of 1696: fo that, in 1708, there must have certainly existed 710,000 dwellings of the poor; as this number had certainly existed in 1696.

<sup>\*</sup> Gregory King calculated the tax beforehand at f. 119,000. † Vol. i. edit. 1st, p. 5.

Mr. Henry Reid moreover reported to the Treasury, in 1754, that in the year 1710, when an additional duty took place, it became an universal practice to stop up lights; so that, in 1710, the old duties yielded only f. 115,675:-And for fome years, both the old, and the new, duty fuffered much from this cause, as there was no penalty for the stopping of windows. Other duties, continues he, were imposed in 1747\*; so that from Lady-day 1747, to Lady-day 1748, the whole duties yielded £. 208,093: and, an explanatory act having passed in 1748, the duties yielded, for the year ending at Lady-day 1749, £. 220,890: But, other modes of evading the law being foon found, the duties decreased year after year.-And thus much from the intelligent Mr. Henry Reid, who never dreamed of houses falling into non-existence.

The first account of houses, which now appears to have been made up, subsequent to that of 1708, is the account of 1750, and the last is that of 1781. With the foregoing data before us, we may now

<sup>\*</sup> By the 20 Geo. II. ch. 3; which recites, that whereas it hath often been found from experience, that the duties granted by former acts of parliament have been greatly lessened by means of persons frequently stopping up windows in their dwelling houses, in order to evade payment; and it hath often happened, that several assessments have not been made in due time; and that persons remove to other parishes without paying the duty for the houses so quitted, to the prejudice of the Revenue. But the legislature do not recite, that houses daily fell down, or that the numbers of the people yearly declined.

form a judgment fufficiently precise, in respect to the progress of our houses, charged and chargeable with the house and window tax:

The charged, in 1696, according to King, The chargeable, according to him,	40,000
The charged and chargeable, in 1750,	590,000 729,048*
Increase in 54 years	139,048
The charged, in 1708 The chargeable, let us suppose -	508,516
The charged, and chargeable, in 1781,	608,516
Increase in 73 years	112,835.

Here, then, is a folution of the difficult problem, in political economy, which has engaged fo many able pens, Whether there exist as many houses, at present, as there certainly were, in England and Wales, at the Revolution; at least, the question is decided, as to the number of houses, charged and chargeable with the window and house tax: And, of consequence, the middling and higher ranks of

<sup>\*</sup> This high number, in 1750, was probably owing to the act of parliament, 20 Geo. II. which had just past, when new modes of circumvention had not yet taken place.

men must, with the number of their dwellings, have necessarily increased.

A great difficulty, it must be admitted, still remains, which cannot be altogether removed, though many obstructions may be cleared away. The difficulty consists, in ascertaining, with equal precision, the number of dwellings, which have been exempted, by law, from every tax, since 1690, on account of the poverty of the dwellers. The litigated point must at last be determined by an answer to the question, Whether the lower orders are more numerous in the present day, than they were in 1690?

A modern fociety has been compared, with equal elegance and truth, to a pyramid, having the higher ranks for its point, and the lower orders for its base. Gregory King lest us an account of the people, minutely divided into their several classes, which, though formed for a different purpose, contains sufficient accuracy for the present argument \*.

<sup>\*</sup> Davenant's works, 6 vol. Scheme D, which was copied from Gregory King's Observations, p. 15, with some inaccuracies.

If this division of the people should be deemed only probable, it would prove, with sufficient conviction, how many dwellings the two last classes required to shelter them, since they contained no fewer than two million five bundred and seventy-four thousand persons. Gregory King allotted for them, as we have seen, 550,000 houses. And it is apparent, that if the two lower orders of men have augmented, with the progress, which has been traced in our agriculture and manufactures, in our traffic and navigation, such persons must necessarily dwell in a greater number of houses.

Davenant has shewn, that the poor rates of England and Wales amounted, towards the end of Charles II.'s reign, to - - £. 665,302.

By an account given in to parliament, in 1776, the poor rates amounted to - - 1,

1,556,804.

However this vast sum, which is probably under the truth, may have been misapplied, or wasted, yet every one, who received his proportion of it, as alms, was exempted from the tax on chargeable houses, and must have consequently swelled the number of cottagers.

Whatever the term cottage may have fignified formerly, it was described, by the statute of the 20 Geo. II. as a house, having nine windows, or under, whose inhabitant either receives alms, or does not pay to church and poor. But, we are

not inquiring about the word, but the thing; whether the dwellings of the lower orders, of whatever denomination, have increased, or diminished, since the Revolution; and the end of this inquiry is to find, whether the lower orders of men have decreased, or augmented.

The argument for a decreased number of cottages is this: Gregory King, from a view of the hearth-books of 1690, (which yet did not contain the cottages, since they were not chargeable with the hearth-tax) calculated the dwellings of those, who either received alms, or did not give any, at - - - 550,000.

The furveyors of houses returned the number of cottages, in 1759\*, at - 282,429; and in 1781 - 284,459.

Forster, the antagonist of Brackenridge, was the first, probably, who objected to the accuracy of the surveyors returns, with regard to all houses. Having obtained the collectors rolls, he had counted, in 1757, the number of houses in nine contiguous parishes; whereby he found, that, out of 588 houses, only 177 paid the tax; that Lambourn

<sup>\*</sup> This is the first year, says Doctor Price, that an order was given to return the cottages excused for poverty. I have in my possession some returns which were made of cottages in 1757, and which, having escaped the destruction of time, evince previous orders and previous performance. There was, in sact, an account of the cottages made up at the tax-office in 1756.

parish, wherein there is a market-town, contains 445 houses, of which 229 only paid the tax. When it was objected to Forster, that this survey was too narrow for a general average, he added afterwards nine other parishes, in distant counties; whereby it appeared, that of 1,045 houses, only 347 were charged with the duty; whence he inferred, that the cottages were to the taxable houses as more than two to one \*. Mr. Wales equally objected to the truth of the furveyors returns, in their full extent. And Mr. Howlet endeavoured, with no fmall fuccefs, to calculate the average of their errors, in order to evince what ought probably to have been the true amount of the genuine numbers. In this calculation, Doctor Price hath doubtless shewn petty faults; yet is there sufficient reason to conclude, with Doctor Forster and Mr. Howlet, that the houses returned to the tax-office are to the whole, as 17 are to 29, nearly. It will at last be found, that the returns of taxable houses are very near the truth; but that the reports of exempted houses cannot possibly be true: for 280,000, or even 300,000 cottages, would not contain the two lower orders, who existed in England and Wales at the Revolution; and

<sup>•</sup> Forfter's letter, in December 1760, which the Royal Society declined to publish. [MSS. Birch, Brit. Mus. No. 4440.] The algebraical sophisms of Brackenridge were printed in the foreign gazettes: the true philosophy of Forster, by experiment and fast, was buried in the rubbish of the Royal Society.

who, with the greatest aid of machinery, could not perform the annual labour of the same countries at present.

Our agriculture has at all times employed the greatest number of hands, because it forms the support of our manufactures, our traffic, and our navigation. It admits of little dispute, whether our husbandry has been pursued, before, or since the bounty on the export of corn, in 1689, with the greatest skill, diligence, and success. Mr. Arthur Young found, in 1770, by inquiries in the counties, and by calculations from minutes of fufficient accuracy, that the persons engaged in farming alone amounted to 2,800,000; befides 2 vast number of people, who are as much maintained by agriculture as the ploughman that tills the foil \*. Yet, the two lower ranks of Gregory King, including the labouring people and outfervants, the cottagers, paupers, and vagrants, amounted only to 2,600,000.

Of the general state of our manufactures at the Revolution, and at present, no comparison can surely be made, as to the extensiveness of their annual value, or to the numerosity of useful people, who were employed by them. The woollen manufacture of Yorkshire alone is, in the present day, of equal extent with the woollen manufactures of England, at the Revolution. By an account, which had been formed at the aulnager's office, it

<sup>\*</sup> North. Tour, vol. iv. p. 364-5.

appears, that the woollen goods exported in 1688, were valued at two millions, exclusive of the home confumption, that amounted to a much less value \*. The manufacturers furnished the committee of privy council, who fat on the Irish arrangements, with " a particular estimate of the Yorkshire woollen manufactures;" whereby it appeared, that there were exported yearly of the value of f. 2,371,942, and confumed at home f. 901,759+. We know, with fufficient certainty, from the custom-house books, that after clothing the inhabitants, there were exported of the value of woollens, according to an average of the years 1699-1700-1, the value of --f. 2,561,615; the average of 1769-70-71 - 4,323,463; the average of 1790-91-92 - 5,056,733.

And this manufacture, which has been always regarded as the greatest, continues to flourish, as we have just seen, and to employ, as it is said, a million and a half of people.

Since the epoch of the Revolution, we may be faid to have gained the manufactures of filks, of linen, of cotton, of paper, of iron, and the potteries, with glass; besides other ingenious fabrics, which all employ a very numerous and useful race. We may indeed determine, with regard to the augmentation of our manufactures, and

<sup>\*</sup> MSS. Harl. Brit. Mus. No 1898, for a minute account.

<sup>+</sup> The Council Report.

to the increase of our artizans, from the following

There were exported, according to an average of the years 1699—1700—1701, products, exclusive of the woollens before-mentioned, of the value of - - - - - - £. 3,863,810. Ditto in 1769—70—71 - - 10,565,196. Ditto in 1790—91—92 - - \*10,744,092.

Thus, have we demonstration, that while our woollen manufactories nearly doubled, in their extent, during seventy years, our other manufactures had almost trebled, in theirs: And, therefore, it is equally demonstrable, that the great body of artists,

\* Such is the exhilarating view, which the exported cargoes exhibit of our prosperity! The imports of the materials of manufacture will furnish a prospect equally pleasing:

who were conftantly employed, in all those manufactories, must have increased, nearly, in the same proportion, during the same busy period.

The whole failors, who were found in England, by enumeration, in January 1700—1, amounted to - - - - \*16,591.

By a calculation, which agreed nearly

with the accuracy of this enumeration, there appeared to have been annually employed in the merchants fervice, between the years 1764 and 1774

tween the years 1764 and 1774 - 59,565.

In 1792 : - - - 87,569.

The tonnage of English shipping,
during King William's reign,
amounted only to - - 230,441 tons.
D' during the present reign - 1,186,610

We may thence certainly determine, with regard to the number of useful artificers, who must have been employed, during the latter period, more than in the former, in building and repairing our ships. It is husbandry, then, and manufactures, commerce, and navigation, which every where, in later ages, employ, and maintain the great body of the people. Now, the labour demanded, during the present reign, to carry forward the national busi-

<sup>\*</sup> There is reason to believe, however, that the above enumeration did not contain the sailors of the port of London.

nefs, agricultural and commercial, could not, by any possibility, have been performed, by the inferior numbers of the industrious classes, who doubtless existed, in the reign of King William. And from the foregoing reasonings, and facts, we may certainly conclude, with one of the ablest writers of any age, on political œconomy: "The liberal reward of labour, as it is the effect of increasing wealth, so it is the cause of increasing population: To complain of it [high wages] is to lament over the necessary effect and cause of the greatest public prosperity "\*. It is absurd, then, to argue, that as employments increase, population diminishes; that as hands are wanted, fewer hands should be found; and that as greater comforts are conferred on mankind, the natural propenfity of man to multiply, and to people the earth, should become less powerful, in its genial energies.

In calculating the numbers of people, we must attentively consider the state of society, in which they exist; whether as fishers and hunters, as shepherds and husbandmen, as manufacturers and traders; or as in a mixed condition, composed partly of each denomination. The American tribes, who represent the first, are sound to be inconsiderable in numbers; because they do not easily procure

<sup>\*</sup> See the Inquiry into the Causes of the Wealth of Nations, ch. 8; wherein Dr. Adam Smith treats Of the Wages of Labour, and incidentally of population, with a perspicuity, an elegance, and a force, which have been seldom equalled.

subsistence from their vast lakes, and unbounded forests, by fishing, and hunting. The Asiatic Tartars, who represent the second stage of society, are much more populous; fince they derive conti-nual plenty from their multitudinous flocks. But, even these are by no means equal in population to the Chinese, who acquire their comforts from an unremitting industry, which they employ in agriculture, in manufacture, in the arts, in fisheries, though not in navigation. It was foreign commerce, which peopled the marshes of the Adriatic, and the Baltic, during the middle ages; hence arose Venice, and the Hanse Towns, with their envied opulence, and naval power. It was the conjunction of agriculture, manufactures, and traffic, which filled the Low Countries with populous towns, with unexampled wealth, and with marvellous energy. The same causes, that produced all those effects, which history records, as to industry, riches, and strength, continue to produce similar effects, at present.

When England was a country of shepherds, and warriors, we have beheld her inconsiderable in numbers. When manufacturers found their way into the country, when husbandmen gradually acquired greater skill, and when the spirit of commerce at length actuated all; people, we have seen, grow out of the earth, amidst convulsions, famine, and warfare. He who compares the population of England and Wales at the Conquest, at the demise of Edward III. at the year 1588, with our popula-

population in 1688, must trace a vast progress, in the intervenient centuries. But, England can scarcely be regarded as a manufacturing, and commercial country, at the Revolution, when contrasted with her present prosperity, in manufacture, and trade. The theorist, then, who insists, that our numbers have thinned, as our employments have increased, and our population declined, as our agriculture and manufactures, our commerce and navigation, advanced, argues against facts, opposes experience, and shuts his eyes against daily observation.

Yet, Doctor Price, and his followers, contend, that our industrious classes have dwindled the most, since 1749, because it is from this epoch, that the prosperity of the people has been the greatest, however they may have, at any time, been governed. And the following argument is said to amount to demonstration, because it contains as strong a proof of progressive depopulation as assual surveys can give\*: The number of houses returned to the tax-office, as charged and chargeable, was, — — in 1750 — 729,048

in 1756 — 715,702 in 1759 — 704,053 in 1761 — 704,543

in 1777 - 701,473

For a moment, Doctor Price would not liften to the fuggestion, that the houses may

<sup>\*</sup> Dr. Price's Essay on Popul. p. 38.

have existed, though they were not included, in the returns of the intermediate years. But, lo! additional returns have been made up at the tax-office, amounting, — — in 1781 to 721,351.

in 1794 to 1,008,222.

This detail is sufficient to show, that the Doctor has failed in the proof, which was to outargue facts, to overthrow experience, and to convert the improbable into certainty.

As a supplemental proof \*, which may give

\* The chargeable houses, in 1781, under 10 windows, were -497,801 under 21 windows, -171,177 above 20 windows, - -52:373 721,351 Cottages 284,459 Total houses, and cottages, in 1781, -1,005,810 The houses in 1750 - 729,043 The cottages in 1756 -1,003,803 Increase since 1750

The account of cottages, in 1756, was completed, as appears from the tax-office books, on the 20th of November 1756. And thus, by adopting the mode, and the materials, of Doctor Price's argument, it is shewn, that he has been extremely mistaken, as to the depopulation of England, since 1750.

fatis-

fatisfaction to well-meaning minds, there is annexed a comparative view of the number of houses, in each county, as they appeared to King, and to Davenant, in the hearth-books of 1690; of the charged houses in 1708; of the chargeable houses in 1750; with the houses of the same description, in 1781. To this interesting document, is now added the number of houses, which were found in England, and Wales, by the enumeration of 1801:-This enumeration will be found to throw great light upon the comparative view of those various statements, which exhibit the numbers of houses, at those several epochs, in a mutilated state. This document has, at length, decided the queftion, which has been so often asked, whether the numbers of our houses have increased, or diminished, fince the Revolution, in 1688. I had previoully estimated the number of houses in England, and Wales, at 1,586,000, during 1781: the enumeration of 1801 has found them to amount to 1,632,431, inhabited, and uninhabited houses.

A COMPARATIVE VIEW of the Number of Houses, in each County of Engand Wales, as they appeared in the Hearth-books of Lady-Day 1690; as were made up at the Tax-office, in 1708—1750—1781; and, as they ap from the enumeration of 1801.

	Control of the Contro									-

From this instructive document, then, it appears, that the number of houses have increased, from 1690 A. D. to 1801, no fewer than 313,516 dwellings. And, thus, has demonstration decided, for ever, this pertinacious controversy, about the increase, or the diminution, of the people, since the great epoch of the Revolution. It has decided, also, another litigated point, whether the returns of the houses to the tax office "furnish as strong a proof, " as actual furveys can give." This dogma is now involved in the external difgrace of that affuming argument, which was to outargue facts, and to overthrow experience. From the comparative view before stated, it clearly appears, that twenty counties, including London, Westminster, and Middlefex, have actually increased, fince 1750. Let us take the example of Surrey, and Lancashire, which are stated, as having decreased in houses, and confequently, in people, fince 1750\*. It is apparent, that Surrey has been overflowed by London, during the last fifty years +. And of Lancashire, considering the vast augmentations of its domestic manufactures, and foreign trade, it is not too much to

<sup>\*</sup> The country commissioners often discharge, on appeal, houses, as not properly chargeable. This may occasion an apparent decrease.

<sup>†</sup> In the villages round London, there were baptized, during a period of twenty years, beginning with the Revolution - - - 20,782

During 20 years, beginning with 1758—60, or 61 39,383

affert, that it must have added to its houses, and people, one-fourth, since 1750\*.

But, it is said to be idle, and impertinent, to argue from the state of population in Yorkshire, or in Lancashire, since Dr. Price is ready to admit,

that

\* In fixteen parishes in Lancashire, exclusive of Manchester and Liverpool, there were baptized, in twenty years, about the Revolution - - 18,389 Ditto, from 1758 - - - 47,919

These proofs of a rapid increase of natural population are from Mr. Howlet's excellent Examination. It is an acknowledged fact, that Liverpool has doubled its inhabitants every five-and-twenty years, fince the year 1700.

Of houses, Liverpool contained in — 1753 — 3,700 in — 1773 — 5,928 in — 1783 — 6,819 in — 1788 — 7,690

Yet, were its houses returned to the tax-office,

in — 1777 at 3,974 and in — 1784 at 4,489

Manchester with Salford have equally increased.

Of houses, there were in both, in - 1773 - 4,268 in - 1783 - 6,178

Of which there were returned to the tax-office,

in 1777 — — 2,519 in 1784 — — 3,665

And it might be easily shewn, that the smaller towns, and villages, of Lancashire, have grown nearly in the same proportion; and this most prosperous county has, during the last 90 years, increased in the numbers of people with the boasted rapidity of the American states. Boston (in New-England) was fettled in 1633; yet, it did not contain twenty thousand inhabitants in 1775. Philadelphia was planted in 1682; yet, in its

that these have added many to their numbers\*. Yet, owing to what moral cause is it, that York and Lancashire, Chester and Derby, have acquired so many people? Is it owing to their manusactories, and trassic, and navigation, which augmented employments? Now, the same causes have produced the same effects, in the other counties of this fortunate island, in proportion as those causes have prevailed in each place.

It is pretended, however, that the aftonishing augmentation of our cities did not arise from births, amidst prosperity, and happiness, since many people were brought from other districts, by the allurements of gain. The additional labourers could not affuredly have come, in confiderable numbers, from those counties, which have fustained no diminution of people themselves; and in no European country is there less migration, from one parish to another, than in England. The principle of the poor laws checks population, by preventing the laborious poor, from looking for better employment, beyond the limits of their native parishes. Every one knows with what tyrannic rigour the law of settlements is enforced, by fending to their proper parishes the adventurous persons, who had found no employment at home. It is not, therefore, the migration of the adult from the country to the town,

its happiest days, it did not comprehend thirty thousand souls. The other towns of the American states, being much inferior to these, can still less be compared to the manufacturing villages of England, or to Paisley, in Scotland, in the quickness of their growth.

<sup>•</sup> Uncertainty of Population, p. 14-19.

that continually swells the amount of the busy multitudes, which are feen to fwarm, where the fpirit of diligence animates the people: and it is the employment, and habits of industry, which are given to children, in manufacturing towns, that add to the aggregate of dwellers in them, more than the arrival of strangers.

Having, in the foregoing manner, traced a gradual progress from The Conquest to The Revolution; having thus established, by the best proofs, which fuch an enquiry, without enumerations, admits, that the former current of population not only continued to run, but acquired a rapidity, and a fulness, as it flowed; we shall not find it difficult, since the chief objections are removed, to ascertain the probable amount of the prefent inhabitants. He who insists, that there were in England and Wales 1,300,000 inhabited houses in 1688, must equally allow, fince it has been proved, that of these there were 711,000, which were inhabited by persons, who either received alms, or gave none; and it has been equally shewn, that the necessary labour of the present day could not, by any possible exertions, be performed by the lower orders, who certainly existed, in 1688. Hence, it is reasonable to conclude, that, fince the 590,000 chargeable houses, in 1690, were accompanied with 710,000 dwellings of the poor, the 721,000 chargeable houses of 1781, must consequently be accompanied with 865,000 dwellings of the poor: For, fuch is the inference of just proportion. The distinct dwellings in England and Wales, when both classes are added together.

a

together, must be 1,586,000; which, if multiplied by 51, for the number of persons in each, would discover the whole numbers to be 8,447,200: But, there ought still to be an adequate allowance for empty houses, and for other circumstances of diminution; which, after every deduction, would shew the present population of England and Wales to be rather more than eight million. From the enumeration of 1801, we certainly find, that the numbers now are 9,330,000. And fuch an augmentation, as this would evince, fince the Revolution, is altogether confiftent with reason, with facts, and with experience.

Mr. Wallace, the learned antagonist of Mr. Hume, very justly remarks \*, " that it is not ow-" ing to the want of prolific virtue, but, to the dif-" treffed circumstances of mankind, every genera-"tion do not more than double themselves; which " would be the case, if every man were married at " the age of puberty, and could provide for a fa-" mily." He plainly evinces, that there might have eafily proceeded from the created pair 6,291,456 persons, in seven hundred years. From the foregoing discussions, we have seen an augmentation of four million and a half of people, during fix centuries and a quarter, of tyranny, of war, and of peftilence. But, when we confider the more frequent employments, and agreeable comforts, of the people, their fuperior freedom, and greater healthfulnefs, we may affüredly conclude, that there has been an augmentation of 2,830,000 fince The Revolution.

<sup>\*</sup> Differt on the Numbers of Mankind, p. 8.

Of this great increase of people, Ireland furnishes a remarkable example, though this kingdom has not always enjoyed, during the effluxion of the last century, a situation equally fortunate \*. Ireland has suffered, during this period, the miseries of civil war, which ended in the forseiture, and expulsion of thousands. In this period, also, multitudes constantly emigrated, either to exercise their industry, or to draw the sword, in foreign climes. Yet, are there abundant reasons to believe, that this prolific island has much more than trebled its inhabitants, in the last hundred years.

Sir William Petty, who possessed very minute details, with regard to the condition of Ireland, in the period, from the Restoration to the Revolution,

\* Though the hearth-books of England have funk into oblivion, the hearth-books of Ireland remain. From the produce of the hearth-tax may be traced its gradual rife, as in the fubjoined detail, which evinces the progress of population. It yielded, according to a five years average, ending

See Bibl. Harl. Brit. Mus. No 4706—Mr. A. Young's Tour in Ireland, the Appendix—and Mr. Howlet's Essay on the Population of Ireland, p. 19.

<sup>+</sup> Pol. Anatomy, p. 7-11-17-116.

stated the number of houses, in 1672†, at 200,020 The number returned by the tax-gatherers,

in 1791\*, was - - - 701,102

At the first epoch, the Irish nation had scarcely recovered from a long and destructive civil war. It is sufficiently known, that, notwithstanding the laudable efforts of the late Mr. Bushe, there are several houses omitted, which often happens, when interest may be promoted by concealment. Sir William Petty stated the whole population of Ireland, in 1672, at - - - - 1,100,000 souls.

Were we to multiply 701,102
house's of the year 1791, at 6
in each †, this would carry the
number up to - - -

\* See the account of houses given in to the Irish Parliament,

on the 22d March 1792.

† Mr. Bushe had obtained actual enumerations of the number of dwellers, in each house, throughout many places of Ireland, exclusive of Dublin, amounting to 87,895 fouls, in 14,108 houses, or nearly  $6\frac{\pi}{4}$  in each dwelling. But, Mr. Bushe went a step farther towards certainty, by getting the numbers, which dwelt in each kind of house: The houses of paupers had  $5\frac{\pi}{2}$  in each; in new houses were  $4\frac{\pi}{4}$ ; in houses with two hearths were 9; and in houses with one hearth were  $6\frac{\pi}{2}$  in each. Mr. Bushe, however, considered these numbers, as higher than the general average. And, from all these data, I have formed the following Table of the Population of Ireland, in 1791; shewing the number of each kind of persons, in that most populous kingdom:

483,990	houses of one hearth, at 6 in each	2,903,940
67,663	houses of two, or more, hearths, at 8 in	7 3 7 1
	each arms and	541,304.
15,025	houses, unascertained, whether of one	21 73 1
	hearth, or more, — at $6\frac{1}{3}$ in each	97,662
21,868	new houses, - at 4 in each	87,472
	paupers' houses, - at 5 in each	562,780
701,102	houses, containing of all kind of persons	4,193,158
		Were

Were we to admit this account, which has indeed been doubted, as merely an approximation to truth, it would demonstrate a still more considerable increase of people, than, as we have so many reasons for believing, took place, during the last hundred years, in England, which enjoyed more productive advantages. This example ought to be more convincing than many arguments.

The fame principles, which, in every age, influenced the population of England, and of Ireland, produced fimilar effects on the populousness of Scotland. When England, and Ireland, were poor, and depopulated, we may easily conjecture, that Scotland could not have been very opulent, or populous. As England, and Ireland, gradually, acquired inhabitants, we may presume Scotland followed their paths, though at a great distance behind. And, the accounts, which the ministers of the several parishes have lately transmitted to Sir John Sinclair, from enumerations, prove, that the people of Scotland have greatly increased, during the last eight-and-thirty years\*. An intelligent observer might form a satisfactory judgment of

<sup>\*</sup> The numbers of inhabitants, which the ministers of the feveral parishes, in Scotland, have returned to Sir J. Sinclair, amount to 1,526,492: whereby it appears, that there has been an augmentation of 261,112, souls on 1,265,380, which were the numbers, about the year 1755. And thus, this litigated question seems to be decided, as to Scotland, from actual enumerations.

the previous condition of England and Scotland, from the accurate statements, whereon their union was formed.

The public revenue of England was £. 5,691,803 of Scotland

Of the trade of both, we may determine from the custom-house duties, which, in England, were - - £. 1,341,559 in Scotland = -

The gross income of the posts was, £. 101,101 in England in Scotland 1,194

Of the circulation of both, we may form an opinion from the re-coinage of both. There were re-coined in England, during King William's reign £. 8,400,000 in Scotland, foon after the Union 411,118

We may decide, with regard to the confumption of both, from the exciseduties; which, in England, amounted to £. 947,602 in Scotland, to 33,500

From

From those details \* it is reasonable to infer, that Scotland possessed, in those days, no flourishing husbandry, few manufactories, little commerce, and less circulation, though there had certainly been a considerable advance, in all these, during the two preceding centuries. "Numbers of people, the greatest riches of other nations," faid Mr. Law †, in 1705, "are a burden to us; the land is not improved; the product is not manufactured; the fishing, and other advantages of foreign trade, are neglected." Such was the deplorable state of Scotland, at the epoch of her happy union with England!

The Scots were, for years, too much engaged in religious, and political, controverfy, to derive from that fortunate event, all the advantages which, at length, have undoubtedly flowed from it. Their misfortunes, arising chiefly from these evils, have, however, conferred on them the most invigorating benefits. The laws, that a wise policy enacted, created greater personal independence, and established better safeguards for property, which have produced the usual effects of a more animating industry. Of the intermediate improvements of their tillage we may form some judgment from the rise of rents, and the advance of the purchase-money for land, which must have necessarily proceeded from a

<sup>\*</sup> See the elaborate and very curious History of the Union by De Foe, republished by Stockdale; and Ruddiman's preface to Anderson's Diplomata.

<sup>+</sup> Considerations on Money and Trade.

better husbandry, or a greater opulence. The manufactories, which the Scots doubtless possessed, in 1707, though to no confiderable extent, have not only been greatly enlarged\*, but to the old, new ones have mean while been added. The value of the whole exports by sea, amounted, at the epoch of the Union, if we may believe Mr. Law, to about 1.300,000! The whole of these exports were carried up, before the colony war began, to f. 1,800,000, if we may credit the custom-house books. The tonnage of shipping, which annually entered the ports of Scotland, at the first æra, was only 10,000 +; but, at the last, 93,000 tons. foregoing statements, general as they are, will evince to every intelligent mind, how much the commerce, and navigation, of Scotland have increafed, fince the hearts and hands of the two kingdoms were fortunately joined together, and how many useful people she has added to her original numbers.

Of the traffic of Scotland, it ought to be however remarked,

<sup>\*</sup> The quantity of linen made for fale in Scotland, during 1728, was only 2,000,000 yards; but, in 1775, 12,000,000. The linen is the chief manufacture of Scotland; and, were we to regard this as a proper representative of the whole, we might from this infer a very considerable augmentation in every other manufacture.

<sup>†</sup> In the Harl. MSS. No. 6269, Brit. Mus. there is a list of the ships belonging to Scotland, (as they were entered in the Register General kept at London) and Trading in the ports

remarked, that it is more easily driven from its course than the English, either by internal missortunes, or by foreign warfare; because it is less firmly established; it is supported by smaller capitals; and it is less extensive in its range. The bankruptcies of 1772 deducted nearly £. 300,000 from the annual exports of Scotland. The commercial events indeed of our two last wars would alone justify this remark. Let us compare, then, the exports of Scotland, when they were the lowest, during the war of 1756, with the lowest exports of the colony-war, and the highest exports of the first, with the highest of the second; because we shall thereby see the depressions, and elevations, of both:

of that kingdom, from Christmas 1707, to Christmas 1712, distinguishing those belonging to Scotland, prior to the Union, as follows:

20101101101		
	Veffels.	Tons.
Total — — —	1,123 -	50,232
Prior to the Union — —	215 —	14,485
Increase -	908 -	35,747
There belonged to Scotland, in 1792, of		33-1 (1
vessels, which entered only once -	2,116 —	154,857
Of 1:1 amplement in annual in	ANTON SANDAN	
Of which were employed, in 1792, in		
Foreign trade	718 —	84,027
Coast trade — — —	1,022 -	50,940
Fishing shallops, &c	376 —	
	-	
The total — —	2,116 —	1.54.857
		77,-77

Those comparative statements evince undoubtedly a very confiderable increase of shipping in the intermediate period.

## The Value of Exports,

in 1756	- £.535,577 - 628,049	 in 1778	<del> 702,820</del>
	- 828,577 - 1,086,205		games constitution and a
	- 1,165,722 - 998,165		

When we recollect, that Great Britain was engaged, during the last war with her colonies, which occupied fo much of the foreign trade of Scotland, with France, with Spain, and with Holland, we ought not to be furprifed, that fo much should be loft, as that fo much should remain, at the end of eight years hostilities. It was deranged, but it was not ruined, as had been predicted, in 1774. And, when the various pressures of this most distressful war were removed, though with a tardy hand, it began to rise; yet not with the elasticity of 1763; because the colony commerce, which furnished so many of the exports of Scotland, had been turned into other channels. But, the following detail will enable us to form a more accurate judgment, with regard to this interesting subject:

### The Value of Exports from Scotland,

in 1762 — £.998,165 — in 1782	- 1.053,709
in 1763 — 1,091,436 —— in 1783	
in 1764 — 1,243,927 — in 1784	
in 1765 — 1,180,867 — in 1785	- 1,007,635

It ought, however, to be remembered, that in the first period, complete peace was established in 1763; but, in the last, it was not fully restored till the middle of 1784. Yet, the shipping of Scotland will be found, as we have already perceived the ships to be in England, our most infallible guides; because, the entries of ships are more accurately taken than the value of cargoes, and trade can scarcely be said to decline, while our vessels increase. Let us attend, then, to the following detail of ships, which entered in the ports of Scotland, during the following years, both before, and after, the late war:

```
Foreign Trade. Coast Trade. Fishing, &c. in 1769 - 48,271 tons. 21,615 tons. 10,275 tons. in 1774 - 52,225 - 26,214 - 14,903 in 1784 - 50,386 - 31,542 - 10,421 in 1785 - 60,356 - 36,371 - 11,252*.
```

It is apparent then, that though the foreign trade of Scotland was somewhat inferior, in 1784,

\* The custom-house account, from which the above detail is taken, states the ships to belong to Scotland, accounting each wessel only one woyage in every year. This comparative estimate of the shipping, which were employed in the foreign, or overfea, trade of Scotland, may be carried back to the peace of 1763. Thus, there were employed, in foreign voyages,

```
in 1759 = 22,902 tons, in 1761 - 31,411 tons.
in 1763 - 33,352 in 1764 - 41,076
in 1782 - 40,530 in 1792 - 84,027
```

Whence, we may undoubtedly conclude, that Scotland possesses a much greater navigation at present, than at the peace of 1763, or at any prior epoch.

to that of 1774, it was equally superior to that of 1769, as that of 1785 was to that of 1774: That the coast trade was much greater, in 1785, than ever it had been in any prior year: And, that the fishing business of 1785 was more extensive than it had been in 1769, but much more confined than in 1774, if we may implicitly credit the custom-house books.

However the foreign trade of Scotland may have been depressed by the colony-war, there is reason to believe, that she has thereby added to her domestic manufactures. The commercial capitals, which could no longer be employed abroad, were at length more usefully laid out at home. Instead of promoting the labour of other countries, these capitals surnished employment to many hands, within the kingdom. And, Scotland has, by these means, extended her valuable manufacture of gauzes; she has augmented the number of her print-fields; she has acquired every branch of the cotton business; and she has greatly increased her linens\*. Thus it is, that an active people may

\* Of Linens there were made for fale;

in 1772 - 13,089,006 yards. — in 1782 - 15,348,744 yards.

1773 - 10,748,110 — 1783 - 17,074,777

1774 - 11,422,115 — 1784 - 19,138,593

1792 - 21,065,386

The greater number of shipping, which are at present employed, than before the war, in the coast-trade of Scotland, seems also to evince an augmentation of domestic commerce.

This comfortable truth is also proved by the increase of the

be even enriched, by throwing obstructions in the way of their foreign commerce. And, if productive labour constitute genuine wealth, the Scots may be regarded, at present, as a nation more industrious, opulent, and populous, than they were before the colony-war began, and much more than at the epoch of the Union.

These observations apply equally to England. Every occurrence, which at any time turned additional capitals into domestic employments, necesfarily contributed to improve the agriculture, to augment the manufactures, to increase the wealth, and to add to the population of the country, by yielding a greater quantity of productive labour. Ireland, we have clearly feen, add millions to her numbers, in the short period of little more than a century, amidst civil war, and frequent emigrations. Scotland, we have also beheld, add greatly to her effective population, in the effluxion of forty years. And, England, like every other civilized country, must, of consequence, have made many additions to her populousness, during the busy course of the last hundred years. An argument was brought forward, with the parade of confidence, to prove a contrary polition. But, after a fair examination, this argument, if it merit that dignified name, has

export by fea of Scotch manufactures; of which there were thus exported, according to a three years average, ending with 1774, the value of — — £.478,347 Ditto, with 1792 — 888,425

been found to have at least the pertinacity of factiousness, if it have not the frivolousness of folly. Let all, then, who, like true philosophers, reason from facts, and deduce from experience,

" Leave such to trifle with more grace and ease,

"Whom folly pleases, or whose follies please."

## CHAP. XII.

A Review of the foregoing Documents proposed.—A fupplemental Proof from a Chronological Table of Commerce.—A Commentary thereon.—The successive Epochs from 1660 to 1793.—The Tonnage of Shipping.—The Value of exported Cargoes.—The Balance of Trade. — The nett Customs. — The Amount of the Coinage in that long Period.—The Conclusion of this Review, which reflects a flattering Prospect of our future Prosperity.

A REVIEW of the several documents, which are contained in the foregoing Estimate, would greatly illustrate the interesting subject of the prosperity, and populousness, of Great Britain. As a supplemental proof, I have annexed a chronological account of commerce, in this island, from the Restoration to the year 1793, with design to exhibit a more connected view of the weakness of its commencement, the struggles of its progression, and the greatness of its maturity, than has yet been done. This chronological Table will speak to the eye, while it convinces the understanding, and comforts the heart. And, the commentary on the various heads of this Table will furnish opportunities, which did occur before, of treating of many topics that, as they confirm the doubtful, and illustrate the dark, will throw a very pleasant light on our future prosperity, by taking a short retrospect of the past.

Of the chronological table, the eye-instantly perceives the disposition of the parts, and the intellect fully comprehends the arrangement of the whole. In the first column may be seen the successive epochs, beginning with the Restoration, whence certainty may be faid to commence, and ending with the year 1792. The fecond column gives the tonnage of the shipping, which successively sailed from England, distinguishing the English from the foreign, in order to find, in the amount of each, the falutary effects of the act of navigation, The third column contains the value of the merchandize, which were from year after year fent out, that the extent of the cargoes may be compared with the quantity of tonnage, which carried them: and, though the Scotch tonnage could not be adjoined, the value of the Scotch exports is added, because every one finds a gratification, in extending his views. The fourth column exhibits the refult of our exports and imports compared, which forms what has been denominated the balance of trade. The fifth column states the nett customs, which our foreign commerce has yielded, at different periods, because, while the detail gratifies curiofity, it furnishes no inconfiderable proof of the prosperity, or decline, of our traffic. And the last column contains, what may be regarded, as the refult of the whole, the fums, which have been coined in England, during every reign, from the Restoration to the 25th of March

March 1793; because the mint, as Sir Robert Cotton expresses it, is the pulse of the commonwealth.

That the progress of our trassic, and navigation, from the commencement of the seventeenth century, to the ara of the Restoration, had been remarkably rapid, all mercantile writers feem to admit. The navigation act contributed greatly to carry this advance up to the Revolution. Sir William Petty stated, in 1670, "that the shipping of England had trebled in forty years." Doctor Davenant afterwards afferted\*, " that experienced merchants did agree, that we had, in 1688, near double the tonnage of trading shipping to what we had in 1666." And Anderson + inferred, from the concurring testimony of authors on this interesting subject, "that the English nation was in the zenith of commercial prosperity at the Revolution." We have already examined how much the commercial gain of our traders was taken away by the war, which immediately followed that most important event in our annals. But the eye must be again thrown over the chronological table, if the reader wish for a more comprehensive view of the continual progress of navigation, from the station of eminence, to which Anderson had traced it; its temporary interruptions; and, notwithstanding the independence of the American states, its final exaltation, in the year 1792,

<sup>\*</sup> Vol. ii. p. 29.

<sup>+</sup> Commerce, vol. ii. p. 187.

If we compare the greatness of 1688, with the amount of 1774, 1784, and 1792, we shall difcover, that the navigation of the latter epochs had reached a point of the mercantile heavens, so much more exalted than the former, as to reverse its position; as to convert what was once the zenith into the nadir now.

Tons English. Do foreign. Total. Contrast 1688 - 190,533 - 95,267 - 285,800 with 1774 - 798,240 - 65,273 - 863,513 with 1784 - 846,355 - 113,064 - 959,419 with 1792 - 1,396,003 - 169,151 - 1,565,154

The famous Mr. Gregory King calculated\*, "that we gained annually on the freight of English shipping, in 1688. -f. 810,000." If the "national profit on the naval trade of England, in 1688," amounted to f. 810,000, what ought to have been the national profit on our naval trade, in 1774? If 190,000 tons gained f. 810,000, 790,000 tons must have gained -1.3,367,839. 940,000 tons, including the Scots ships, must also have gained, in

1784, - f. 4,060,000. And, 1,561,158 tons, including the Scots, must have gained, in 1792, £. 6,655,463.

<sup>&</sup>quot; Day. Works, vol. iv. p. 146.

This is doubtless a vast sum to be annually gained from our outward freights; but, great as it appears, in a mere mercantile light, when as large a fum is added to it, for our inward freights, the immense navigation, from whence it arises. must be considered as still more advantageous to the state, being a never-failing source, from which feamen, and transports, may be constantly drawn for the uses of war. If from the tonnage, which may be most safely followed, in discovering the benefits of our navigation, and commerce, during every age, we look into the column of cargoes, in the chronological table, we shall find an excellent auxiliary, in the ledger of the infpector-general, for conducting our inquiries, and forming our judgments.

To investigate the value of our exports, and of our imports, during the disturbed times of our Edwards, and Henries, or even in the more tranquil days of Elizabeth, would be a research of curiosity, rather than of use. On a subject of such distinct discussion, as no sufficient data had yet been established, the most judicious calculators could only speak in terms indefinite, and therefore unsatisfactory: yet Sir William Petty, Sir Josiah Child, Dr. Davenant, and Mr. Locke, all agreed in afferting, that our commerce slourished extremely from 1666 to 1688, when it had increased beyond all former example; and when its general growth, in the opinion of the most experienced merchants, was double in its magnitude at the Revolution, to

its

its usual extent at the Restoration. In the chronological table, the value of exported commodities was adjusted for both those periods, by a standard, which seems to be thus admitted as just, by the wifest men in England.

During that day of commercial darkness, the experienced Sir Philip Meadows, whose presence for so many years did honour to the Board of Trade, sat down to form "a general estimate of the trade of England," from the amount of the duties, which were paid, at the custom-house, on our importations, and on our exports. Directed by his native sagacity, he produced a statement of our commerce, on an average of the three years of war 1694—95—96; which appears now, from a comparison with the entries in the ledger of the inspector-general, to have been wonderfully exact.

The value of exports\*, according to
Sir Philip's calculation, - - £. 3,124,000
D°, according to the ledger, from Michaelmas 1696 to D° 1697 - - 3,525,907

But, Sir P. Meadows excluded from his calculation the value of butter, cheese, candles, beef, pork, and other provisions exported to the Plantations, and the value of their products imported into England, which were afterwards confumed; "being in the nature of our coast-trade among our own people." Had he included these, his statement had been still nearer in its amount to the ledger of the inspectorgeneral.

The value of imports, ac	cording to	1, 5
him,		3,050,000
D°, according to the ledger	,	3,482,587
The favourable balance of	trade, ac-	-
cording to him, -	-	£. 74,000
D°, according to the ledger	,	43,341

In the foregoing detail, from which we may afcertain, by comparison, nearly the truth, we behold the inconsiderable extent of the national commerce, at the peace of Ryswick, in 1697. If, said that able statesman, the present condition of England be not satisfactory to the public, from the general account of it here mentioned, various ways may be followed to improve it: And his fuggestions having been gradually adopted, in after times, produced, at length, the wished-for effects of an active industry at home, and a prosperous navigation abroad. From that epoch, we have in the books of the inspector-general all the certainty, with regard to the annual amount of our exports, and our imports, which the nature of fuch complicated transactions easily admit. But, should the nation wish for more satisfactory evidence, on a fubject fo interesting, because it involves in it the welfare of the state, the same motion, which was made in the House of Commons by Mr. Lownds\*, during

<sup>\* &</sup>quot;In order to prevent this mischief [of exaggerated entries] says Davenant, a clause was offered, and very much insisted

during the reign of Queen Anne, to oblige the traders to make true entries of their cargoes, may be again proposed, and, if it can be freed from objection, carried into effect, by parliamentary re-

gulations.

Mean time, the tonnage of shipping, which transported the superfluous products of England, has been adjoined, in the foregoing table, to the value of cargoes, in order to supply any defect of proof, and to corroborate the certainty of each, by a fair comparison of both. When Sir Philip Meadows confidered, with fo much attention, our commercial affairs, he gave it as his opinion, "that the advantage of trade cannot be computed by any general measure better than by that of the navigation." It requires not, indeed, the grasp of Sir Philip's mind to perceive, that the tonnage is naturally the evidence the most to be relied on, where there is any doubt: in this mode of proof there is no fiction: the entries are made at the Custom-house, on the oath of the masters; though the tonnage was supposed to contain formerly about one-third less than the truth: but, the general average being once known and admitted, we may argue from the apparent amount, with no more dread of deception, than we should expect from the notices of the most authentic record. In comparing the value of the cargoes with the ex-

infished on by Mr. Lownds, but obstructed by the merchants, for ends not very justifiable, and the clause was not received." Dav. vol. v. Whitworth's edit. p. 443.

tent of the tonnage, as both are stated in the foregoing table, we ought to infer, that the first must always be superior in its risings, and depreffions, to the last. It was with a view to that comparison and this correspondence, that the bullion, whose annual exportation for so many years frightened the gravest politicians, was deducted from the value of the transported merchandize; fince it occupied little room in the tonnage, yet fwelled confiderably the calculation of the general cargo: But, the exported bullion was retained, in forming the balances of trade, because, though it cannot properly be confidered as a manufacture, it ought nevertheless to be deemed a very valuable part of our actual wealth, which we fend abroad, in expectation of a profitable return.

Thus, we see in the foregoing documents the best evidence, with regard to our navigation, and our trade, that the nature of the enquiry admits. He who wishes to satisfy his doubts, or to gain information, by throwing his eye over the state of our exports from 1696 to 1774, as it has been published by Sir Charles Whitworth, or the value of cargoes which have been exported during the present reign, as they have been arranged in the foregoing table, must perceive, that when one year furnishes a great exportation, the next supplies the foreign markets with less; the third usually sends a cargo superior to the first; and the fourth gives often a smaller quantity than the last, the amount of which however is seldom below the

level of the first. This striking variation arises chiefly from the irregularities of universal demand, fince foreign fairs are fometimes empty, and fometimes full; and partly from the speculations, perhaps the caprice, of traders. And it has been shewn, from the most satisfactory proofs, that the year of profound peace, which immediately fucceeds the conclusion of a lengthened war, always exhibits a great exportation, because every merchant makes haste to be rich: Thus, 1698, 1714, 1749, 1764, and 1785, form epochs of great relative traffic. But, it is from the averages of distant years, at given periods, that we can only form a decided opinion, with regard to the real prosperity, or decay, either of commerce, or of navigation: Thus, from the Restoration to the Revolution, the foreign trade of England had doubled in its amount: from the peace of Ryswick to the demife of King William, it had nearly rifen in the same proportion. During the first thirty years of the current century, it had again doubled: and from the year 1750 to 1774, notwithstanding the interruptions of an eight-years intervenient war, it appears to have gained more than one-fourth. We had four times more trade, and five times more shipping, in 1792, than the nation enjoyed, in 1702\*.

Though the late war feems to have been levelled rather against the industry of the manufacturer and the projects of the merchant, than

<sup>\*</sup> See the chronological Table, p. 234.

against the force of our fleets, or the power of our armies; though repeated blows of unusual severity were given to our navigation, and our traffic; yet our domestic diligence pursues with unabated ardour its usual occupations; the number of our shipping at present is great beyond example; and our trade, which was said to be almost undone, still rises superior to its losses, and bids defiance to prophecy. Let these considerations comfort every lover of his country, since it is difficult to animate the despondent, and it is impossible to convince the incredulous.

If from those exhilarating topics, we turn to the column in the chronological table, which is occupied by the balance of trade, we shall find rather a more melancholy topic. No disquisition has engaged the pens of a more numerous class of writers, than that fruitful subject; who all complained of the difficulty of their labours, as they were each directed by feeble lights; and who warned their readers of the uncertainty of their conclusions, because their calculations had been formed on very disputable data.

In reviewing their performances, how amufing is it to observe, that though the sagacious Petty, and the experienced Child, the prosound Temple, and the intelligent Davenant, had all taken it for granted, as a postulate, which could not be disputed, that a balance of trade, either favourable, or disadvantageous, enriched, or impoverished, every commercial country—a writer, as able as the ablest of them, should have at length appeared, who denied

the

The late Mr. Hume feems to have written his fine Essay on the Balance of Trade, partly with design to throw a discredit on the declamations of Mr. Gee, "which had struck the nation with an universal panic," perhaps more with the laudable purpose of convincing the public "of the impossibility of our losing our money, by a wrong balance, as long as we preserve our people, and our industry."

Whatever wife men may determine with regard to this curious, perhaps important speculation, reason mean while afferts, what experience seems to confirm, "that there is a certain quantity of bullion fent by one nation to another, to pay for what they have not been able to compensate by the barter of commodities, or by the remittance of bills of exchange; which may be therefore deemed the balance of trade." And a writer on political œconomy, who is equal to Mr. Hume in reach of capacity, and fuperior to him in accuracy of argument, the late Sir James Stewart, has examined his reasonings, and overturned his fystem, which is elegant in its structure, but weak in its foundation. It behoves us, therefore, to look a little more narrowly into the state of the traffic, which Britain carries on with the world, in order to discover, if possible, how much bullion she pays to each of her commercial correspondents, or how much she receives from them.

Admitting that the apparent tide of payments flowed against this island, anterior to the Revolution, it does not seem easy to discover the exact

point of time, when it began to ebb, in a contrary direction.

Sir Philip Meadows, we have feen,	
found a balance in our favour, on	
an average of the business of 1694	
-5-6, of -	L.74,000
The ledger of the inspector-general	
shewed a balance, on the traffic of	
1697, of — — —	43,341,
The re-establishment of peace gave	
us a return, in 1698, of	1,789,744.
But, an increase of imports reduced	
the balance, in 1699, to —	1,080,497.
And an augmentation of exports	
again raised the balance, in 1700,	
ţQ transit direkt, amerika	1,332,541.
	-

We now behold the dawn of knowledge, in refpect to this interesting part of our occonomy, which has at all times been the most enveloped in darkness, and which sometimes introduced all the unpleasantness of uncertainty, and entailed too often the gloom of despondence. But, it ought to be remembered, that whether we import more than we export, is a mere question of fact, which depends on no one's opinion, since, like all other disputable facts, it may be proved by evidence.

We must recur once more to the ledger of the inspector-general of our foreign trade, as the best evidence, which the nature of the inquiry can fur-

nish,

nish, or perhaps ought to be required. After admitting the force of every objection, that has been made against the entries at the custom-house, we may apply to that curious record of our traffic, what the Lord Chief Justice Hale \* asserted, with regard to the parish registers of births and burials, "that it gives a greater demonstration than a hundred notional arguments can either evince or confute." It was from that fource of accurate information, that the balances were drawn, which are inferted in the foregoing chronological table; and it requires only " a fnatch of fight" to perceive all the fluctuations of our mercantile dealings with the world, as they were directed by our activity, or our caprice, or remissiness; and to decide, with regard to the extent of our gains, at every period, by the fettlement of our grand account of profit, and lofs, on every commercial adventure. One truth must be admitted, which has been considered by fome as a melancholy one, because they inferred from it, "that we were driving a losing trade," that the apparent balance has been less favourable in the prefent than in the preceding reign. In order to account for this unwelcome notice, it has been infifted that, as we grew more opulent, we became more luxurious, and, as our voluptuousness increased, our industry diminished, till, in the progress of our folly, we found a delight in facrificing our diligence, and œconomy, to

<sup>\*</sup> Origination of Mankind, p. 207.

the gratifications of a pleasurable moment, du-

ring a diffipated age.

But, declamation is oftener used to conceal the bewitching errors of fophistry, than to investigate the instructive deductions of truth. Considering the balance of trade as an interesting subject to a commercial nation, it must be deemed not only of use, but of importance, to enquire minutely which of our mercantile correspondents are our debtors, and which are our creditors; and to state, which country remits us a favourable balance, and to which we are obliged, in our turn, to pay one. Nor, is it satisfactory to contrast the general balances of different periods, in order to form general conclusions, which may be either just, or fallacious, as circumstances are attended to, or neglected. From a particular statement it will clearly appear, that we trade with the greater number of the nations of Europe on an advantageous ground; with few of them on an unfavourable one; that fome states, as Italy, Turkey, and Venice, may be confidered as of a doubtful kind, because they are not, in their balances, either constantly favourable, or unfavourable. To banish uncertainty from disquisition is always of importance. this defign, it is proposed to state an average of the balance of apparent payments, which were made, during the years 1771-2-3 to England, by each corresponding community, or which she made to them: and the averages of these years are taken, in order to discover the genuine balance of trade on the whole,

whole, fince they feemed to be the least affected by the approaching storm. Where the scale of remittance vibrates in suspence, between the countries of doubtful payments, an average of six years is taken, deducting the adverse excesses of import, and of export, from each other.

Let us examine the following detail of our European commerce:

Countries of favoura	ible balances.	Countries of unfavourable balances.			
Denmark and Norwa	ay —£. 78,478	East country [doubtful] £.100,230			
Flanders —	- 780,088	Russia — 822,607			
France -	- 190,605	Sweden — — 117,365

## Let us now recapitulate the foregoing balances:

Gained on our European commerce — — £. 3 636,504  Deduct the loss on the trade of our factories — 448,212
Gained on the balance of our colony commerce — £. 3,187,596 — 261,291
Nett balance gained on the trade of England — 5.3,443,887  Nett balance gained on the trade of Scotland, according 435,957  to an average of 1771—2—3
Nett gain on the British commerce in 1771—2—3 — £. 3,884,844 Ditto — in 1792 — 5,776,615

Of an extensive building, we vainly attempt to form an accurate judgment of the proportion of the parts, or the beauty of the whole, without measuring the fize of the columns, and examining the congruity of the refult, by the fuitableness of every dimension. Of the British commerce, so luxuriant in its shoots, and so interwoven in its branches, it is equally impossible to discover the total, or relative, products, without calculating the gain, or loss, that ultimately results to the nation, from every market. Thus, in the foregoing statement, we perceive, which of our European cuftomers pay us a balance, favourable and constant; which of them are fometimes our debtors, and at other times our creditors; which of them continually draw an unfavourable balance from us: and, by opposing the averages of the profits, and losses, of every annual adventure to each other. we at length discover, from the result, the vast amount of our gains. The mercantile transactions at our factories in Africa, and Afia, were stated against

against each other, because they seemed to be of a fimilar nature. But, whether we ought to confider the balance of f. 448,912 as absolutely lost, must depend on the essential circumstance, whether we confume at home the merchandizes of the East, or, by exporting them for the consumption of ftrangers, we draw back with interest what we had only advanced: should the nation prefer the beautiful manufactures of the Indian to her own, we ought to regard her prudence as on a level with the indifcretion of the milliner, who adorns her own person with the gaudy attire, which she had prepared for the ornament of the great and the gay. Our former colonies were stated against each other, in order to shew the relative advantage of each, as well as the real importance of the whole. Of the valuable products imported from them, which feem to form so great a balance against the nation, we ought to observe, that they are either gainful, or difadvantageous, as we apply them: we gain by the tobacco, the fugars, the spirits, the drugs, the dying-woods, which we re-export to our neighbours: we lose by what we unnecessarily waste.

The colony-war has added greatly to our ancient stock of experience, by exhibiting the state of our commerce, in various lights, as it was forced into different channels. The balance of trade has thence assumed a new appearance, as it is shewn by the custom-house books. While the exports were depressed for a time, as they had been still more by former wars, the imports rose in the

fame

fame proportion. The value of both, from England, was,

		Exports.		/ Imports.

-				

The number of ships, which, during those years, entered inwards, have also increased fully equal to the augmented value of cargoes. But, were we to form a judgment of the balance of trade by the difference, which thus appears from the custom-house books, we should be led to manifest error. Let us take the year 1784 for an example. Thus shood

Yet, these £.4,532,455, consisting of the importations from our factories, our colonies, and fishery, create no legitimate balance, however much this vast sum may deduct from the apparent balance of the custom-house account. The same statement, and the same observation, may be made with regard to the trade of Scotland. To this may be added, a melancholy truth, that we have the export of corn, to the annual value of a million.

million, which is faid to be owing rather to an increase of people, than to a decline of agriculture, and which passed with so much advantage into the balance of 1749—50—51. In years of scarcity, we now import large quantities of corn; and when so great a sum is taken from the one scale, and thrown into the other, the difference on the apparent balance must necessarily be immense.

Of the truth of these reasonings, and of these facts, the general exchanges, which are univerfally admitted to have been, for fome years, extremely favourable to Great Britain, are a sufficient confirmation. When there exists no disorder in the coin, the exchange is no bad test, though it is not an absolute proof, on which side the balance of payments turns, whether against a commercial country, or for it. The vast importations of foreign coin and bullion, fince the establishment of peace, prove how much and how generally the exchanges have run in favour of this enterprifing nation. And the price of bullion, which, during this period, has been much lower than had ever been known, leads us to infer, that the extent of those importations has been proportionally great.

In confidering the balance of trade, it is to be lamented, that we cannot obtain, from the tonnage of veffels, entering inwards, the fame fatisfactory information, as we have already gained from the numbers of shipping, which, having carried out the merchandizes, were brought as a confirmation of the value of exported cargoes:

for, the materials of manufacture, being much bulkier than the manufactures themselves, require a greater number of transports. It may, however, give a new view of an engaging subject, to see the tonnage of vessels, which entered inwards at different periods, compared with the supposed balance of trade.

Epochs.

neral

From the foregoing facts, men will probably draw their inferences, with regard to our debility, and decline, or to our healthfulness, and advancement, according to their usual modes of thinking, to their accustomed gloominess, or hilarity, of mind, or to the effusions of the company, which they commonly keep. One party, taking it for granted, amid their anxieties, that the national commerce, domestic and foreign, is in the last stage of a confumption, may possibly attribute a supposed idleness, and inattention, to the excessive luxury, in kind the most pernicious, in extent the most extravagant, which deeply pervade every order: the other party, directed in their inquiries by an habitual cheerfulness, may perhaps determine, from the busy occupations, which they fee in the shop, and the field, as to our activity and attention, the natural forerunners of prosperity, and acquisition; thinking that they perceive, in the heavy loaded ships, as they arrive, the materials of a manufacture, extensive and increasing. If any one wish for the aid of experience, in fixing his judgment, he need only examine the affairs of the American States, and of Ireland, during the effluxion of the last hundred years. A great balance of trade flood conftantly against both those countries; yet, both have more than trebled the numbers of their people, the amount of their productive labour, the value of their exported merchandize, and the extent of their real wealth. Fast has, at length, interposed to give certainty to doubt; and demonstration has arrived to disper gloominess, and to strengthen hope. The late Inspector-Ge-

neral of the Customs, Mr. Irving, whose services to the public will not foon be forgotten; and who, indeed, ought never to be mentioned but with praise; stated to the Committee of Secrecy of the House of Lords, from the details before him, that our balance of trade, according to a four years average, ended in January 1796, amounted to ten million and a half, yearly; including, indeed, four million, as the annual profits of our East, and West, India trades; and supposing, that the value of British manufactures exported, exceeded the Customhouse value, about thirty per cent.—But, it has, fince, been ascertained, by the duties collected under the convoy act, that the value of British manufactures exported, exceed the Custom-house value by forty per cent.

From the balance of trade, which, as an interesting subject, seemed to merit ample discussion, it is proper to advert to the column of customs, in the chronological table; because we may derive a supplemental proof of the successive increase of our trade, of our commercial knowledge, and of our real opulence. These duties had their commencement from the act of tonnage and poundage, at the Restoration, when the whole customs did not much exceed f. 400,000. This law, which imposed 5 per cent. of the value on goods exported, as well as on goods imported, on domestic manufactures, as well as on foreign merchandizes; and which laid particular taxes on our own woollens, and double taxes on all goods, when fent out by aliens; was furely framed by no very judicious plan, though two and a half

per cent. of the value were allowed to be drawn back on goods that, having been imported, should be fent out in a twelvemonth. The publications of Mun, of Fortrey, and of Child, soon after the Refloration, diffused more universal acquaintance with commercial legislation. The alien duties on the export of native commodities, and domestic manufactures, were judiciously repealed, in 1673. The taxes on the exportation of woollens, of corn, meal, and bread, were happily removed in 1700. Yet, it was not till 1722 that, on a systematic consideration of the burdens, which obstructed trade, all duties on the export of British manufactures were withdrawn, except on a few articles, which, being regarded as materials, were still to be fent to rival nations with discouragements. These meliorations were doubtless considerable incentives to exportation, by enabling the merchants to fend the goods fo much cheaper to market. But, the imports were difcouraged then, and have been fucceffively burdened with new fubfidies, and additional duties, till the nett revenue of customs, after various improvements, swelled to £.4,027,230, in 1792\*, and to £.7,538,355

<sup>\*</sup> When the eye is thrown over the column of Customs, in the Chronological Table, especially since the year 1785, it immediately perceives inequalities, in the produce of particular years, which were owing to particular causes. Suspended duties, which were due from the East India Company, in the years 1782, and 1783, were paid in 1785, and in 1786. The regulations of wine, which took place on the 5th of July 1786, and on tobacco, the 16th of October 1789, made great changes in

£.7,538,355 fince, in the progress of war, and taxation.

The column of coinage was introduced, in the last place, as its proper station; because the increase of coins, by means of the operations of the mint, arise generally from the profits of commerce, at least from the demand of circulation: and of consequence, the quantity of circulating money must, in every country, be in proportion, nearly, to the extent of business, or frequency of transfers. The sears of men, with regard to a wrong balance of trade, have not been at any time greater than the continual dread of a total deprivation of our coins. And both have produced a numerous class of writers, who have published their theories, not so much, perhaps, to enlighten the world, as to give vent to their lamentations.

While the rents of the land were paid in its products; while the freemen contributed personal service, instead of a specified tax; and while the arts had not yet been divided into their classes, there would be little use for the convenient measure of coins. The conversion of almost every service, and duty, into a payment of money marks a considerable change in our domestic affairs. And in proportion as resinement gained ground of rude-

the customs. And, by the Consolidation-Act, which commenced in 1787, a considerable advantage was gained for the revenue of customs, as well as for the promotion of trade, by the beneficial arrangement of the duties. The increase of the customs is, in other respects, to be attributed to the augmentation of commerce, and to the prevention of smuggling, and also, to additional taxes, during the late war.

ness.

ness, as industry prevailed over idleness, as manufacture found its way into the nation, and as commerce extended its operations and its influence, coins must have become more numerous, in the subsequent ages; because they were more necessary. From the happy accession of Elizabeth, we may trace with sufficient certainty the progress and extent of our public coinage.

<sup>&</sup>lt;sup>a</sup> And. Com. vol. ii. p. 105. <sup>b</sup> Ralph Hift, vol. i. p. 1078. <sup>c</sup> Campbell's Survey. <sup>d</sup> Ibid. <sup>e</sup> Ibid. <sup>f</sup> Tower Records. <sup>g</sup> Mint account.

It did not, however, escape the penetration of Davenant, or perhaps the sagacity of preceding writers,—" that all this money was not co-existing at any one time:" and he, therefore, endeavoured, with his usual industry, to ascertain the probable amount of our circulation, or the number of our coins, during every period, to which either his conjecture, or his calculation, could reach.

In 1600, as he states\*, there probably existed,
in gold £.1,500,000
in filver 2,500,000

---- £. 4,000,000;

which were the tools, faid he, we had to work with, when we first began to make a figure in the commercial world.

In 1660, there were only, in all likelihood, co-existing, of every preceding coinage, — £.14,000,000. Sir William Petry †, who lived nearer the time, and had better information, afferts, "that the re-coinage at the happy Reftoration amounted to £.5,600,600; whereby it is probable (fome allowance being given for hoarded money) that the whole cash of England was then about — £. 6,000,000; which, he conceived, was sufficient to drive the trade of England."

And, a consideration of the progress of our commerce, from 1600 to 1660, as well as the extent of our mercantile transactions, will enable us to decide, which of the calculators was most accurate in his statement, and most satisfactory in his inference. Sir Josiah Child indeed remarked, in 665‡, "that all forts of men complain much of the scarcity of money;

<sup>\*</sup> Whit, edit. vol. i. p. 364.

<sup>+</sup> Pol. Arith. p. 278.

<sup>1</sup> And. Com. vol. ii. p. 142.

yet, that men did complain as much of a scarcity of money, ever since I knew the world; for, that this bumour of complaining proceeds from the frailty of our natures, it being natural for mankind to complain of the present, and to commend the times past." That experienced merchant attributed "the pressing necessity for money, so visible throughout the kingdom, to the trade of bankering, which obstructs circulation, and advances usury." And, from Child's State of the Nation, during several years, subsequent to the Restoration, we may infer, that Petty was nearer the truth, in his representation, than Davenant.

If the amount of our traffic, foreign and domeftic, doubled in the active period, between the Reftoration and the Revolution, we ought from that circumstance to conclude, that the quantity of circulating coin ought to have been in the proportion of fix to twelve; consequently,

If there had been, in 1660 — f. 6,000,000,

There ought to have been in 1688 12,000,000:

Yet, after a variety of conjectures
and calculations, Davenant states\*
it at — 18,500,000;

which, he infifted, was altogether necessary for carrying on our foreign, and domestic, traffic. But, the result of those conjectures, and of those calculations, derives little support, and less authenticity, from the sacts before-mentioned; which shewed,

<sup>\*</sup> Whir, edit. vol. i. p. 367.

that a country, which, for fo many years paid confiderable balances to the world, could not abound in coins. And there was a circumstance of still greater weight, that feems to have been little attended to by historians, or by theorists: a rise in the interest of money evinces a scarcity of specie; at least it demonstrates, that the supply is not sufficient for every demand. The natural interest of money was eight per cent. from 1624 to 1645; and it from this year gradually fell to fix per cent. before the Restoration; so that the Parliament were enabled, in 1650, to fix by ordinance the legal intereft at fix per cent. \*; which was confirmed by ftatute at the Restoration †. But, the natural interest of money gradually rose again, from fix per cent. in 1660, to feven pounds fix shillings and fix-pence in 1690; and from this year to feven pounds ten shillings per cent. before the peace of Ryswick. From 1697, the natural interest of money gradually sunk, before the year 1706, to fix per cent.; and continuing to fall, the Parliament were, thereby, induced [1713] to fix, by statute, the legal interest at five per cent. Yet,

In 1711, Davenant states, "that there might be of gold and filver coin in being," to the amount of - f.12,000,000

In 1688, he had already found - 18,500,000

Decrease in three-and-twenty years f. 6,500,000

<sup>\*</sup> And. Com. vol. ii. p. 85. † 12 Ch. II. c. 13.

It is highly probable, however, that the value of the circulating coins might amount to f. 12,000,000 in 1711. The gradual advance of our domestic industry, and foreign traffic, the reform of the filver coin, the confequent augmentation of taxes, and circulation, the greater credit, both public and private, the finking of the natural interest of money; all demonstrate the impossibility of any diminution of our coins, during the period, from the Revolution to the year 1711. Anderson\*, having given his suffrage to Davenant's statement of 1711, says, " that we may reasonably conclude, as our trade is confiderably increased in fifty-one years, the gold and filver actually existing in Britain [1762] cannot be less than f.16,000,000:"

And we may fairly infer, from the reasonings of Anderson, that the gold and silver coins actually existing now [1786] amount to upwards of - £.24,000,000.

We have feen, during the prefent reign, an extraordinary augmentation of our manufactures, and our trade, a quicker transfer of property, a vast credit, a productive revenue, an unexampled demand at the mint for its coins; which all evince a greater use for money; and, consequently, a proportional supply. Speculation has been actually confirmed by facts, and experience. When, by an admirable

<sup>\*</sup> Commerce, vol. ii. p. 105.

operation, a falutary reform was made of the gold coin, there appeared, in confequence of that meafure, a much greater quantity of circulating specie, than speculists had supposed, in opposition to experience.

The three proclamations—of 1773—of 1774—and 1776, brought in, of defective gold coin, the value, in tale, of - £.15,563,593.

There, moreover, were three feveral fums of foreign gold, and light guineas, fent to the mint, by the Bank of England, from the end of 1771, to the end of 1777

5,200,723.

The total re-coined

£.20,764,316.

There remained, in the circle, heavy guineas of the former, and prefent, reign, light guineas, which were not brought in, and filver

£. 2,055,763.

There also were about two millions of light guineas sent to America during the war, valued at

2,000,000

£.24,820,079.\*

<sup>\*</sup> Lord Auckland's Letters, p. 215; Mr. Rose's Brief Examination, fixth edition, App. No. 4.

If, from the amount of the coinage of the present reign — f.62,945,866, the sum of the re-coinage, at the end of 1777, be deducted - 20,764,316;

we shall see, in the result, the sum, which the increasing demand of the present reign required, at the mint, exclusive of the re-coinage £.42,181,550.

It is not easy to discover, because proper data cannot be readily found, what proportion of the coins, which constituted, in tale, this vast balance, was afterwards melted, or exported. If one-fourth only was withdrawn from the circle of commerce, this circumstance alone, when compared with the quantity of money which, in 1777, was actually found in circulation, would demonstrate the existence of a greater number of coins; and, confequently, the amount, in tale, of f. 31,636,152, in gold, and in filver, about £.2,250,000, to animate our traffic, in daily use\*. One truth is, however, clear, "that every community, which has an equivalent to give, may always procure as many of the precious metals, wherever they may exist, as it wants"; in the fame manner as the individual, who has labour, or any other property, to offer in exchange, may at all times fill his coffers with medals, or with coins.

Hence,

<sup>\*</sup> Such was the opinion of the Lords of the Committee of the most honourable Privy Council, appointed for considering the Late of the coin. Report, p. 2-5.

Hence, we may conclude with Mr. Hume, and with subsequent writers, on political economy, who were equal in judgment to him, that while we preferve our people, our skill, and our industry, we may allow the specie to find its own way in the world, without any other protection, than what is due to the justness of our standard, in sineness and weight, or any other care, than to give continual notice to the credulous, to beware of the tricks of the clipper, the sweater, and the coiner.

In this manner have I reviewed the Chronological Table, with regard to our Shipping, our Exports, the Balance of our Trade, the Revenue of Customs, and the successive operations of the Mint. The Chronological Table gives, as it were, a bird's-eye view of our whole commercial concerns, from the Restoration to the present time, a long and busy period, of domestic dispute, and foreign war. And, the Chronological Table exhibits a retrospective mirror of our traffic, and revenue, which resects a very slattering prospect of our suture prosperity, with regard to both. We may now address the despondent with the gaiety of Swift:

"Canst thou take delight in viewing This poor isle's approaching ruin, When thy retrospection vast Sees the glorious ages past? Happy nation, were we blind, Or had only eyes behind!

## CHAP. XIII.

The Prosperity of Great Britain from 1783 to 1793.

—The Causes assigned.—The East India Trade.—
The Fisheries encouraged.—The New Navigation Act.—Foreign Treaties.—Manufactories promoted.

—Agriculture encouraged.—A thousand Laws for local Improvements.—Revenue Acts.—Financial Operations.—Their salutary Consequences.

So prosperous have our affairs been, from the conclusion of the peace of 1783, to the commencement of the late war, that curiosity naturally desires to trace up the causes to their true sources. In order to gratify this desire, I propose to run over, rather than develope, the principal measures, which have chiefly contributed to raise this nation, from a condition of great despondency, at the first epoch, to a state of unrivalled prosperousness, at the last. And, I shall arrange those measures, 1st, as they tended to promote the private revenue of the people; and, 2dly, as they were proposed to enlarge the public revenue of the nation.

The affairs of the East India company, which, like the affairs of the state, were no doubt greatly deranged, at the re-establishment of peace, in 1784, divided our parties, in respect to the mode of re-

storing them.

Our divisions on this head, were soon settled by feveral acts of parliament\*, for regulating, rather than suppressing, the company, for controlling its government, rather than destroying its powers. If to these laws, we add the Commutation Act +, which gave the company great facility in the fale of its tea, and the fair trader still greater advantages over the fmuggler, we shall have a view sufficiently distinct of those measures, which, we shall immediately find, produced the happiest effects. credit of the company rofe, in proportion as the directors were enabled to fulfil their engagements. They divided 8 per cent. to their proprietors; they paid their debts to the public, even fooner, than the most sanguine had expected: and, before September 1786, they were able to reduce the interest on their bond-debts, at home, from 5 per cent. to 4, with an avowal, that the creditors, who did not choose to accept of the reduced interest, should be paid the principal of their debts t. The value of British goods, which were yearly fent to China was, in the year 1792, £.626,000, though in 1783, and 84, the amount had only been

\* 24 G. III. ch. 34.—26 G. III. ch. 62.

† 24 G. III. ch. 38.

1 The India Stock was, in December 1783, at 120.

in December 1784, at 127.

in December 1785, at 155.

in December 1786, at 166.

in December 1792, at 191.

£.120,000. The shipping, which yearly sailed to China, according to a fix years average, ending with 1792, carried 17,981 tons, though in the fix years ending with 1783, the annual tonnage of the China ships was only 6,059. And there was an yearly increase, upon the fair importation of teas, of 12,503,459 pounds \*.—The whole quantity of shipping employed annually in the India trade, according to a fix years average, ending with 1776,

was, - - - 12,071 tons. D°, ending with 1792 - 26,033

The whole value of British manufactures exported annually to India, according to a fix years average, ending with 1774,

was, - - - £. 907,240 D°, ending with 1792, - 1,921,955

Such was the beneficial refult of the feveral meafures, for regulating the India Company, with regard to our shipping, and manufactures, to the gains of individuals, and to the revenue of the nation!

All these were equally promoted by the various

with 1792 - - - 18,108,533

The annual augmentation - lib. 12,503.459

laws, which were passed, for encouraging our nautical interests. The home fisheries were promoted. The Greenland fishery was encouraged. Newfoundland fishery was regulated. The Southwhale fishery was, in a great measure, created. And, all these, owing to the enterprize of our traders, and the encouragement of the legislature \*, were carried to fuch an extent, that they may be faid to have fomewhat funk under their own greatness, as must ever happen, when the ultimate demand for the products is not equal to the immediate fupply. The nautical interests of the country were fo much confidered, and fo effectually protected, by the act for the increase of shipping, that this statute will be for ever regarded, with thankful recollection, as the great charter of our navigation, which created the authentic register of our naval prosperity †.

Additional employment was given to our ships, and our seamen, by means of our treaties with sorteign nations. The commercial agreement with France, in 1786, opened a wide sield for the adventures of our traders. Our conventions with Spain, by adding more certainty to our commercial enterprizes, in the other hemisphere, gave new occupations to our industrious classes at home. Our treaties with Prussia, and with Holland, had their

<sup>\*</sup> By 26 Geo. III. ch. 41, 45, 50, 81; 27 Geo. III. ch. 10; 28 Geo. III. ch. 20.

<sup>† 26</sup> Geo. III. ch. 60; and 26 Geo. III. ch. 86; and 27 Geo. III. ch. 19, facilities.

facilities, which communicated energy to our traffic\*. And, the renewment of our commercial treaty with Russia has added stability to our commerce, in that country, which before was rather uncertain.

Mean time our feveral manufactories were greatly promoted by the feveral laws, which were made, year after year, for their encouragement †.

Agriculture was, at the same time, incited by the various measures, which were adopted, for giving energy, and effect, to her operations. The forfeited estates in Scotland were restored ‡. The crown lands were made more useful to the individual, and the public. The growth of hemp and slax was surther encouraged §. And, the corn laws, that lay in a state of consusion through many statutes, were reduced into a system, which had for its end, the interests, properly understood, both of the grower, and consumer ¶. Had these laws produced no other benefit to the country, than establishing an effectual mode, for ascertaining the average price of

<sup>\*</sup> See the treaties, which are mentioned above, in the Collection of Treaties, that was published by Stockdale, in 1790.

<sup>†</sup> In the ten years, ending with 1793, there were twentynine statutes passed, for the encouragement of several manufactures, exclusive of one hundred and sourteen acts, for the encouragement of commerce. See the Statute-book.

<sup>‡ 24</sup> Geo. III. ch. 57.

<sup>§</sup> By 26 Geo. III. ch. 43.

<sup>¶ 31</sup> Geo. III. ch. 30.-23 Geo. III. ch. 55.

corn, and thereby preventing causeless alarm, they had merited the praise of most useful regulations.

During the ten fessions, which ended with that of 1793, the Parliament, with unexampled diligerve, enacted no fewer than one thousand, nine bundred, and thirty-four distinct statutes, for promoting, in various ways, the true interest of the people. Of these, there were 625 private and 1309 public acts; there were twenty-nine for improving manufactures; one hundred and fourteen for commercial purposes: and, above all, there were fixty-six for improving, and strengthening, our constitutional system, during a period, when it was supposed, that the constitution, like our neglected mansions, was falling saft into ruins, without the slightest repairs.

In addition to all those laws, for promoting the private revenue of the people, there passed in the eight years, ending with 1792, seven bundred and sifty Acts of Parliament, for making local improvements, and domestic meliorations. Of this remarkable sact, here is a curious proof, from the Statute-book, in the following

TABLE; shewing the Number of Acts of Parliament, which passed, in each of the following Years, for making Roads and Bridges, &c.; Canals and Harbours, &c.; for Inclosures and Draining,&c.; for Paving and other Parochial Improvements.

The Total -	80	83	66	92	96	86	116	131	750

There is, moreover, a class of statutes, which, as they at once promote the private revenue of the people, and the public revenue of the nation, are of an amphibious nature. Of this kind were the acts, for regulating, and controuling, the India Company. We have seen what an augmentation of shipping they created; what an increase of British manufactures they sent out; and, in addition to these commercial benefits, how much they enabled the Company to satisfy their debts to the public. Of this mixed kind also was the commutation-act, which, by destroying smuggling, and facilitating fair

<sup>\*</sup> Of those debts, there were paid in 1785, £.401,118. 17. 1.; and in 1786 £.522.700, 7. 6.; amounting to £923,519. 4. 7.

trade, gave rife to a great private commerce, while it brought a large contribution to the public revenue \*.

Much of this merit has the confolidation act, which facilitates commerce, by its simplifications, and enriches the public income, by its contributions †. The various acts against smuggling, as far as they enlarge fair trade, and make the established taxes more productive, are entitled to equal praise. The wine act ‡, and the tobacco act §, are both entitled to this commendation. The various improvements in the post-office, fairly merit, yet greater laud. We could have little trade, without the post-office, which, by means of trade, yields a vast revenue to the nation. As a proof of this, and of the great augmentation of our commercial cor-

<sup>\*</sup> The immediate effect of this efficient measure, was the legal importation of an additional quantity of tea, amounting to 12,503,459 lb. a year. The collateral consequences were, as we have seen, a vast export of British manufactures, and a great employment of British shipping.

<sup>†</sup> Those contributions amounted, in 1792, to £.75,434; exclusive of the benefits, which that act did to trade, which are to be inferred from the vast increase of the imports and exports.

<sup>†</sup> The increased quantity of wine imported, in consequence of that act, was 16,694 tons a year, which yielded an increased and nett revenue of £.290,143.

<sup>§</sup> While this aft promoted the real interest of the fair trader, it augmented the public revenue at least £.154,000 a year.

respondence, see the subjoined statement of the gross revenue of the post-office, in the following years, ending on the

5 April 1786 - £.471,176 — 5 April 1787 - £.474,347 D° - 1788 - 509,131 — D° - 1789 - 514,538 D° - 1790 - 533,198 — D° - 1791 - 575,079 D° - 1792 - 585,432 — D° - 1793 - 607,268

But, of all the measures, which have been just described, as of an amphibious nature, the sinking-fund, which began to work, in the three months, that ended on the 31st October 1786, has produced the greatest facility to individuals, and benefit to the public:—To individuals, by creating a rapid circulation, and plenty of money, for the uses of business, by raising at once the value of the produce of our land, and labour, and the price of the funds: To the public, by disnoumbering the nation, before the 1st of February 1793, of £. 10,109,400; when the sinking-fund itself had increased to £.1,669,582. a year.

Such were the various means, which were wifely adopted for promoting the revenue of the people, fince 1783, either by direct encouragement, or by incidental help. Let us now take a flight view of the revenue of the nation, during its depression, in 1784; of the measures, which were adopted for raising it; and of the result, during its exaltation,

T 3

though the retrospect seldom affords the pleasures of the prospect.

There was, at that epoch, a vast unfunded debt of nine-and-twenty millions, which pressed down the value of the public funds, and even prevented the productiveness of the national income.

The yearly interest of the funded debt, on the 5th Jan. 1784, was — — — £. 8,000,284

The yearly interest of exchequer bills was — 260,000

The annual charges on the aggregate fund, and the appropriated duties, were — — 1,040,000

The usual establishments were about — 4,000,000

The total to be provided for — £.13,300,284

For the discharge of this great sum, there was only the permanent income, on the

5th of Jan. 1784, amounting to — £.9,671,206

The annual land and malt taxes about 2,560,000

12,231,206

. \_\_\_\_\_

The total of the annual deficiency in 1784—£.1,069,078

Such was nearly the state of the national account of expenditure, and income, during the unpropitious period of 1784, while the unfunded debt depressed the whole system of our funds, and credit \*!

The fame means, which were, at that epoch, employed to deprefs the nation, eventually promot-

<sup>\*</sup> The three per cent. confols, which had rifen to 69, in March, 1783, fell to 54%, but rose to 58, in 1784, and sluctuated nearly at that rate till July 1785.

ed its falvation. So much was faid of the ruin of the country, that the country was almost persuaded, that it was indeed on the verge of ruin. Yet, when the nation was, by those means, convinced, that effectual measures were necessary, the business of faving it, was more than half atchieved.

The most efficient measure, for obtaining this great end, was to fund, in the years 1784, and 1785, the floating debts of the navy, of the victualling, and of the ordnance, departments, to fo great an amount, as to require taxes, which produced f. 938,000, for paying the interest. At the same time, that new taxes were imposed, systematic meafures were effectually purfued, for improving the collection of the old, which is ever the best occonomy. Some of the laws, for that falutary purpose, have been already noticed. The smugglingact, the commutation act, and other fimilar laws, have been also mentioned, as wife measures, which at once promoted the private income of individuals, and the public revenue of the nation. And, the beneficial effects evince, that they were attended with the most falutary confequences.

The best proof of this may be found in the public accounts of the national income, and expenditure, during the year 1786:

The nett payments into the exchequer, in the twelvemonth, which ended on the 5th Jan. 1786, £.15,397,471. The expenditure, in this period, was 14:478,181.

The annual furplus of the income\* £. 919,290

By those measures, the nation was now saved. This also, was the epoch of the finking-fund, which carried falvation up to prosperity. There were other duties added to that furplus of income; fo as to make that fund an efficient million a year. To this large fum were added fuch annuities for years, and lives, as might expire, in the effluxion of time. And, to the whole was thrown in some casual sums, for giving greater effect to its progreffive operations. Such was the finking fund, which was, at that epoch, invariably appropriated, for buying quarterly fuch of the public fecurities, as should appear to be most depreciated, and thereby to offer the best bargain to the commisfioners, who were appointed to buy them, on behalf of the public. Before the first of August 1794, there had been received into this fund, fince its

<sup>\*</sup> See the report of the felect committee for examining the accounts of the public income and expenditure, 21st March 1796.

establishment, £.10,599,265, which were laid outby the commissioners, in purchasing various public securities, amounting to £.13,617,895\*. This, then, was the amount of the national debt, which had been by those means, paid off, before the first of August 1794. The sum, which was laid out for that purpose, during the preceding quarter, amounted to £.408,363. And, if we were to form a judgment, from this great sum, which was thus applied, we might infer, that the sinking-sund had, in no long period, nearly doubled itself, by the productive operations of compound interest, with some additional aids.

This finking-fund not only raifed the price of the public fecurities, by creating a conftant demand for them, but it promoted the industrious pursuits of the people, by keeping circulation full, and it thereby made the permanent income more

\* The general average, at which that great capital was purchased, was  $77\frac{1}{8}$  per cent. It is curious to observe the operations of the sinking-sund, during those times, when we enjoyed peace, and were threatened with hostilities, from the prices, which were paid by the commissioners for the 3 per cent. consols, in every quarter.—The first quarter, ended on the 31st of October 1786, during which the consols were purchased at  $77\frac{1}{4}$ : The prices sluctuated, in the following quarters, as under:—

productive, during every fuccessive year. Thus, the permanent taxes, produced, in the twelvemonth, ending on the 5th of Jan. 1787 - £.11,867,055

5th of Jan. 1788 - 12,923,134

5th of Jan. 1792 - 14,132,000 5th of Jan. 1793 - 14,284,295

The whole revenue, in 1783, was below the establishment £.2,000,000.

The whole revenue, in 1792, was above the establishment £.2,031,000.\*

Such, then, was the revenue of the nation, during the depression, in 1783; the principal measures, which were adopted for raising it; and such was the amount of its exaltation; when Great Britain was forced into another war, by the dire necessity of unprovoked hostilities.

<sup>\*</sup> The Brief Examination, p. 58.

## CHAP. XIV.

The Strength of Britain in 1793.—From her Populousness.—From ber Trade.—From the Numbers of her Shipping and Sailors.—From the Magnitude of the Royal Navy.—From her Revenue.—The Losses of her Trade.—The Bankruptcies of 1793.—The Lapse of the Bank of England.—Our vast Commerce.—The Improvement of the Country.—The Corn Trade.—Finance Operations.—The Peace.—The Conclusion.

THE judicious reader has already determined, from the experience of the past, that the nation was never more able to engage in vigorous war, than at the great epoch of her prosperity, in 1792. We never had so many people, nor so many enlightened, and industrious, people, who were usefully employed; and who, with augmented capitals, obtained greater gains. We never exported so great an amount of the products of our land and labour; as the foregoing facts have shown, and the following details will demonstrate:

The

The value of British manufactures, which were annually exported to the feveral countries, in Europe, except to the British dominions:-

The

The value of British manufactures, which were annually exported to all other countries, without Europe:—

Six years average, Six years average, ending with 1774. ending with 1792. To the British Colonies in America -f. 310,946 - f. 697,205 To the States of America -2,216,824 2,807,306 To the West Indies 1,209,265 1,845,962 To the East Indies 907,240 1,921,955 To New Holland 3,179 To Africa 568,663 149,364 To the South Whale Fishery 75 £.5,093,639 £. 7,844,345

We never had, at any former period, fo many shipping, either for the uses of traffic, or war, as at the beginning of the late hostilities; as the subjoined details will clearly evince:—

```
Av. of years. Ships cleared outwards. Val. of Cargoes.

In 1772 Tons Eng. Tons foreign. Total.

73 74 680,175 -£.15,613,003

74 1785 86 1,012,899 - 117,471 - 1,130,370 - 17,123,373

87 1790 91 1,329,979 - 163,778 - 1,493,757 - 22,585,771
```

From these details, it is sufficiently apparent, that we employ upwards of five hundred and thirty-four thousand tons of shipping, more than at the commencement of the American war; and export a greater

greater value of cargoes, to the vast amount of £.6,972,768. Of our commercial prosperity, we shall find supplemental proofs, if we examine the gross income of the post-office, which has been already stated \*; and which shows clearly how commerce and revenue may promote each other. It is equally true, that the navigation, and nautical strength, of the country go hand in hand together: the mercantile shipping maintain our naval militia, during peace, and our naval militia protect the mercantile shipping, in war. The amount of both will appear in the subjoined Table; comprehending the number of ships, with their tonnage, and men, within every part of the British dominions, in the following years:—

		1791.		1792.			1793. †			
	Ships.	Tons.	Men.	Ships.	Tons.	Min.	Ships.	Tons.	Men.

The Total

\* In page 277.

Such

<sup>†</sup> The year 1793 contains the shipping, which were registered between the 30th of September 1792, and the 30th of September 1793; the accounts being made up yearly to those dates. The numbers, which appear in the account of 1793, as prize ships, made free as British, were 661 vessels, containing 97,969 tons.

Such were the number of ships, and sailors, which, in those years, belonged to the merchants, within the British dominions; and which, by proper management, may be all converted to the uses of war, if the royal navy were less equal to its various objects.

By examining the following details, we shall acquire sufficient information, with regard to the comparative state of the Royal Navy, in the following years:—It consisted,

		Tons.
In 1760, of		300,416
In 1774, of	G-committee	276,046
In 1792, of	(married)	433,239*
In 1800, of	-	790,950.

But, the greatest fleet is of little avail, if we had not money to put it in motion. We never had so great a permanent revenue as in 1792. We never had so efficient a finking fund, to give energy to private gains, and to augment the public income, as

when

when hostilities began. By the simplification, which has been lately introduced into the mode of stating the accounts, the amount of the national income and expenditure, in every year, becomes apparent to every eye, the moment the statement is presented to parliament. It equally contributes towards our national strength, that an account of the produce, which each particular tax yields, is now laid before the parliament, in order to show, which of them are productive, and which of them are deficient. The appointment of commissioners, for controuling the army accounts, have made all officers more careful both of their receipts, and disbursements. The establishing of a new board, for examining the public accounts, has induced all perfons, who receive public money, to be more attentive, in the expenditure, and more punctual, in their fettlements. And, the great example, which has been lately made, of a strict enquiry, with regard to " unaccounted millions," and the subsequent repayment of many thousands, has operated as one of the resources of the state, during the late hostilities; as rigid œconomy, in private life, is the most productive income. The facility, with which supplies were found for the late campaigns, is the best evidence of the truth of the foregoing politions.

In the midst of the greatest prosperity, which this slourishing nation ever experienced, whether we regard the income of individuals, or the revenue of the State, ensued, at the end of 1792, what was denominated, at the time, the "universal wreck of

credit,"

that grievous epoch. I thought then, as I now think, that those bankruptcies had no connection with the beginning of war: and, I still think, as I then declared, that the derangement of our private credit was altogether owing to an impeded circulation, which is, doubtless, a commercial misfortune of great magnitude. An inquiry into the cause of those bankruptcies will develope some curious circumstances, will ascertain some important sacts, and will inculcate some useful instruction.

At the portal of this inquiry, we shall find a remark of Lord Kaims, which is the key to this subject. He states it, as a fact, that from 1694, to 1744, there were, in Scotland, only thirty-four cession bonorums [bankruptcies;] and, he infers, from the fact, as a consequence, how languidly trade was then carried on. From 1774 to 1771 there have been yearly, thrice thirty-four [bankruptcies]; which is a proof, he adds, of the rapid progress of trade. Every one, he concludes, is roused to adventure, though every one cannot gain\*. Had all been like this! but, alas! seldom is it, that Lord Kaims, with all his celebrity for labour, states his facts, with so much accuracy, or draws his inferences, with so much precision.

We may fee a fimilar progress in the annals of our commerce, in England. In the infancy of our

<sup>\*</sup> Sketch of the History of Man, 12mo. vol. I. p. 92.

traffic, the bankrupt was regarded by the law, as a criminal, who had defrauded his creditors. When commerce began to be more practifed, and better understood, the bankrupt was at length considered by our legislature, and lawyers, as unfortunate, rather than fraudulent. The trade of England, after languishing, in its childhood, for ages, was, even at the commencement of this century, only in its infancy. And, at that epoch, we had fcarcely, in England, forty bankruptcies, in a twelvemonth. I have, in quest of facts, inspected the London Gazette, that melancholy chronicle of our commercial failures; and from it have compiled fuch a chronological statement of annual bankruptcies, as hath all the accuracy, that fuch an enquiry eafily admits, or truth absolutely requires. I have thrown it into the comprehensive form of a Table, which is here fubioined:

A 'I' A B L E; shewing the Number of BANKRUPTCIES, in every Month, during the following Years, from 1700 to 1793:

	fanuary March - March - April - May - June - Juny - Juny - Josephaner October November	

Here, let us pause awhile.—This curious, and instructive, Table, surnishes important sacts, which inculcate useful instruction. It is apparent, from those sacts, that in the exact proportion, as our traffic increased, from its infancy to manhood, the number of bankruptcies, at every period, bore a just proportion to the amount of our trade, and the frequency of our commercial dealings. The traders continually adventured out upon the uncertain ocean of commerce, though they did not all return, with happy gales, and equal success, into port. And, the nation, which beheld the shipwreck of their fortunes, grew rich from their enterprizes, while she pitied the unhappiness of their fate.

If this Table be a faithful mirror of our commercial misfortunes, we may fee, that the commencement of Queen Anne's war did not greatly incommode our traders. The buftle, and bufiness, of her hostilities appear to have increased the number of bankrupts. The rebellion of 1715 feems to have made none. The South-fea year, 1720, appears to have involved our merchants in the burft of bubbles, though it was public, rather than private, credit, which was chiefly affected, during this unhappy year of projects. Our bankruptcies now regularly increased with the augmentation of our trade. The rebellion of 1745 overturned none of our commercial houses. The war of 1756 feems to have done a little more mischief, though that mischief feems to have decreased, as hostilities went on. The peace of 1763 augmented the number of bankruptcies,

bankruptcies, though the commercial distresses of that period feem to have been more in found, than in reality. With our traffic, and business, our bankruptcies continued to increase in number, and magnitude. We perceive how many they were augmented, during 1772, and 1773, when our circulation was impeded, at a moment of uncommon prosperity. We see a smaller number of bankruptcies, in 1781, when our trade was the most depressed, during the American war, than in 1772, and 1773. The two most prosperous years, which this nation ever knew, were 1791, and 1792; yet, strange to tell, the number of our bankruptcies was larger than the amount of them in 1781; the most disastrous year of the American war; so different are the informations of fast from the deductions of theory.

We might learn from experience, that prosperity generally leads on to adversity, as the highest health is often the forerunner of the worst diseases; the chills of ague, or the slames of calenture. We perceive, through the several months of 1791, and still more, in 1792, that there lurked, in our commercial habit, the predisposing causes of our commercial maladies, which broke out into such a paroxysim, during 1793. History will record the month of November 1792, as a memorable epoch, in our annals. It was peculiarly unfortunate to our traders. Yet, was it a month propitious to our constitution. Whether the apprehensions of that epoch produced any of the numerous bankruptcies of No-

vember 1792, I pretend not to know. I believe, that all terrors disappeared, when the parliament was called, the militia were embodied, and, above all, when the nation, with an overpowering voice, avowed her attachment to the constitution, and promised her support of the laws.

Our domestic quiet was, by these means, scarcely fecured, when the French, after various threats, declared war against Great Britain, and Holland, on the first of February 1793. The unusual bankruptcies, in the month of January preceding, can hardly be attributed to this subsequent measure. The first bankruptcy, which created suspicion, from its amount, was the failure of Donald and Burton, on the 15th of February 1793. They were engaged in the most uncertain of all traffics; in the trade of corn; in speculations on American corn: but, they had fustained no loss from the war. On Tuesday evening, the 19th of February, the Bank of England threw out the paper of Lane, Son, and Fraser, who had never recovered the shocks of the American war. And, next morning, they stopt payment, to the amount of almost a million of money. This great failure involved the fate of feveral very fubstantial traders. But, none of those houses had fustained any damage from the war. Suspicion was now carried up to alarm, and, every merchant, and every banker, who was concerned, in the circulation of negotiable paper, met with unufual ob-Aructions, in their daily business. Yet, it was not till the 16th of March, that the long established house

house of Burton, Forbes, and Gregory, stopt, which was followed, on the 18th, by the failure of their correspondents, Caldwell and Company, of Liverpool, to the amount of nearly a million. Still, neither of these great circulators of paper had sustained any loss from the war. And, as suspicion had been carried up to alarm, alarm was now magnified into panic.

In the midst of this terror, the whole city of London was frightened at the rule of three. It was an eafy calculation, by which it was demonstrated, that, if one house failed for a million, ten houses might fail for ten millions. Neither these calculators, in their closets, nor those traders, in their counting-houses, ever reflected, that one bankrupt might pay five shillings in the pound, a second ten shillings, a third fifteen shillings, a fourth twenty shillings, and a fifth five-and-twenty shillings, in the pound. In fact, several bankers, during that panic terror, paufed in their payments, who immediately went on as usual with their business, and some great traders, who were obliged to stop, soon paid twenty shillings in the pound. Yet, all this while, we had not felt the stroke of an enemy. In this manner, terror created distrust, distrust impeded circulation, and an impeded circulation is the greatest misfortune, that can afflict a commercial nation.

Such, then, were the real causes of our commercial distresses! And, such was the sad termination of seven years of the greatest prosperity, both public, and private, which this nation had ever enjoyed!

In the midst of this prosperity, a bank was erected, in every market-town, I was going to fay, in every village. The vast business, in the country, created these banks; and these banks created, by their facilities, vait business. The rife in the price of the public stocks drew immense sums of money from the country to London; and the still greater rise of the public stocks drove vast sums of money from London to the country. Much of this money was placed in the country banks, which employed it, in speculations, to relieve themselves from this fullness. But, of speculations, there is no end. The country bankers tried various projects to force a greater number of their notes into circulation, than the business of the nation demanded. They destroyed, by their own imprudence, the credit of their own notes, which must ever depend on the near proportion of the demand to the supply. The country bankers became ambitious of furnishing not only the country, but London, with notes. For this purpose, many of them issued notes, optional, to be paid, in the country, or in London\*. By these means, their notes came oftener, and in greater numbers, to London, than were welcome, in the shops of London. These notes became discredited, not only in proportion, as the fupply was greater than the demand for them, but as the banks

<sup>\*</sup> By a list of English country banks, which I have now before me, containing 279, though not the whole number, it appears, that of the 279, no sewer than 204 issued optional notes, and of these last 71 stopt payment.

were distant, and unknown. The projects, and arts, by which these notes were pushed into the circle of trade, were regarded with a very evil eye by those, who, in this management, saw great imprudence, in many, and a little fraudulence, in some. When suspicion stalked out to create alarm, and alarm ran about to excite panic, more than sour hundred country banks in England sustained a shock; all were shaken; upwards of a bundred stopt; some of which, however, afterwards went on, in their usual course of punctual payments.

The many which stopt, the many that paused, all demonstrate how greatly they contributed to our commercial mifery. The whole number of country banks in England was unknown; their capitals, and characters, were unknown. Their imprudence only was known, which had already shaken their own credit. And, suspicion fastened upon all, though the event has proved, that they were generally more stable, than had been at first supposed. Yet, few foreign merchants failed. The country banks, and country traders, were those, who chiefly fwelled the unfortunate number of our monthly bankruptcies. And, this comparison is alone sufficient to show, that the cause of our commercial maladies arose at home, without insection from abroad; that it arose from the fullness of peace, without the misfortunes of war.

Happy is it for mankind, that they fee little into futurity. Had it been foreseen that, in a few months, at the commencement of hostilities, a hundred banks would stop, and in the same twelvemonths.

months, thirteen hundred bankruptcies would happen; the whole nation had trembled to its center. Posterity will scarcely credit the record of the facts, that after such a storm, in three short months, our confidence, and credit, were restored. Unusual measures were resorted to, in parliament, to prevent the universal wreck of credit. Perhaps the parliament thought, with Lord Hardwicke, that, if there be no precedent, we will make one. The very first emission of exchequer-bills, however, in 1696, for supporting credit, and helping commerce, during the recoinage, was a precedent in point \*. The issuing of exchequer-bills, in 1793, was, an uncommon, but a very falutary, measure. The whole nation was supported, and foothed, by the appointment of commissioners, for granting aid to private credit, by exchequer-bills. There never was a measure, so little alarming, and so completely effectual, as this immediately proved. Of the 1.5,000,000 of exchequer-bills, that were allowed, the whole number of applications for loans was 332, amounting, in all, to the fum of f, 3,855,624. Of these applications, 238, amounting to the sum of f.2,202,200, were granted. Of the remaining 94 applications, 45 for the fum of £.1,215,000 were withdrawn, or not purfued by the claimants: and 49 applications for the fum of £.438,324, were rejected, either as not coming within the purpose of

<sup>\*</sup> Anderson's Chron. Com. vol. ii. p. 213.—It is worthy of remark, that in 1696, there were exchequer-bills issued for as small sums as £.5. each, which proves, that they were intended for common use.

the act, or on account of the inability of the parties to give fatisfactory fecurity. The whole fum, which was advanced on loan, has been repaid, without difficulty, or diffress. Of the persons, who were thus affifted, only two became bankrupt. These facts prove, that temporary relief was only wanted, and to no great amount. The interest on those loans amounted to f.13,033: 14: 61: the expence of the management to £.8,685: 12: 4: and of consequence, there was a clear profit, from one of the happiest, and best timed, measures, which the wisdom of government ever adopted, of  $f_{\cdot\cdot\cdot}$ 4,348: 2:  $2^{\frac{1}{4}}$ . In fact, the alacrity of parliament to support the credit of the country was relief. May 1793 was the epoch of the greatest number of bankruptcies. They greatly decreafed, in June; they decreased still more, in July; they continued to decrease, in August; and in September, they fell to be nearly on a par with the numbers, in September 1792. The business was now done\*. The expectation of relief actually created it.

\* I happen to have the following note, which, I believe, is fufficiently accurate to shew to what parts of the country the principal relief was granted:

There were granted to

£.404,480 London it. And, the wife determination of parliament to fupport both public, and private, credit, quieted apprehensions; and was extremely instrumental, in restoring mutual confidence; as it gave traders time to recollect themselves, and to look for, and use those resources, which are not often wanting to merchants of character and property, in times of commercial difficulties.

In Scotland, the commercial distress, though great, was much less, than in England. If scarcity of gold and silver would make distress, Scotland ought to have had her full share of distress. Though there be some variety of opinions, as to what really is a banking-bouse, in Scotland, it is certain, that the act of parliament\*, for suppressing optional paper and small notes, has introduced into her system, since May 1766, a greater circumspection, which has prevented much mischief†. The great principle,

<sup>†</sup> An intelligent friend at Glasgow wrote to me on this subject, as follows:—" The distress began to be felt here, in a few days after it began in London, in the month of February Iast: but we had no failures till the 28th of March, when the banking-house of Murdoch, Robertson, and Company, were made

principle, and various provisions, of this falutary law, by converting all paper bills into cash notes, which are payable on demand, has been attended with the most falutary consequences.

Scotland was not so much deranged, as England, either in her circulation, her manufactures, her trade, or her shipping, during the year 1793. Owing to a more attentive management, her banks were less embarrassed. Her circulation being less checked, its impediments gave sewer interruptions to her manufactures. And, her trade and shipping, being put in motion by all these, were little driven from their usual course, during the storm, which had almost wrecked the commerce, and navigation, of England. Of these exhilarating truths, the following details surnish ample proofs, what-

made bankrupts, for about f.115,000. This was followed by the banking house of A. G. and A. Thompsons, who owed about f. 47,000. The first will pay every shilling to their creditors; and it is supposed, that the last will do so also. One or two more of the country banks, in the west of Scotland, were under temporary difficulties, but made no pause; and having got affiftance they went on; and, as all the other banks did, drew in their funds, and lessened their engagements. Some of the banks here did certainly continue to discount some bills, but in a less degree than formerly. All of the banks were under the necessity of allowing many of such bills, as they held to be renewed, at two or three months date, either in whole, or in part, according to circumstances, which, in fact, was the same thing as a new discount. In this way all our banks have been going on to this hour, by making renewals, when they could not obtain payment, endeavouring to lessen the amount at every renewal; so as gradually to draw in their funds."

ever may have been the temporary embarrassiments:

Of linen cloth, there were made for fale, in Scotland, during the years

Perhaps a more accurate view of the trade, and shipping, of Scotland may be seen in the subjoined statement, which exhibits the various ships, in their several employments:

Years	~		Coast Trade.		-	Tons.	Ships.   Tons.	
	-							
1789	793	84,206	958	47,901	381	22,798	2,132	154,905
1790	794	86,823	950	47,688	361	19,898	2,105	154,409
1791	776	85,468	1,058	51,998	388	19,632	2,222	157,098
1792	718	84,027	1,022	50,940	376	19,890	2,116	154,857
1793	698	80,024	1,143	57,318	393	17,973	2,234	155,315

From the foregoing documents, I am now induced to infer, that the commercial affairs of Scotland were little embarrassed by the impeded circulation, in 1793, and still less by the commencement of war. And, from this truth, I am inclined to believe that, had not any unusual bankruptcies happened, in England, during 1793, from the imprudent management of country banks, her trade, and shipping, had been little lessened by sudden hostilities.

Happy is it for mankind, that every evil brings its own remedy, unless imprudence step in, to aggravate misfortune, by its reformations. We have already derived commercial benefits from our commercial derangements. Speculators now fee, that there are limits, beyond which, they cannot fafely pass. Bankers at length perceive, what indeed required not the help of experience, that by issuing too much paper, they may lofe all. Merchants of real capital, and true knowledge, will do more bufiness to more profitable purpose, since traders of no capital, and little moderation, have been forced to give way. Manufacturers have learned, from recent mifery, that there are bounds, both to giving and receiving, wages \*. Distrust will be banished from

<sup>\*</sup> My commercial correspondent at Glasgow, whose sound sense and genuine veracity, I will warrant, wrote to me on the 9th of December 1793, as follows:—

<sup>&</sup>quot;The truth is, that most of us are of opinion, that the late stagnation has been exceedingly useful to our trade; and that if it does not proceed too far, it will be attended with the most beneficial

from our island, as those, who stood the test of the late trials, must, like gold in the surnace, be deemed more worthy of considence. The measure of issuing exchequer bills has at once evinced the alacrity of parliament to support credit, and the good effects, which no vast sum, when prudently applied, can produce on the extended surface of general circulation. And, the whole world has seen, with wonder, during the severest trials, that the people of this nation have vast property, exclusive of paper, and unbounded resources, without exhausting their strength.

Never was this exhilarating truth more fully verified than by the events of subsequent times. One of the greatest of these events was the LAPSE of the Bank of England, in February 1797. Panic, and

beneficial confequences to men of real capital: For, previous thereto, the fales were fo rapid, the returns fo quick, and money fo abundant, that much bufiness was established upon little better than mere paper speculation, or circulation alone, which is now at an end. The wages of our labourers, too, had got to fuch a height, that we must, in all probability, have been gradually undermined in foreign markets, by foreign manufactures; and if this had once occurred, it would have been much more difficult to recover from, than any temporary shock, like the present. Besides, these high wages occasioned much idleness and dissipation; and much of the time of our workmen was confequently spent in ale-houses, where they became politicians, and government-mongers, restless and discontented. Upon the whole, therefore, we may fay with truth, that all, which has hitherto happened, has been for the best."-These judicious observations apply equally to the whole nation.

an impeded circulation, had well nigh ruined the whole country-banks of Great Britain, as we have feen, in 1793; and panick, and an impeded circulation, occasioned that laple of the Bank of England, in 1797. An inquiry into the affairs of the Bank now became necessary. That inquiry was minutely made by Committees of the two Houses of Parliament, separately. Every trial of the Bank "only published her better commendation." A thousand facts, and circumstances, were now disclosed to the world, with regard to the wealth, and circulation of the Bank, which were before unknown to the most intelligent persons. It appeared, at length, that the Bank had, undoubtedly, a clear furplus of property, after answering all demands, of f. 15, 137,690. It was now disclosed, that there was then in circulation of Bank notes, the commodious amount of f.11,030,110\*. As it was now apparent, that much of that panick had arifen from the artifice of the enemy, the Parliament prohibited payments, by the Bank, in gold, and filver, for a time. The traders immediately came out with declarations of confidence. Every one now ran to receive Bank notes, as if they had been specie. Credit, both public, and private, was again restored. The specie, which had been carried by fright into the country, from London, was brought back by credit, from the country, to London. During the years 1797, and 1798, there were

<sup>&</sup>quot; Lords' Report, Appendix, No. 10.

imported into this island, as a favourable balance, f.8,000,000 in bullion. After the failure of fo many country banks, and the paufe of the Bank of England, to have furnished such vast supplies for war, and to have engroffed the trade of the world, are proofs of inexhaustible resources.

If we were now to inquire into the losses of our commerce, during the late hostilities, with so many nations, it would perhaps be found, that the interruptions of circulation, and the derangements of credit, inflicted deeper wounds on our traffic, than the redoubled strokes of the enemy, which, as every war brings some discouragement with it, must be allowed to have made fome defalcations from our shipping, and our traffic. And the apparent losses of our trade, both from bankruptcy, and war, may be calculated from the following detail:

	Ships cleared outwards.	Value of Cargoes.
	Tons English. Do Foreign. Total.	£.
In 1785 }	1,012,899 - 117,471 - 1,130,3	70 - 17,123,373
1790 91 92	1,329,979 - 163,778 - 1,493,7	57 - 22,585,771
1793	1,240,262 - 187,032 - 1,427,2	

Yet, our general traffick, owing to the vast force of its energies, foon regained its former prosperity. It preyed upon the trade of the enemy. We may eafily perceive how much of our commerce we owed to prize

prize goods, from the following statement of the value thereof, which was imported, and exported—

Prize Goods imported. Prize Goods exported. In 1793 f. 560,124. f. 1,115,141. 1,319,728. 94 877,633. 896,517. 95 96 286,631. 437,844. 97 484,451. 991,142. 98 582,128. 1,338,344. - 534,874. 1,120,116. 99 1,611,733. - 683,097. 1800

Our enterprize absorbed almost the whole commerce of Europe. And, owing also to those causes, our foreign trade rose, by an energetic increase, from the depression of 1793, amounting to £.20,738,588, to its vast augmentation over the most prosperous years, amounting to £.43,152,019, in 1800\*.

If we add to this vast sum the value of the imports, in the same year, the whole value of our foreign trade will appear to be no less than £.73,722,624. How to calculate the amount of our domestic trade, I know not: it was always deemed by our old writers, on trade, Petty and Child, Davenant and De Foe, who were as wise as we are, though they had not the same details, to be more than our foreign commerce.

Those facts exhibit, then, such an immense trade, as no other country ever enjoyed, in the undisturbed times of prosound peace. If we add to that

<sup>\*</sup> See the Chronological Table.

vast traffic, the various profits, which are connected with it; the gains of freights\*; of the infurances; and of agencies; which were all equally profitable to our traders; we must greatly enlarge our ideas of the vast gains of our commerce, during the late war, which was to exhaust our resources, and to ruin our traffic.

The late war is, gloriously, distinguished by the capture of the enemy's corfairs, and by the ruin of the enemy's sleets. Our shipping were never so protected, or so safe, in any former war; owing to those causes, and to the vastness of the business, the insurances were never made, on such reasonable terms †. When the sleet, which was employed in the

Guineas.

the Russian trade, was recently detained in the ports of Russia, the loss of the whole was fettled, with

Guineas; April to October, £.7 a. 7 Guineas; October, &c. 6 Guineas.

# Jamaica.

- 1779. With convoy 7 to 8 Guineas; without 15 a. 20 Guineas.
- 1782. 8, 10, and 15 Guineas with convoy.—Premiums highest in the beginning of the season.
- 1792. L. 2½ per cent.—1793. January, 3 Guineas; February, 5 Guineas, and 7 Guineas; April, 8 Guineas; June, 4 a. 6 Guineas, with convoy.

## Leeward Islands.

- 1779. With convoy 7 a. 8 Guineas, without convoy 16 Guineas.
- 1782. From 8 to 12 Guineas with convoy.—Premiums higheft in the first part of the season.
- 1793. £.2.—1793. January,  $2\frac{1}{2}$  to 3 Guineas; February, 10 Guineas; March, 5 Guineas, with convoy. 5 Guineas per cent. the general rate throughout the feafon, with convoy.

#### Canada.

- 1779. With convoy, 10 Guineas; without convoy, 15 Guineas per cent.
- 1782. 15 Guineas with convoy.—1792. £.3 to 3 Guineas, throughout the feafon.
- 1793. 5 to 6 Guineas with convoy.

## American States.

- 1782. 15 Guineas with convoy in general throughout the feafon.
- 1792. f. 2 in general. Ditto.

with the facility of the common loss of a fingle ship. This is a transaction of which the Insurers of Britain may boast. The facility, and reasonableness, of the insurances, during the late war, ought to be added to the unusual profits of that gainful period.

Our trade was not only carried on with an extraordinary degree of fuccess, and profit, but, the furface of our island was improved with uncommon skill, and augmented energy. From the restoration of peace, in 1783, till the commencement of the war, in 1793, domestic meliorations had been carried on, with equal vigour, and suc-

1793. January, £. 2; February 4th to 2th, 3 Guineas, 4 Guineas, and 5 Guineas; 23d, 8 Guineas; March, 8 Guineas, and 5 Guineas, American ships only. The general rate throughout the rest of the season, 3 guineas.

## The Baltic.

2779. 2½ Guineas with convoy, 5 Guineas without.—1782. 4 to 5 Guineas with convoy.

1792 I Guinea to St. Petersburg, £.11/4 to 11/2 to Stettin.

1793. March, 3 Guineas with convoy to Stettin; 6 Guineas without.

April,  $z_{\frac{1}{2}}^{\frac{1}{2}}$  Guineas with convoy to St. Petersburg; and 5 Guineas without.

July, to St. Petersburg, 3 Guineas, to return 1 fer cent. if with convoy, which was the general rate throughout the rest of the season. Add to all those details what a very eminent Insurer at Lloyd's Cossee-house has written to me, "that premiums of in-"furance, in the late war, have been much lower, "than they were in the American war."

cels,

cess. But, during the late war, our domestic improvements have been pursued with still greater knowledge, and more useful efficacy. We may see proofs of those facts, in the subjoined

TABLE; shewing the Number of Acts of Parliament, which passed, during the late war, for making Roads and Bridges, &c.; Canals and Harbours, &c.; for Inclosures and Draining, &c.; for Paving and other Parochial Improvements; compared with the eight preceding years.

	1793	1794	1795	1796	1797	1798	1799	1800	Total of 8 Years.	D° 8 Yrs. preceding

We thus fee, distinctly, that the active spirit of domestic melioration, which existed, before the war began, continued, with augmented energy, during the progress of hostilities. The world will contemplate this enterprize with wonder. Millions, and tens of millions, have been raised upon the people, for carrying on an interesting war, yet they found money, as they had skill, and industry, to improve their island. Great Britain, as it has been more improved, during the war, is worth more, at the conclusion of it, than when unprovoked hostilities be-

gar. And, this happy isle, where the foot of the foe never treads, if it were brought to the hammer, would fell for more, than it would have fetched, at any former period, in proportion to its additional

improvements.

Yet, what do all those improvements of the country avail, if the people have not victual to eat? This question would lead us into the wide, and thorny, wilderness of agricultural reports. But though I have been, regularly, summoned to contribute a day's labour, in this unweeded garden, I have hitherto been frightened by the toil. I had the honour to receive, some months ago, a circular letter from the Board of Agriculture; soliciting such observations, as I might have to make, with regard to the best mode of preventing suture scarcity. But, my various avocations have hitherto prevented me from essaying so arduous a subject.

I will, however, contribute two, or three truisms, which may induce some person, who has more leifure, and more skill, than I can command, to add a sew more; in the hope, that a regular collection of truisms may be formed, on this interesting subject: for, amidst a long continued clamour of contradiction, I have, scarcely, sound any two persons, who could agree upon any one position.

1st Truism. There have been ten times more agricultural melioration, during the present reign, than in any anterior period\*. Yet, is it, in this

reign,

<sup>\*</sup> The foregoing pages furnish abundant proofs of that pofition,

reign, that we appear to have lost the export of corn. It would be very absurd logic to maintain, that the surface of our island, in proportion as it is improved, by inclosing, draining, and by every fort of manurance, became less productive. There are two facts, which are incontrovertible, and are very interesting: 1st. During the six-and-thirty years, which ended with 1800, the surface of our island was, continually, improved, beyond all former example, and in the last ten years of this period more, than in the surface of years, our importation of corn began; and has increased the most, towards the conclusion of this long period\*.

2d TRUISM: During the present reign, there have been more skill, more money, and more efficient work, employed, in our agriculture, than in any

fition: but, I will rely on an authority, which will not be disputed. The report of the Committee of the House of Commons, on the waste lands, stated, in 1797,

A Table of the acts of inclosure, with the extent of land inclosed in the following reigns:—

CIO.	croice in the ronowing reigns.							
		No, of acres						
In Q. Anne's		-	2	-	1,439			
In George I.	<del></del>		16	-	17,660			
In George II.	-	-	226	-	318,778			
In George III.			1,532	-	2,804,197			

<sup>\*</sup> The averages in the corn accounts, printed by the order of parliament, on the 14th of November, 1800, establish the fact as to the imports; and the journals of parliament, and the statute book, as to the improvements.

former period. By a necessary progress, the nation had become more knowing, more opulent, and more enterprising. The farmers have been better paid, for their pains, in this reign, than in prior times \*. It would be a very absurd argument, then, to maintain, that our fields produce less, as they are better cultivated.

3d TRUISM: This island must, necessarily, produce more victual, in the present reign, than in any former period. From more skill, more expence, and more manurance, the appropriate result must be more product. He, then, would be an absurd reasoner, who, from such premises, should maintain, that more skill, more expence, and more cultivation, must necessarily produce less, upon a medium of seasons.

From those three TRUISMS, there results, in my judgment, a fourth truism, though other persons may think, differently, from me upon the point: that all the late struggle, canvassing, and clamour, for a general act of inclosure, are groundless. If the country be in a continual course of improvement, and if this progress of melioration gather energy, as it proceeds, this much-sought-for measure is groundless, in its policy. If a general inclosure act would divert from profitable employments a greater portion of capital, of labour, and of enterprize, than would, otherwise, run into that channel, such an act would introduce an evil, rather

<sup>\*</sup> The corn accounts printed by the faid order of the 14th of November, 1800.

than a good, into our political economy. If all interests, however, could be made to concur, there seems to be no other objection to a general inclosure act, except, that the spirit of improvement might slacken, perhaps, if that object were obtained; as lassitude generally sollows enjoyment.

From the foregoing truisms, I am inclined, strongly, to think, that there is more victual\* produced, at present, in a bad season, than there was, formerly, produced in England, and Wales, during a good season. If we throw into the scale the vast quantity

\* I use the good old English word victual, as it was used by Shakspeare, and by the parliament, in the reign of Charles II. in a larger sense, than corn, as stores for the support of life.

† The greatest surplus of corn, which was ever sent out of this country, was, in the five years, ending with 1754; and which amounted to \_\_\_\_\_\_ £. 1,087,594 qrs.

The quantity of corn, which was imported according to an average of the five years of fcarcity, ended with 1799, was

1,190,131

2,277,725

Now, that quantity would not fupply the additional number of people, which enumeration has, at length, found to be 2,830,000, who, yearly, confume one quarter each person, or 2,830,000 qrs. The annual deficiency is no less than 552,272 quarters. Mr. Dirom argues this question, upon the supposition, that each person consumes two quarters; 1st. because he made his estimate not only upon wheat; but, upon oats, rye, barley, malt; 2ndly. because he included, also, the consumption of pastrymakers, and starch-makers, of poultry, pigs, horses, which are not used in agriculture; and even the brewery and distillery.

quantity of potatoes, which are now, annually, grown, more than there were fifty years ago, the balance, will show, that there is raised at present, an infinitely greater quantity of victual in bad seasons, than there was, fifty years ago, raised, in good seasons.

The difficulty, and the diffress, of late times, did not arise from our producing less, notwithstanding the unfavourable feasons; but from our consuming more: in good feafons, we produce infinitely more victual, than was raifed in the prosperous years. ending with 1754; perhaps enough, in plentiful years, as we may infer, from the foregoing details: but, we consume much more; as we may learn from the well known amount of the imports of corn, during recent times. We have 2,830,000 more people, in England, and Wales, at prefent, as we know, from the late enumeration, than there existed, in the same countries, at the epoch of the bounty on corn, in 1689: if each consumer use at least one quarter a year, then, the general consumption of fuch persons must be 2,830,000 quarters of every fort of grain\*: and, consequently, more

The fact is, the above statements of the exports, and imports, include all forts of grain: and, consequently, the estimate of the consumption ought to include every fort of consumer.

<sup>\*</sup> The Rev. John Howlett fays, Dispersion, p. 11,—" If "these additional inhabitants live upon barley, they will each require twelve bushels a year, instead of eight of wheat; if upon oats, nearly fixteen bushels." Mr. Dirom, in his Corn Tracts, p. 15, says, "wheat is double the value of the inserior grain; I shall throw upon the general consumption of the "people,

than half a million of quarters beyond the former export, and recent import, of corn, added together, as we have feen. Neither is there included, in this estimate, the starch making, the pastry, the poultrymeat, the pig-meat, the horse corn, the distillery, the brewery. The confumption is, therefore, not only much greater now, than formerly; but many confumers, who, in less opulent times, eat rye-meal, and oat-meal, now eat flower of wheat. The confumption of the whole body of confumers is not only more expensive, but it is more wasteful, at present, than formerly. A revolution, which has gradually taken place, during the last fifty, or fixty years, has lessened the number of suppliers, and added, largely, to the body of confumers. The cottagers have been driven into villages;

"ployed in agriculture, hogs, poultry, starch-makers, &c. and when it is considered, that a great number of people live chiefly upon the inferior grain, we cannot, under all these circumstances, appropriate less than two quarters of the feveral forts of grain, over-hand, to the consumption of each person, upon an average yearly, for bread, beer, spirits, &c." With those intimations, the well-informed author of the Corn Tracts had already concurred. According to the principles of Mr. C. Smith, [Tracts 18] we may now estimate the whole consumption of England, and Wales, which, the enumeration has assured us, contain 9,330,000 persons.

				Quarters.
Bread corn, at one quarter,	each	-	100	9,330,000
Corn made into drink	-	20	40	4,665,000
Corn for cattle, poultry, &c.	-	-	We	4,665,000

The total of home confumption - 18,660,000

the villagers have been forced into towns; and the townsmen have been enticed into cities: while the cottagers remained in their hamlets; and the villagers in their vicinages, they derived much of their subsistence from the soil, whereon they lived: when they became townsmen, and citizens, they ceased to be partly suppliers, and began to be altogether consumers.

We owe much of this disadvantageous change to our modern fystem of agriculture. This fystem, as it has been long practifed, has produced the most calamitous effects, without effecting all the falutary confequences, for which it is celebrated. By confolidating farms to an enormous extent; by forcing cottagers from their hamlets; by pretending to make much profit with little labour; the agricultural fystem has depopulated, and is depopulating the shires, wherein it prevails. This evil, in our political œconomy, has been long fuspected: it is now certain. There is not a proposition, in the mathematics, that is more demonstrable, than the position, that the agricultural system depopulates the country\*. The agricultural fystem attempts to ape the manufacturing

\* The enumeration of 1801, among a thousand other informations, evinces the truth of that position:

	No of Houses in 1690.		Ditto- in 1801.	Decrease.
In Bedfordshire -	12,170	-	12,073	<b>—</b> 97
Çambridgeshire	- 18,629	-	16,451	- 2,178
Essex	- 40,545	-	39,398	<b>—</b> 1,147
Huntingdon	8,713	-	7,072	- 1,641
				Lincoln

manufacturing fystem, which has a quite different tendency. The great aim of the manufacturing system is to produce a better commodity, at a cheaper rate. The constant effect of the agricultural system is to produce a worse commodity, at a dearer rate. While peers sink into peasants; and peasants rise into peers; the great body of the people is pining in want.

There may be politicians, indeed, who, confidering money as the chief end of all policy, may think, that forcing the cottagers into towns, and the villagers into cities, is a good to be defired, rather than an evil to be deplored. Yes, we have had statesmen, who laid it down, as a maxim, that modern war is merely an affair of expence. The wealthiest nation, it was naturally presumed, would ultimately be the most triumphant; and

These are all agricultural counties: and, the diminution of the numbers of their houses, during the intervening period, is a sad demonstration how much the agricultural system tends to depopulate the countries, which are comprehended within the circle of its unhappy influence. An equal number of the shires of Scotland, which have been the most improved, by agriculture, have been, in the same manner, depopulated. The ministers of many parishes, in North Britain, point out, in their statistical accounts, the consolidation of farms, the sheep-farming, the driving the people from the hamlets into towns, as the obvious causes of the depopulation of their several parishes.

final

final victory was supposed to be appended to the weightiest purse. We have lived, however, to see a nation arife, who could make conquests, without money; as, indeed, history had, already, recorded the conquests of poverty over riches. Europe has recently feen, that our wealth could not obtain warriors. And we were driven by necessity, or were induced by wisdom, to entrust the fafety of our island to the virtuous spirit of our people. Where is that illustrious regiment, which overthrew the invincible phalanx, to find recruits. If sheep be driven into our northern glens, as a more valuable animal than the human race? Where shall our armies obtain the hardiest levies, if the villagers be forced into cities? We may now perceive, that money cannot buy men; that men are of more value than money: the policy, then, which regards riches. as the chief good, must end in the ruin of the state: and that statesman, who should consider the Exchequer, as the only object of his care, would foon be without an Exchequer to care for. From those intimations, we may infer what must be the attentions of the wifest government of the wifest of people.

As I have been asked my opinion, with regard to scarcity, the past, and the future, I will submit my judgment upon this interesting subject. During the war, and the dearth, I was silent, though I did not always approve of what was done, or faid. Now, that we have peace, and plenty, I will freely deliver my sentiments, which, to those, who may not recollect, that I am not writing for any party, will.

will, perhaps, appear to be contradictory. It is necessary, in the first place, to lay before the reader. a Statement of the Prices of Wheat, according to the audit book of Eton College, from 1685, to 1771. and from this year to 1801, according to the average of the Eton prices, reduced, however, to the statute quarter, and to the middling quality, and of Mr. Catherwood's prices of England and Wales: of the excess of Exports and Imports of Corn, from the year 1696, to 1800, inclusive, including Scotland, after the union; together with the bounties, which were paid, during the feveral periods, wherein bounties were given: the bounties of the three years, ending with 1691, and those of the five years, ending with 1696, were computed at only the half of what the bounties amounted to, in the subsequent years, when the prices of corn were the fame.

The epoch of the bounty on corn is 1689. In my copy of the Statutes, the bounty is called a reward to persons exporting corn\*. The price of middling whrat, at that epoch, according to a five years average, ending with 1689, was 28s. 9d. a statute quarter. A long period of fine seasons had reduced the market value to that low price. And this low price, and those fine seasons, induced the parliament to pass the before mentioned act, "for encouraging the exportation of corn"; when wheat should be at 48s. or under. The value of money was, at that epoch, in the ratio of 226, in 1689, to 562, in 1800†; and, of consequence, £ 1. in 1689, had as much power over the necessaries of life, as £. 2. 9s. 8 \(\frac{3}{4}d\). had, in 1800.

The fine feafons did not continue long. The feafons, however, were so far favourable, in 1690, and 1691, as to reduce the prices below the average of 28s. 9d. notwithstanding the bounty, and the act, encouraging exportation. The seasons changed from good to bad, in 1692; and continued extremely unfavourable till 1702, when the price sell below the average of 28s. 9d. Those times were long remembered, as the aear years of the Revolution, when the price of middling wheat rose to 56s. the statute quarter, in 1696. We have had no such scarcity,

<sup>\* 1</sup> Wm. & Mary, ch. 12.

<sup>+</sup> See Sir George Shuckburgh Evelyn's interesting, and important, Table of the appreciation of money, in the Transactions of the Royal Society, 1798, p. 176.

and dearth, during late times. The fine feafons returned in 1702, and continued till 1708. Two, or three, unfavourable feafons carried up the prices of wheat to 62 s. in 1709, and to 61s. 7d. in 1710. The high prices of 1800, confidering the depreciation of money, were not so high, as those of 1709, and 1710. A long course of favourable seafons now succeeded; and continued, with very little interruption, till 1756, and 1757, when the price of middling wheat rose to 47s. 4d. the statute quarter, which, having a regard to the depreciation of money, was still under the low price of 1689. At length, clamour, and tumult, began; which have continued, during bad seasons, till the present times.

Some infift that the bounties have fructified our fields: fome, that they have not prevented the return of bad feafons, nor benefited our farmers, in good feafons. The late Dr. Adam Smith maintained that, without benefiting the farmers, the bounty did harm, to the great body of the people, in two respects; it raised the price, in the home market; and it transferred vast sums of money, at the most distressful times, from the purses of the consumers, to the pockets of the jobbers\*. The Reverend John Howlett, with as sound a head as Doctor Smith, and more facts before his eyes, cannot see the beneficial operation of the bounty†." There

<sup>\*</sup> Wealth of Nations, v. ii. p. 266.

<sup>†</sup> The Dispersion of Gloomy Apprehensions, 1797. p. 23.

is a curious circumstance, which neither of those quick-fighted writers, diffinctly, faw. Till the corn act of 1791, there was no proper mode prefcribed by law, for ascertaining the prices of grain\*. The customers, who computed the bounty, at the custom-house, and the brokers, who received it, understood each other: but, neither the growers of corn, nor the confumers, knew the prices of grain, except the price of the narrow market, wherein they dealt. Neither did the king, and parliament, during former reigns, know the general prices of grain, except from the noise, and tumult, of the needy. Now, those facts, not only confirm the reasonings of Smith, and Howlett, but evince, that the bounty went directly from the pockets of the confumers into the purses of the brokers, yet without benefiting the growers. From the first establishment of the bounty till its recent cessation, from natural causes, upwards of seven millions of money have been paid by the public, not for a good purpose, but for a bad purpose. It has, moreover, created a continued contest, by a struggle between avarice, and want. And, to the fcandal of the better judgment of the nation, a probable good has been allowed, for more than a century, to outface two positive evils: the probable good was the supposed fructification of our fields: the two positive evils were the payment of feven millions of money, for

<sup>\*</sup> The register of corn prices began, indeed, in 1771; but, it was inadequate to its end.

making corn dearer in the home market, without contributing to the manurance of the foil\*.

The struggle, and perseverance, in promoting the export of the produce of agriculture, in former times, appears quite wonderful to the haraffed eyes of the present days. The dear years of the Revolution began, in 1692. The prices of grain rose to the greatest heighth, in 1696. They continued very high till 1699, when they began to abate, till the better feafons returned, in 1700. The export of corn was prohibited, in 1699, for one year t. The bounty was, foon afterwards, withdrawn, from the 9th of February, 1699, to the 20th of September, 1700 ±. And, the duties, which were payable on the export of victual was repealed, for ever, in 1700 . From those facts, it is apparent, that the king, and parliament, in those days, either did not know

<sup>\*</sup> By the corn act of 1773, the original bounty price of 48 s. a quarter of wheat was reduced to a rate under 44 s.; and this reduced rate was continued by the corn act of 1791. But, the 20 G. 3. ch. 31, feemed to introduce a new principle, when it allowed only one half of the bounty on corn, exported in neutral ships.

<sup>#</sup> By 10 Wm. ch. 3. By 10, 11, Wm. ch. 4. the distillery was stopped, for a season.

<sup>‡</sup> By 11 Wm. ch. 1.—All those alleviations came, after the evil day had passed.

<sup>§</sup> By 11, 12, Wm. ch. 20.—During that reign too, there was passed "An Act for the encouragement of the breeding and feeding of cattle." 3 Wm. & M. ch. 8. The great object

know the state of the prices, or did not seel, for the miseries of the poor, with the same pungency, as the king, and parliament, seel at present. The years 1709, and 1710, were times of greater dearths, though perhaps of less calamity, than those of king William's reign. The only anodyne, which was applied, in those two years, was the measure of preventing the export of corn, for one year, without withdrawing the bounty\*. There was very little grain imported, during those two periods of severe dearths. And, this sact seems to evince, that the prevailing passion for export, on both those sad occasions, drove the consumers to rigid œconomy, which, generally, is the best resource.

A long course of savourable seasons prevented the return of dearth till 1740, which was not comparable to the dear years of king William, and queen Anne. The export of corn was, however, stopped, in 1741. The same measure was adopted, in 1757, when a worse season, in the preceding year, occasioned a louder outcry, and greater tumult. The outcry, and the tumult, and the alarm, rose to a greater height, during the unfavourable seasons of

ject of this encouragement, which was given at the commencement of the dear years, confisted, in taking off the duties on the exportation of all the products of agriculture. I do not observe, that any measure was taken, during nine years of want, to stop the exportation, or to repeal this act, giving a reward, for raising the prices of the products of agriculture, in the home market.

<sup>\*</sup> By the 8 An. ch. 2.

1765, 1766, 1767, though neither the nominal, nor the real, prices of victual were equal to those of the times of queen Anne, or king William. It was this clamour of contradiction, which induced ingenious men to attribute the apparent prices, and subfequent distress, to the depreciation of money. Montesquieu, and Hume, had already talked of the effect of riches, and luxury, upon the necessaries of life. But, it was Soame Jenyns, who long fat at the Board of Trade, who professedly inculcated, " that the present high price of provisions "[1766] arises, principally, from the poverty of "the public; and the wealth of individuals\*." But, as he knew not how to calculate the depreciation of money, he was unable to apply it, specifically, to his point.

The passion, which had so long contrived ways and means, for exporting the necessaries of life, was at length met by a contrary passion. And, from 1766, to 1773, encouragements were, continually, offered, for the importation of the necessaries of life. This importation, and that passion, continued to the present times. The year 1796 is the

epoch

<sup>\*</sup> In his Thoughts on the Causes, and Consequences, of the present high Price of Provisions; Dodsley, 1767, 8vo. He was, immediately, answered, by a pamphlet, abusing all the servants of the public, who were the very persons, that suffered the most, from the depreciation of money.

<sup>†</sup> By the various acts of parliament, in those times. The obvious change, in the current of the corn trade, may be traced back not only to the bad seasons, but, to those parliamentary acts.

epoch of the bounty on the *importation* of victual\*. This first essay cost the nation £.565,802. The unfavourable seasons, and the continued fright, gave rise to greater, and more various bounties, on the *importation* of victual†. This second essay has already intercepted, in its course to the exchequer, no less than £.1,251,479. Of victual, there was imported, in 1800, as we have seen, 2,259,379, statute quarters. Such are the effects of carrying policy to extremes: in one period, exportation was too much rewarded: in another, importation was too much forced. The people—

" Feel by turns the bitter change "Of fiercee xtremes, extremes by change more fierce."

In the mean time, fomething like a corn fystem was adopted, in 1773, by regulating the export, and import, of grain, according to given prices ‡. Yet, was that fystem said " to be founded on radical mistakes §." During the subsequent eighteen years, the corn laws were involved in a complete chaos. The ablest lawyers in England could not say, distinctly, by what law the exports, and imports, of grain were to be regulated. In this state of legal anarchy, one of the greatest statesmen, whom this country has ever produced, undertook the ar-

<sup>§</sup> Mr. Young's Pol. Arithmetic, p. 40.

duous task of drawing order from consusion. All the elaboration of diligence, and all the wisdom of experience, were now employed, in forming the Corn Act of 1791\*. Yet, alas! what is the wisdom of the wise. A continued succession of unsavourable seasons has rendered nugatory the judicious regulations of that systematic law.

During more than half a century, we have been stunned with controversy about the corn laws, which feem to be abrogated, by a higher power than parliament. "The grand, and leading, error; " upon this subject, seems to be," says the Rev. John Howlett, "that we ascribe too much to hu-"man contrivance; and too little to providential " fuperintendance†." When this able man made this deep remark, he had before him many facts. When the late Doctor Smith argued this question, he could only see, with systematic eyes, the disparagement of filver. After viewing the whole operation of the corn laws, with a very acute intellect. Mr. Howlett \* " thought it manifest, that the va-" rious changes in our corn laws are fo far from " having been the only, or even any confiderable. " cause of the decrease of our exports (of corn,) " that there is no necessity for supposing, they have " been any cause at all". With this opinion, I

<sup>\* 31</sup> Geo. 3. ch. 30. This act, however, was not, finally, passed, as it had been, originally, proposed. See the notes on p. 40, 41, of the Corn Representation, lately printed for Stockdale.

<sup>+</sup> His Dispersion, 1797, p. 21.

<sup>‡</sup> Id.

concurafter a long confideration of the corn-accounts, ch were printed by order of parliament, in Nover 1800, and weighing collateral circumstance appears to me, that the seasons, either good, bad, have been the efficient causes of plenty fearcity, from the epoch of the exportation by to the present times. After fully confiderinis interesting subject, the series of cornlaws eared to me, like continued attempts to reouthe seasons. In the weighty consideration of fing the necessaries of life, there are two pointhich are beyond the power of parliament: the ature cannot regulate the course of the feaf neither can the legislature controul the fubrad filent, depreciation of money, which feer have the all-powerful force of steam: the effe unfavourable feafons may be mitigated, by best system of agriculture: the unhappy infl: of the depreciation of money may be md, by the rigid œconomy of individuals.

much, then, with regard to the bounty, and to orn-laws: I will now speak of the recent de which proceeded from various causes. Trincipal cause was, undoubtedly, a long feif unfavourable feafons. We have, as I hready shown, not only a greater number of pto feed; but, a greater number of opulent, afteful people to feed; owing to the favouralange in the circumstances of a great many In the mean time, the whole necessaries were fold upon the principles of concert. From

5

From Cornwall to Cathness, there is arlerstanda ing among the fellers, who never for that the confumers are wholly in their powerand, by means of this understanding, and of concert. there is not a free market in Britainere the balance of supply, and demand, can ve, without the interruptions of avarice. Sonf those evils have been attributed to the banl It has been urged, that the paper of the bank ingland has greatly contributed to raife the prif corn. and cattle. The abstract position is obviobsurd: and, the arguments, which have beenen, in support of that absurdity, I have alwaysfidered, as nonfensical. If it had been at that the discounts of the bank promote lation; \* that circulation encourages industry; thdustry energizes agriculture, manufacture, cerce: that all these create wealth; that wealth nders luxury; that luxury creates confumption! that confumption affects the prices; I should admitted these several deductions to be so 1 truisms: But, it is not true, in point of fact the paper of the bank of England ever come direct contact with prices, though they miter a long course of circulation. It seems, vercertain, that the country banks furnish andations to farmers: yet, have not farmers ime right to the benefits of accommodations, perchants, and other trradefinen, have, to ints. and advances, and other commercial tres The talk about paper money, on this occ is

only an outce that we are an opulent, and freespending peo!

Whether tlate war has had any great influence on prices, haeen doubted by fome, and denied by others. here is, fcarcely, a paradox, that fome philosops have not maintained. Some of our political cnomists have closely followed their tract, in the pdoxical line. One truth is clear: it was not thword war, nor the thing, which raised the pric in the domestic market: but our fleets, and our nies, have large mouths, that must be supplied: a when the public agents go into the market, wi additional demands, the prices must necessarilyise; since the price is governed by the demand, rid the fupply. If there should be an additional mand, and a lefs fupply, during feafons of fcarc, the public agents must, undoubtedly, raife prices, in a high degree. But, fome other effectof war contributed to enhance the prices still mc. When the affessed taxes, and the income tax, ve collected, the suppliers of the necessaries of lifeantrived to impose their proportion of those taxesn the consumers, in the prices of the necessary artes. The public agents have withdrawn from thmarkets: yet, the confequences of the war affect theonfumers, during the enjoyment of peace.

This intimation ads to a flight confideration of the depreciation of mey. The mean appreciation, from 1689, the each of the export bounty on

corn, to 1800, is, in the ratio of 6 to 562, nearly \*: now, the refult is, that f. 1. 1689, had as great a power over the necessal of life, as f. 2. 9s. 83 d. had, in 1800. Frome same appreciation, there is another refult. coording to a five years average, ending with 17, the price of middling wheat, per statute uarter, was f... 8 s.  $8\frac{3}{4}d.$ : now, this furn had are t a power over the necessaries of life, as f. 3 115 d. in 1800: and the average price of five dear yes ending with 1799, was only £.3. 3s.  $5^{\frac{1}{2}}d$ .: fo thhis bigb price of five dear years was not fo large the low price of middling wheat, in the five plend years, ending with 1689. From the foregg refults, we may infer, that the dear years of rent times were not equal in dearness, and misery, the dear years of a century before. The deprecion of money, according to Sir George Shuourgh Evelyn's table, from 1696 to 1800, wasn the ratio of 234.52 to 562, nearly: fo that 4. in 1696, was equal, in power, to £2. 7s. 11 in 1800: and, of consequence, the average prices wheat, in the very dear year 1696, was equal tf. 6. 14s. 2d. in in the very dear year 1800. Tldepreciation, according to the fame curious, an important, table, from 1710 to 1800, was in theatio of 2471 to 562, nearly: fo that f. I. in 110 was equal in

<sup>\*</sup> See Sir George Shuckburgh Evelys Table of the appreciation of money, in the Transactions the Royal Society, 1798, p. 176.

energy to £2. 5s. 5d. in 1800: now, the average price of the quarter of middling wheat, in 1709, was £. 3. 2s. which, in power over necessaries, was equal to £. 7. os.  $9\frac{1}{2}d$ . in 1800. It is, therefore, demonstrable, that the dearness, and distress, of recent times, were not equal to the dearness, and distress, of the several reigns of king William, and queen Anne. Under Providence, we owe the favourable difference of late times to the better state of our agriculture; proceeding from that gradual progress of improvement, which has been traced, during the two last centuries; and which has doubled in its progress, during the present reign, and has redoubled its many meliorations, during the last six and thirty years.

This subject of the depreciation of money is so interesting to the state, to the governed, as well as to the governors; that I will prefume to exhibit it, in a different light. By a parliamentary arrangement, in 1760, the civil list revenue was compensated. by an annuity of f.800,000; his Majesty having graciously offered to relinquish his hereditary revenues, in consideration of an equivalent. It is a parliamentary principle, which has been long fettled, that whoever, whether the prince, or the peafant, relinquishes any rights, for the benefit of the public, shall receive a full compensation. On that principle, was the said annuity of f. 800,000 settled, by parliament, on his Majesty, in lieu of his hereditary revenues \*. Upon that annuity, the depreciation

<sup>\* 3</sup> Geo. 3. ch. 1. The historian of our revenue does not distinctly

ation of money attached, as it equally attaches upon all other annuities. It was found necessary, therefore, in 1777, to bring the arrears of the civil lift before the parliament, for its just consideration. The civil lift debt was paid: and, the faid annuity was enlarged to £.900,000, without any very minute calculation, whether f. 900,000, in 1777, had the same power over the necessaries of life, as f. 800,000 had, in 1760. The depreciation of money, from 1760 to 1800, according to the important Table, before-mentioned, was in the ratio of 342 to 562: fo that f. I, in 1760, could command as many of the necessaries of life, as f. 1. 12s. 10d. in 1800: and, confequently, an annuity of f. 800,000, in 1760, was equal, in its faculties, to an annuity of £. 1,314,619. 17s. 7 d. in 1800. Such, then, are fome of the effects of the depreciation of money, which, as they are fubtle, and filent, cannot be eafily

tinctly state that arrangement, which comprehends the royal grace, and the parliamentary engagement. The learned Baronet, however, recapitulates the various fums, which, from time to time, have been paid, in supplementary aid, of the civil lift; and, at length, infers, that the total, during the space of twentyeight years, amounts to f. 923,196, per annum. Sir J. Sinclair's Hift. of the Public Revenue, vol. 3, p. 72. But, his fagacity feems not to have perceived, that the depreciation of money was outrunning the annuity; and his algebra did not discover, by computation, that £.923,196, in 1786, were not equal, in power of purchase, to f. 800,000, in 1760: in fact, according to the Table, and the principles, before mentioned, an annuity of f. 900,000 was equal, in its energies, during the year 1760, to an annuity of f. 1,478,947. 7 s. 4 d. in 1800. Now, the Mathematics cannot be outfaced by confidence, nor outargued by declamation!

foreseen, and cannot be wholly prevented. I have now spoken of the several points of our political economy, which I proposed to discuss, with the freedom of a man, who always thinks for himself.

Such also were some of the effects of the seventh great war, in which Britain has been engaged, since the Revolution of 1688. It is one of the principal objects of the foregoing estimate to state the losses of her trade from each of those wars. And, we have bekeld, with wonder, and comfort, that our shipping, and commerce, have, at the return of each successive pacification, been invariably more extensive, than during each preceding period of tranquillity. It has been observed, also, that in proportion as the people of the British dominions became more enlightened, more industrious, and more opulent, they equally became more able to meet the missortunes of business, and to bear the embarrassments of war.

The events, which occurred, during the late war, as well as in the period preceding, are proofs of that position. It must, indeed, be allowed, that individuals, and classes, were pressed down, by inequalities, which, however unable they are to bear burdens, cannot easily be foreseen, nor always prevented. The first effects of war, in our happy island, which never feels the ravages of the soe, are new debts, and additional taxes. Every year of hostilities brings with it some fresh loan, with appropriate subsidies to fund it. But, it will answer, sufficiently, our present purpose, since the war is concluded, to give a general view of the debts of the state, and the burdens on the people.

## THE FUNDED DEBT,

On the 5th of January, 1786, was

On the 5th of January, 1793, was

On the 1st of February, 1801, (the total of the old debt) was

Since the 1st of February, 1793, (the new debt created.) was

Of these sums, £. 19,708,750, capital, and £. 9,791, long annuities,
were on account of Ireland; £. 56,445,000 were charged on the
Income Tax: and, on the 1st of February, 1801, the Sinking-sund
Commissioners had redeemed of the new debt £. 16,182,094:
Hence

Leaving, as the permanent debt of the war

On the 1st of February, 1801, the whole of the old, and new, debt
was

<sup>&</sup>lt;sup>2</sup> On the 1st of February, 1793, the finking fund commissioners had purchased £.10,242,100, of the principal debt; and annuities, amounting to £.79,880, had fallen in; which two sums thenceforth formed essential parts of the finking fund.

b This fum includes £.1,000,000, which was applicable to the reduction of the debt; and also the dividends on £.10,242,100 stock redeemed; and, moreover, the amount of the annuities fallen in:—making together £.387,143.

c On the 1st of February, 1801, stock, amounting to £. 36,099,562 had been bought by the anking fund commissioners; and £. 123,477 annuities having fallen in, formed an additional part of the sinking fund: and £. 16,083,802 stock had been transferred to them, for the land tax redeemed.

d The above annuities are exclusive of £.230,000 annuities, which were created, by advances, to the emperor of Germany.

		6				nuities, I and Shor			e Prin ipal.			A, and rement.
~	-	. *		400	£	1,373,	550	£.238	,231,	248	£.9,29	97,000

					-							

<sup>&</sup>lt;sup>c</sup> The above principal is exclusive of £.7,502,633, 3 per cent. Stock, which were created, by advances, to the same emperor: but, it includes the capital borrowed by the loan of 1801, with its coincidents.

f Of this fum, the income tax defrays £. 19,666.

<sup>8</sup> This fum includes £.1,812,817, for the interest, and charges, of the loan of 1807. Of the whole sum, £.7,574,289 were, for interest, and management, of the national debt, which was unredeemed, on the 1st of February, 1801:—and, £.2,814,008 arise from the one per cent. sinking fund annexed to every loan, and also the interest of the stock redeemed. A surther charge of £.497,735 per annum is guaranteed, by parliament, in default of payment of the interest of certain loans, by the said emperor.

Such, then, was the funded debt of the state, as it is stated, veraciously, on the Common's Journals. Since the epoch of our national debts, there have always stood against the state certain unfunded debts, fimilar to the current accounts of individuals. Such claims cannot be fettled, till they be known; and they cannot be known, till the expences have been, for some time, incurred. The efforts of our several wars have been constantly embarrassed by unliquidated debts: and fuch debts have tended to embitter the successive return of every peace. To wind up the tail of the American war required the imposition of taxes, which amounted to upwards of f. 938,000 a year, as we have already feen. It is a great step towards the satisfaction of unsettled claims, either public, or private, when they are ascertained, and acknowledged. The same spirit, which, in financial affairs, has avowed publicity to be the best policy, has left no doubt, with regard to the amount of the unfatisfied claims on the state. The unfunded debt, on the 5th of January, 1793, exclufive of the well-known anticipations of the annual - f. 8,925,422. grants, was

The fame debt, on the 5th of January, 1801, exclusive of £.3,000,000, which was advanced by the Bank, without interest, for the renewal of her charter; and which is to be repaid, in 1806; was

17,946,186.

The great cause of the frequent accumulation of our unfunded debts is the navy, the safe-guard, and glory, of the nation. From its magnitude, and its contingencies, no less of the unfunded debt of 1801, than £.5,361,489 were incurred, for the necessary reparations of our wooden walls. Other services had demanded an additional issue of exchequer bills, amounting to £.3,740,300. And, these two services swelled the unfunded debt, of 1801, beyond that of 1793, to the sum of £.9,020,764. Prudence has, however, made a recent provision, for much of this floating debt, which depressed public credit, by its weight, and embarrassed private speculations, by its looseness\*.

Of public debts, whether unfunded, or funded, the true anodyne is a finking-fund. This remedy has existed in our *Dispensary*, since the year 1717, by the annual appropriation of £.323,434. Yet, has not this anodyne always been administered, with the attention, and success, which were due to its efficacy. The powers of a finking-fund, however recommended by publication, were almost forgotten, when it was adopted, as we have seen, under happier auspices, at the end of seventy years †. A finking fund of £.250,000, a quarter, was settled by law, in 1786. The energies of this quarterly sum was strengthened, in 1792, by a grant of £.400,000,

<sup>\*</sup> By the 42 G. 3, ch. 8, there were funded £. 6,500,000 of exchequer bills. By the 42 G. 3, ch. 9, power was given to raise £.5,000,000, by exchequer bills.

<sup>†</sup> See before p. 179-183.

and to this great addition, was superadded, in every fubsequent year, f. 200,000. At the end of the fixth year, it had, with these helps, acquired, for the state, of public debts to the amount of £.9,441,850. It had thus outrun, in this short period, the calculations of malignant science f. 2,649,237. The objection to those falutary measures, which struck the apprehensions of men the most, was the intimation, that the first distresses of war would convert the finking fund into one of the ways and means of the year. This apprehension was removed by a parliamentary declaration, in 1792, that every new loan, in future, should carry its own finking fund along with it\*. The finking fund had now shewn its energies; the people had felt its benefits; and the parliament had augmented its powers, and provided for its continuance.

The hostilities of 1793, as they demanded a new loan, also created, under the late declaration, a new sinking fund. In the same manner every loan, during the late war, was accompanied by its own provision, for its repayment. The world now saw great examples of the privations of the people, and of the magnanimity of parliament, in adhering to previous engagements, for supporting public credit. The publicity of all those measures added much to their success. The public debts were, from time to time, computed, and ascertained. The applications

<sup>\*</sup> By the act 32 G. 3. ch. 55, which invigorated the 26 G. 3. ch. 31; and which strengthened the old, by laying the foundation of a new finking fund.

of the finking fund, its past appropriations, and suture powers, were inquired into, by a parliamentary committee. At the epoch of that inquiry, in 1797, it was found that,

The old finking fund amount-

ed yearly to - - £.1,941,320.6s.2d.

The new finking fund to - 1,418,479.0s.0d.

The amount of both to £.3,359,799.6s. 2d.

The first was then operating on the old debt of - - £.240,000,000. The second was operating on the new debt of - - 130,665,896.

It now became apparent, from calculation, that the old finking fund, with all its supplementary aids, had less power of redemption over the old debt, than the new finking fund had over the new debt. And, it was equally demonstrable, that the old debt of £.240,000,000, might possibly be redeemed, in thirty-three years, from the 1st of February, 1797; and could not be of longer redemption than sifty-four years, from the same epoch\*.

The encouragements, arising from those intimations, seem only to have created desires of giving more energies to powers, which were already powerful. The *income tax* was granted, in 1798, as a

<sup>\*</sup> The Report of the Finance Committee, printed the 31st of March, 1797.

contribution for carrying on a necessary war\*: a similar income tax was granted, in 1799, but on different principles, and with diffimilar views +. At the fame time, and with analogous purposes, the land tax was fold; and the purchase money was transferred to the redemption of debts. In this manner was created, a third finking fund, which, in its energies, was still more powerful, than either of the former. By the redemption of the land tax, f. 16,083,802 of flock were transferred to the commissioners of the finking fund, who thus acquired the dividends, as the efficacious means of buying additional debts. By an obvious departure from its original defign, the income tax was dedicated to the payment of f. 56,445,000 from the conclusion of the war, in 1801, to the end of the year 1811: this then, is a finking fund of f. 5,644,500. a year, for ten years I.

By those various operations, since 1786, for the speedy diminution of the national debts, the effects have been as great, as wise men foresaw, from the energies of such powerful machinery. Before the 1st of February, 1801, there had been redeemed of the old debt £.52,183,364, and of the annuities £.123,477; whereby the principal of the old debt had been reduced from £.238,231,248 to £.186,047,884, and the annuities to £.1,250,073.

<sup>\*</sup> By 38 G. 3. ch. 16.

<sup>† 39</sup> G. 3. ch. 13.

<sup>‡</sup> Com. Journ. 22 June, 1801.

And, before the 1st of February, 1801, the finking fund commissioners had redeemed, of the new debt, f. 16, 182,094, the dividends whereof, continually, form new means of redemption. The finking fund, in 1786, was about 1-238th part of the capital permanent debt; the finking fund, in 1793, was about 1-160th part of the same debt; and estimating the finking fund, in 1801, at £. 5,500,000, this amount would be about 1-73d part of the permanent debt, in 1801\*. There will, moreover, fall in to the fame fund, by the gradual effluxion of time, before the 5th of January, 1808, annuities for years, exclusive of annuities for lives, amounting to f. 490,240. 4s. 9dt. As an account, between the exchequer, and the stock exchange, this is a very splendid statement, which does high honour to the wisdom of the parliament, and to the patience of the people.

<sup>+</sup> Finance Report, 1736, App. N° 5. The following is a statement of the annuities, and of the times, when they will successively fall in to the sinking fund:

Annuities for Long Terms.	Principal.	A muity and Management.	Time when they will full in.
		24.724 II 6 8,152 2 2 4,918 I2 7 10,597 5 3	Do 1806

<sup>\*</sup> Com. Journ. 22 June, 1801.

Every intimation evinces, indeed, that the refources of a nation, which possesses all the means of acquiring opulence; agriculture, manufactures, commerce, shipping; are almost inexhaustible. The vast wealth of Britain has been industriously obtained amidst wars, taxes, and debts. One of the great objects of this estimate has been to trace the progress of all these, and to shew the striking result. Yet, fresh events, exhibit new views of those interesting subjects. And, the subjoined statements of the permanent taxes, which had been imposed, before the war began, furnished additional proofs, that the refources of a knowing, opulent, and enterprizing people, are beyond calculation. The following details will convey the informations of experience:

The net produce of the permanent taxes was - £. 10,194,259
Added, for funding the floating debts of the American war - 938,000

£.11,132,259
Added from the confolidation act, and from duties imposed, in 1789 - 137,000

£. 14,284,000

13,941,000

1793, January 5, all those taxes pro-

duced net

1794

1

THE ST	FREN	GTH	OF	G.	BRITAIN.	347
--------	------	-----	----	----	----------	-----

1795	D۰	-	~	$D^{\circ}$	- £	.13,858,000
1796	D°	alm	-	$D_{\circ}$	Are	13,557,000
1797	$D_{\circ}$		-	$D_{\delta}$	-	14,292,000
1798	$D_{\circ}$	-	-m	$D_{\circ}$	~	13,332,000
1799	$D_{o}$	~	-	$D_{\circ}$	-	14,275,000
1800	$D_{\circ}$	-	~	D.		15,743,109
1801	$D_{\circ}$	~	**	$D_{\circ}$	- +	14,194,539

This last sum of net produce, deducting the duties, arising from the consolidation act, and the taxes imposed, in 1789, exceeded the net produce of the permanent taxes, on the 5th of January, 1784, together with those imposed, in 1784, and 1785, by the vast sum of £.2,925,539. And, this last sum, being the net produce of the old permanent taxes, on the 5th of January, 1801, sell below the net produce of the preceding year about £.1,150,000, owing, chiefly, to the bad effects of an unprosperous season.

In the mean time, there had been imposed the various taxes, which were necessary, for the loans, and expences of the late war; and which seem not to have lessened the produce of the previous revenue, as had happened, during the distressful times of king William.

1801, 5 Jan. The net produce of the taxes, which were imposed, fince 5th Jan. 1793, was - - £. 8,079,076.

1801, 5 Jan. The whole permanented taxes amounted to 22,273,615. In 1797, the gross receipt of taxes, deducting repayments, discounts, drawbacks, loans, and monies paid by government, was £.23,076,179.

monitos para of go.		~ "	27-1-1-17
In 1798 D° -	-	$D^{\circ}$ 3	30,176,303.
1799 - D° -		$D^{\circ}$ 3	34,750,976.
1800 D	-	D° 3	3,535,016.

This last produce, being an increase, compared with that of 1797, of £.10,458,837; compared with that of 1798 of £.3,358,713; and a diminution of £.1,215,960, when compared with the produce of 1799. All those facts, having a proper regard to the unproductive seasons, indicate the vigorous faculties of this wealth-producing nation.

The future *income*, and *outgoing*, of the state, may be estimated, in the following manner:

The old permanent taxes at - f. 15,740,000
The new permanent taxes at - 8,205,000
Further produce of the taxes of the years 1799, 1800, and 1801, at 2,350,000
The land, and malt, taxes at - 2,558,000

The total at £. 28,853,000

This total is obviously exclusive of the profit of a lottery, and of any participation of the territorial revenues of the East India Company.

The outgoings must consist of the vast charges of

the national debts; including, however, what has been bought, for the state, by the sinking fund commissioners: and, secondly, the peace establishment must be provided for, to whatever amount the wisdom of the nation may think proper, all circumstances of an extraordinary conjuncture duly considered.

Such were the financial operations, which this nation alone could perform, during a war, that has been beyond example expensive, from its unexampled efforts; and this expence was heightened, by unfavourable feafons, and the highest charge was made still more distressful, by a worse exasperation, the depreciation of money. Every financial contract has, however, been honeftly executed. The malignant prophecies, which foretold, that the finking fund would be converted into a war fubfidy, the moment that hostilities should press upon the people, have happily remained unfulfilled. Instead of diverting that fund, from its falutary end, a fecond finking fund has been made of more energy, than the first, and a third finking fund has been fuperadded of more power of redemption, than both. A fystem of finance was, at length, adopted, in confequence of those various operations, which promised to preclude the increase of the national debt; as the permanent charges to be yearly incurred were never to exceed the annual amount of the finking fund\*. In this manner, then, was every project of the ene-

<sup>\*</sup> Brief Examination, p. 14.

my, for ruining our public credit, wholly disappointed. As new demands to a vast amount had thus been created, by means of those sinking sunds, for the national debts, the public securities became, both in theory, and in sact, much more valuable, in the hands of the national creditors. It may now gratify a rational curiosity to see, by an enumeration of particulars, a comparative state of the prices of the public stocks, in the two sirst years of the last peace, and the two last years of the late war.

A STATEMENT of the prices of the 3 per cent. confols, in each month, of the four following years, comparing two years of peace, with two years of war:

January     —     —     55 6 5 3 8 6 6 6 6 6 6 6 6 6 6 6 6 6 6 6 6 6 6	
$\begin{array}{cccccccccccccccccccccccccccccccccccc$	00 1801
November 550 68 6	1 \$ 56 \$ 56 \$ 60 \$ 60 \$ 60 \$ 60 \$ 60 \$ 60

During all those operations of finance, and of war, the gains of our enterprizing people were beyond calculation, however the unproductive classes may have suffered, from the depreciation of money, and the inequality of taxation. Our commerce became more than double to its greatest extent, during the happiest years of peace\*. We added mean time many ships to our ancient stock †. And, above all those causes of comfort, we improved the surface of our island, during the pressures of war, and the inselicities of seasons, beyond the greatest enterprizes of the most prosperous times ‡.

At length, peace came unlooked for, on a day, which will always be deemed propitious to Britain. The new century dawned on the British isles, with a very inauspicious aspect. While they were engaged, in an arduous contest, with a people, who had either overpowered, or overawed, the continental states, the nations of the north entered into a league, that had, for its end, the ruin of the naval strength of Great Britain. The pilots, who had conducted our vessel through many a storm, relinquished the helm, while the clouds looked black, in our horizon. At this portentous moment, God thought fit to afflict his majesty with sickness. The king's recovery, as it was granted to the prayers of his people, was also marked, by the appointment of new steersmen, while our atmosphere was still

<sup>\*</sup> See before the Chronological Table.

<sup>†</sup> There were, in 1793, of registered shipping belonging to Great Britain, 1,367,420 tons, and, in 1800, 1,628,439 tons.

<sup>†</sup> In the eight years of wat, ending with 1800, the parliament, as we have feen, passed acts, for local improvements, to the number of — — — 1,124
In the eight years of preceding peace — 750

overclouded, by many vapours of ill omened darkness. Such a criss, as it was unexampled, required many trials of temper, great efforts of perseverance, and greater exertions of fortitude.

These national virtues, as they were practifed to their full extent, were rewarded with proportional fuccess. The valour, and the skill, of our feamen, foon convinced the Danes, that their defences, however constructed by science, and defended by bravery, were unable to protect their capital. In the moment of victory, our humanity taught them, that they might trust to our moderation, after their own resources had failed. The confidence of their Rivals in peace, and Affociates in hostility, was abated, as much by our conciliation, as by our fuccefs. The demise of the fovereign of Russia introduced reason, into her councils, and sense, into her politics. And, the troubles of the Baltic were calmed by a convention, which will be long remembered, in our naval jurisprudence, as it secured our naval power upon systematic principles, that were now acknowledged: by yielding fomething to misconception; by explaining doubts; by removing difficulties: we preferved the effence of our naval practice, without departing from our national dignity\*. In the conduct of nations, statesmen, if they be wife, will allow themselves to be governed by the circumstances, wherein they are placed, whether adverse, or fortunate.

Meantime,

<sup>\*</sup> See a Vindication of the Russian Convention, in Six Letters, which were lately printed for Wright, in Piccadilly.

Meantime, our foldiers hastened to Egypt, where they emulated the disciplined intrepidity of our failors. Victory attended their efforts. And, their perseverance, their conduct, and their valour, compelled a brave, an artful, and an obstinate enemy to capitulate, after every effort to relieve a favourite army had failed. At the same time that France was thus unfuccefsful, in fending fuccours to a fettlement, which she ardently wished to save, she was equally unable to protect her own coafts from bombardment, while she threatened ours. We may eafily suppose, that the pacification of the North; the misfortunes of the South; the spirit of our people; and the address of our statesmen; induced the foe, after a long struggle between his subtilty, and necessities, to think feriously of pacification.

An unlooked for peace, as it had been fettled in filence, was hailed by general acclamations. But, the affairs of life do not admit of unanimity. There will ever be conceit and felf-fufficiency; interest and disappointment; envy and malignity; to disapprove of every mode of treaty, and to contest every specification of terms, which the wisdom of man can devise. He, however, who comes out to oppose the return of peace, with all her train of blessings, ought to be provided with strong reasons, for his opposition, if he have any character to support, or any name to risk.

The statesman, who enters into the vestibule of the temple of concord, needs not vouch necessity, for jus-

A a tifying

tifying a step, that is to bring peace to the people, while he pushes far from their business, and bosoms, war, with his poignard, and his poison. Peace is a deity to be courted: war is a demon to be driven away. Peace, when lost, is a benefit, which ought to be regained, by every stratagem of address, and every effort of conciliation: war, when pressing upon us, is a burden to be thrown off, on the first occasion, upon whatever motive. In every fair discussion upon the topicks of peace, and war, the debate must turn upon the terms, rather than the principle; fince peace, in itself, is a good; while war, in itself, is an evil: and, the statesmen, who produces pacification, in the place of hostilities, merits "general applause, and cheerful shout;" but not the fnarl of disappointment, the growl of malignity, or the contestation of felf-fusficiency. To all those, then, who prefer the miseries of war to the comforts of peace, may be applied what Burleigh intimated, with prophetic filence, to Effex, in the presence of Elizabeth, and in the words of the Pfalmist: " blood thirsty men shall not outlive half " their days."

I do not, therefore, concur with those, who defend peace, by the plea of necessity; because what is defirable ought always to be welcome: and what is desirable, and welcome, is an object of applause, rather than a charge for defence. I do not agree, then, that our late peace was either called for by necessity, or ought to be vindicated by notions of mecessity: nor, do I admit, that our late peace needs any vindication; as it is fit in itself. Nay; admitting the general principle to be indisputable, may not peace be ill-timed, ill-negociated, unadvised, and unsafe?

Yes: but, was the late peace ill-timed? We had calmed the troubles of the north, by measures of fuch energy, and address, as did honour to the valour of our arms, and to the temper of our negociation: we there displayed our magnanimity, while we fecured our rights. Our arms had equally triumphed, in the fouth, on those arid fands, where the enemy erewhile had gathered laurels, which were now blafted by our equal conduct, and fuperior valour. France, virtually, avowed to all Europe her inferiority, when she could not succour the diffress of her settlement, nor avert the disgrace of her arms. And, it was in the hour of victory, not in the moment of defeat, that we offered negociation, and agreed to peace. But, if you were fuccefsful, in the Baltic, and victorious, in Egypt, why make peace, why negociate? To fuch light queftions, in fo weighty a cause, "this manifest, and " unanswerable, argument" must be given; peace is ever defirable: war is always offenfive. The late peace, then, was not ill-timed: but, it may have been ill-negociated.

If fecrecy and fuccess, be proofs, however, of bad negociation, the late peace must be allowed to be an ill-negociated treaty. One statesman deseats his own ends, by his own statesiness: another statesman gains his purpose, by his condescension: that states-

man chooses to look at his measures through the spectacles of another: this thinks fit, to see with his own eyes; judging with Lavater, that the look, and manner, may fometimes disclose the working of the head, and often betray the concealments of the heart. Elizabeth, wishing to fearch the foul of Henry IV. about the peace of Vervins, fent her fecretary, Sir Robert Cecil, to France: she fent Walfingham to James VI. of Scotland, with a fimilar defign\*. It is no great disparagement to any of our flatefmen to mention those accomplished secretaries of an able queen. Whether our present fecretary ever moved from Downing-square to gain his defirable end, I am yet to learn. If the object, then, justify the means; and the means produce fuccess; the treaty cannot be faid to have produced an ill-negociated peace.

But, it is ftill supposed to have been unadvised. Yet, was the time well chosen; the means were successful; and the result was happy. This objection, then, is only one of the abuses of sophistry, which, with its usual artifice, converts prudence into imprudence, and transforms, with its magic wand, discretion into indiscretion.

Yet, allowing what has been proved, that the peace was not unadvifed, the treaty is supposed to be unsafe. A full discussion of this topic would lead

into

<sup>\*</sup> Birch's Mem. of Q. Elizabeth, vol. ii. p. 373: when Henry 1V. being hard pressed in the argument, betrayed some impatience, Cecil said, to him, "He was no ordinary ambassa-" dor, respecting his place."

into a wide confideration of the past, the present, and the future. During every war, Great Britain is the enemy, from whom France has the most to fear; whether she consider the intelligence of her counfels, the bravery of her people, or the extent of her refources. During the late war, Great Britain was the only power, on whom France was unable to make any impression. Great Britain was the power, who gave France the feverest blows, and inflicted on her the deepest wounds. Her fleets were thereby crippled; her coasts were blocked up; her trade was annihilated; her manufactures were ruined: and, during the last months of hostility, Great Britain triumphed over France, by land, as well as by fea. Peace with other powers was of little avail to France, while war with Great Britain remained: and peace with Great Britain, was, therefore, received by France, with the utmost fervour of welcome; because it brought with it the most tranquillity, and the most comfort; it produced the least fear of danger, either foreign, or domestic, and the most hope of profit, from internal industry, and external trade. If France, then, know her own interest, or feel her own happiness; if France, like other nations, reason from experience; she will not foon meditate another attack on her most intelligent, most powerful, and most persevering, opponent. As to confiderations of the present; Great Britain enjoyed from the auspicious day of the signature of the preliminaries of pacification, most of the benefits of peace, with the usual energies of war.

As to the future, this must depend partly on our opposite, and partly on ourselves: if she recollect the experience of the past; if she value the profits of the present; if she regard the blessings of the future; France will not soon provoke the most powerful enmity of Britain. On our side; our statesmen will probably govern themselves, like their fathers, by the circumstances, wherein they may find themselves; by the operations of time, and chance, which happen to all men: but, one truth is certain,

- " Come what come may,
- " Time and the hour runs through the roughest day."

From the era of the Revolution to the epoch of the preliminaries, our conftitution has supported itself by its own energy against treason, privy conspiracy, and rebellion. Jacobinism always has been; and ever will be: but, such is the vigour of our constitution, that it can only be endangered by the self-sufficiency of those, who are entrusted, with its safety; and who seldom suspect their own conceits, it till warned, or by experience taught." Those arms, which lately supported our rights, and spread our glories, will, no doubt, be laid up with circumspection, repaired with care; and renovated, with a proper attention to the past, to the present, and to the future.

Thus much, then, with regard to the general question, whether peace ought to be received with cheerful shout. We may now add a word, or two, on the mode of the treaty and its terms. It was laid down by France, we will suppose, for a preliminary principle,

principle, that, according to her constitution, whatever formed an integral part of the dominions of the republic could not be relinquished by negociation. At the opening of the treaty, it thus became necesfary for Britain to answer an important question, in moral arithmetic: it was now to be calculated, whether what she had conquered from France, was worth the expence of a campaign, without estimating the loss of lives, or the fickleness of fortune. If we assume the charge of 1801, as a proper average, we may fairly estimate the expences of the campaign of 1802, at forty millions. Now, would the fee simple of the conquered countries have fold for forty millions? No. Did they produce any fubfidy, for carrying on the war? No. Would they, in peace, had they been retained, yielded any revenue, for easing the burdens of the people? No. We may allow these answers, from the experience of the past. The soil of the Ceded Islands, by the peace of 1763, fold for twopence halfpenny farthing. And, they yearly yielded no revenue, which could form a way, or mean, for easing the annual expence of the British people: they employed, however, a few ships; they furnished some factorages; and they confumed fome manufactures. From this experience, we may infer, that the conquered countries, had they been retained, would not have paid one farthing of the interest of forty millions. It had been an absurdity, then, in moral arithmetic, to have retained those countries, if France had not required them. And, Great Britain, upon accurate calculation A a 4

calculation, and a just view of the subject, wisely refolved to restore what was not a benefit, but a burden

The fastories, which we have restored to France, in India, are merely permissive possessions: for, the declaration of future war, and the recapture of those possessions, will be performed, at the same period. The fishery of Newfoundland, which is now returned, is in a fimilar predicament: the termination of the period of peace, and of the fishery, must be the fame. Whether fuch confiderations will have any weight with France, in her future reasonings, with regard to the renewment of war, I pretend not to know. If fad experience have any weight, either with the governors, or the governed, we may reasonably hope, that our future hostilities will never carry conquest into the West India islands of France. They cost much to gain, and much to keep; and they only constitute objects of vulgar mortification, and factious debate, when they are asked, in negociation, and are relinquished, by treaty.

Upon fuch motives, it probably was, that France demanded, and Britain relinquished the *conquered* countries, which had been taken by the one power, from the other.

Confidering the war, with some statesmen, as partly a mercantile project, it may be proper to calculate what we have gained, by the restitution of our conquests, and what we should have lost, by retaining them. The quantity of British shipping, including

including the repeated voyages, and the inward, and outward entries, which was yearly employed in the trade of France, Flanders, Holland, Spain, and her western isles, amounted, according to a three years average, ending with 1800, Ships,

- 5,744 - 581,440.

Do in the trade of the conquered West India islands, according to a three years average, ending with 1800

- 432 - 99,329.

The yearly balance of shipping, on the fide of peace - 5,312 - 482,111.

Again: the value of British manufactures exported to France, Flanders, Holland, Spain, and the Canaries, according to a fix years average, ending with 1792, was £. 2,455,631.

Do to the conquered West India isles, exclusive of Trinidad, according to a fix years average, ending with 1800

855,376.

The yearly balance, on the fide of restitution £. 1,600,255.

Viewing the war, then, as a mercantile project; and fuppofing what would not be far from the truth; that our trade with France, Flanders, Holland, Spain, and her Canaries, will return, with the restoration of peace, to nearly its former level; we may,

may, from those details, perceive how much we shall gain, by relinquishing those conquered countries, for peace.

On fuch a concession, it was natural for France. rifing a little in her tone, to propose, " that the " ocean should be free, in war." The object of this proposal was as obvious, as the answer was easy. The law of nations does not recognize the freedom of the ocean. Our naval policy, and true interest, forbid a concession, which would be fatal to both; and, if fuch a proposal be repeated, the negociation must end. In these views of the subject, it is apparent, that the negociation was conducted upon equal principles of perfect independence: France reasonably asked the restitution of those factories, and fishery, and islands, which our superiority had wrested from her. And, Britain conceded what her true interest dictated, after a fair computation, by moral arithmetic. France unreasonably asked the freedom of the ocean: and the naval interests of Britain dictated a flat refusal: yet, the negociation went on, conceding the fit, and refusing the unreasonable, to a happy end. It is equally obvious, that if Britain had been a weaker power, either in intellect, or in force, a thousand pretensions had been infifted on, which may be found in recent treaties with other states; and which prudence must have yielded, or address eluded. But, in this preliminary agreement, there appears nothing, which, by concession, or refusal, can deduct one iota from the dignity of either of the contracting

powers,

powers, however their feveral interests may be understood, from the various lights, wherein they ap-

pear.

Moral arithmetic, equally, dictated the restitution of our conquests from Spain, and Holland, when they were strenuously asked: similar calculations clearly demonstrated, that they were expensive, in war; that they had been unprofitable, in peace: and, we have feen how little was to be gained, by an industrious people, on a commercial calculation of their profit, and loss, had we retained the Dutch, and Spanish, dominions. When the minds of statesmen are inflamed with ambition, and heated with conquest, they cannot admit petty calculations of profit, and loss, whatever may be the truth of their feveral refults. I will cool the minds of fuch flatesmen, by setting them a question to answer from moral arithmetic. Would the whole of our conquests, had they been ten times more, been an adequate compensation to THE PEOPLE, for the taxes imposed on them, by the necessities of war, amounting, yearly, to f. 10,555,000, and the income tax of f. 5,800,000, in addition? No. Among cool men, the proper answer must be, Peace is the proper compensation; having manfully defended the land we live in, and fuccessfully maintained our religion, and laws.

With all those relinquishments, we have also relinquished the Cape of Good Hope, on which some statesmen have set a wonderful value. During the possession of the Dutch, the Cape was a fort of free

port, where ships might find the conveniencies of wood and water; and shipmen might buy, and fell; paying the prices, and duties, of the place. After our conquest of it, the king, by an order of council, in December, 1796, put the trade of the place, on nearly a fimilar footing, as to people in amity: they might all wood and water, buy and fell, paying the local duties; the British trader having some petty advantage. The fovereignty of the Cape is now relinquished; but the free port is retained: and we have, therefore, prudently, kept the benefit; while we have wifely thrown off the burden. Yet, fome of our statesmen, and orators, have been disposed to set a vast value on the Cape. If we had established, indeed, at this extremity of Africa, a naval arfenal, with a numerous fleet, and a powerful army, the Cape might both, in war, and peace, have over-awed Southern America; have suppressed the infurrections of the United Irishmen at Botany bay; and might have quashed the eternal troubles of the Indian Peninfula. But, at whose cost? Not of the statesmen, and orators, but at the expence of the people. Now, by this peaceful arrangement, the people are to enjoy all the pleasure, and profit, of the Cape, without paying one farthing of the expence.

We have, however, retained Trinidad, and Ceylon. Nature has placed them, happily on the globe: the one, on the advantageous coast of America; the other, near the commanding extremity of India: they both have commodious harbours, for

the king's navy, and the merchant's shipping: the one has soil; the other has spiceries: and, they both have great capabilities, which, according to the uses, that we make of them, by our attentions, and expence, will give them importance, and constitute their value. But, it is to peace, that we must look, for the compensation of our late expences, and for the comfort of our future hopes.

Our moderation has concurred with our policy, in reftoring Malta to its true owners. By placing it, prudently, in their hands, under a most powerful guarantee; we have counteracted the state, who was ambitious to possess it, by whatever title. In our hands, Malta had been an enormous expence, without any perceivable profit. Having Gibraltar, we did not want its position, or its port: its commerce would have partaken of the unimportance of the Levant trade, whether we regard our shipping, or our merchandize; a trade, which even with the grateful attentions of the Porte, can never be considerable, while it must be carried on, in war, athwart a long line of hostile coast, throughout the Mediterranean sea.

By wresting Egypt from the eager gripe of the enemy; by restoring that commodious country to its grateful sovereign; by stipulating for the entire preservation of the territorial rights of the Sublime Porte; by establishing the Republic of the Seven islands; we displayed to Europe the superiority of our arms, and the magnanimity of our conduct. We may, in those considerations, see how many ambitious projects

projects were disappointed: and, it is in those considerations, that we must look for some of our
equivalents. The fidelity of the Porte, the disadvantage of our opponent, and our own interest, dictated
those points of judicious management, which prudence must approve, and wisdom confirm.

The weakness of Naples, of Rome, and of Lisbon, demanded an attention, which induced our policy to stipulate, for the evacuation of their territories, and for the entirety of the possessions of Portugal. All Europe selt the weight of our interposition. We obtained much for doubtful friends, from the concession of an uncomplying soe. We must find our equivalent, in the consideration, that tomething has been taken from the scale of an opponent, and thrown into the balance of friends; that our sidelity is admired, while our power is respected.

Such are the outlines of our Preliminary Peace, which was conceived by wisdom, distated by policy, and concluded by address. These principles will continue to produce their falutary effects, after the tumult of applause, and the snarl of contestation have ceased.

On this contentious subject, I have seen in the PORCUPINE Newsspaper, some Letters, which were addressed to Lord Hawkesbury, by an ingenious sophister, who scribbles, triumphantly, by supposing what he ought to prove, and by proving what cannot be denied. He logically supposes, that the Secretary of State had been invested with the power of

ciate. Any man; the late Writer in the Porcupine, could make a very pregnant treaty, if there were placed in his hand the pen of prescription. By Dr. Wilson, who taught The Arte of Logike, it is aptly remarked:—

" Well may wee say, that Sophisters are " like those, which plac with false dice, and " would make others beleeve, that they are true."

France has acquired Flanders. She influences Holland. She has run out her limits to the Rhine. She dictates to Switzerland. She has annexed Savoy. She domineers over Italy. Now, it did not require the proofs of our fophister, to evince what cannot be denied.

His positions are all TRUISMS, which, like other truisms, do not apply to the question. Could war's alarms have altered the actual state of those several positions? No. Could any mode of negociation wheedle those positions from the greedy gripe of a persevering soe? No. Those positions, then, were not to be obtained, either by force, or artisce. And to deplore what cannot, by any possibility, be obtained, what is it, but childish tattle, womanish outcry, or sophistical declamation.

Yet, Lord Hawkesbury was outwitted, says the Tyrtæus of the newspapers. Now, the term is not to be found in any book of arithmetic. Any boy can work the rule of three, without being outwitted. But, neither our Sophister, nor our Tyrtæus, seems to understand moral arithmetic: and, they

would

would, therefore, be unfit negociators of any treaty; and are unqualified judges of our Preliminary Peace, now that it is made, by adequate calculators.

I have read, also, an oration, which seems to have been conceived with similar sophistry; and delivered with an analogous spirit.

The following assumptions are the Orator's pofitions:- "That France has now the power of destroying us, though perhaps not the inclination; "that we are under the paw of the lion, but that " he may happen not to be hungry; -that we capi-" tulate, while we have yet some ammunition left; " -that we are to all intents and purposes, concc quered; that our opponent may fay to us, we " can hold out, and you cannot; make peace, or we will ruin you; -we are, of course, a con-" quered people; -- Bonaparte is as much our master, " as he is of Spain, or Prussia, or any other of "the countries, which are completely in his power; " and finally, that we live henceforward by fuffer-" ance, from France." Now, what are those several positions, in logic, but what Dr. Wilfon, who was one of the Secretaries of State, during the homely days of Walfingham, and Burleigh, happily calls the cuckowes songe; or a repetitio principii, which attempts to prove one certainty, by repeating a dozen uncertainties: and, in fact, what are those positions, but fo many affirmations, which the orator himself does not expect any one to admit to be true. " I wish of God, adds the Doctor, that all ec our

" our reasoning might be sastened upon such mat" ters, as are necessary, both for the hearer to
" learne, and good for the reasoner to teach.
" In which matters, to move any earnest ques" tion, or to doubt overmuch in things no" thing doubtful, were rather starke madnesse, or
" els plaine soolishnesse." The Doctor, who was a
learned person of great experience, did not foresee, when he was teaching The Arte of Rhetorique,
that any future orator would open his declamation,
by avowing,—" that he was plunged in deep de" spair."

But, despair is not a very classical principle of action. The liberal youth of our island learn far other lessons from the Greek, and Roman, books, wherein they are schooled. The purchase of the ground, whereon the Carthaginians were encamped, at Rome, has been celebrated, by history, as an instructive example of magnanimity. We have, in our own annals, instances of similar fortitude; which according to Locke, "is the support of the other "virtues." When the Bishops, and Barons, or Scotland, after a long and unequal contest, wrote the Pope, "that while one of them remained, they "would not submit to Edward of England," they displayed

" --- The better fortitude

" Of patience, and heroick martyrdom."

Whether peace be preferable to war, is one of those truisms, which Mr. Secretary Wilson declares,

it were flarke madnesse to question. To persevere in war, upon mere speculation, is an astion of bleod-thirssyness, which Mr. Secretary Burleigh denounces with perdition. But, our orator, fairly, puts the question, "whether the Peace now proposed," be better, or not, than a continuation of hosti"lities?"

Confidering the war, as a mercantile project, I have already demonstrated, from the mathematicks, which cannot be outspoken by oratory, that our gains would be infinitely greater by the restoration of peace, than by the continuation of hostilities\*. This demonstration points to a truth, which obviously answers the oratorical question: it is the profits, arising from previous peace, and the accumulations, proceeding from prior tranquillity, which constitute the resources of subsequent war.

It has been the aim of the foregoing Estimate to recount the wailings of despair, at particular epochs of our history: at the peace of Ryswick; at the peace of Utrecht; at the peace of Aix-la-Chapelle; at the peace of Paris; and above all, when there was the greatest cause for lamentation, at the conclusion of the American war, in 1782. It required three years exertions to tie up the never-ending tail of that omened war. This length of labour may be said to have been finished, by the settlement of the sinking sund, in 1786. The question of our orator supposes, that we could have continued hostilities in 1782, with a greater probability of

<sup>\*</sup> See the Detail, in p. 361.

fuccess, than we could have renewed them, in 1786, or begun them in 1787, in 1788, in 1790, in 1791, or in 1792. Amidst bis despair, he forgets how prest we were, as BACON would speak, to unfurl our sails, in the intermediate period, when all bands were called, by the affairs of Holland, in 1787, of Sweden, in 1788, of Nootka, in 1790, and of Oczakow, in 1791.

The previous weaknesses of 1782, did not, then, prevent the animated exertions of those subsequent years. A nation, any more than a man, cannot make, during the debility of disease, the energetic efforts of persect health. But, who would argue with despair, or contend with "foolishness?"

How much we relinquished, at the conclusion of the American war, to France, to Holland, to Spain, and to The United States, may be seen in the national treaties. By the independence of the revolted colonies, three, or four millions of sellow subjects, were different from the British empire. But, we must recur to moral arithmetick, for calculations of our real losses, from those relinquishments. I have long thought, what I now think, that those Colonies, from the peace of 1763 to the epoch of their revolt, formed balances to to the power, rather than buttresses to the strength, of Great Britain. Experience has evinced, what Tucker had taught, that we should derive, from the independence of those colonies, all the advant

tages of their trade, without the vexations, and weaknesses, of their government. At the peace with them, we threw off a burden, and retained a benefit. By those relinquishments to Holland, to Spain, and to France, we were not prevented from performing fo many financial operations, in 1784, in 1785, and in 1786: by those relinguishments. we were not deterred from our foreign interpolitions, in 1787, 1788, 1790, and 1791; and, hiftory will record, that France fell back from the affairs of Holland in 1787; that Spain shrunk from the intrusion of Nootka in 1790; that Sweden felt our mediation, in 1783; and that Russia recollected our management, in 1791. Those intimations are fufficient to demonstrate to reason, though they cannot influence despair, that our resources, and strength, are, compleatly, within our selves.

Yet, alas! how feldom do ftatefmen recollect that exhilirating truth, in their prefent reasonings. If it be true, then, that our resources, and strength, lie in the People of the United Kingdom, what do we lose, by the several relinquishments of the Preliminary Treaty? Do we lose men? No. Do we lose money? No. Would they have been expensive establishments, during peace? Yes. Would they have been a still greater source of weakness, in war? Yes. As it has been our settled policy to subdue, during hostilities, the distant dominions of our foes; as it has been our common practice, arising from moral estimate, to return, by negociation,

gociation, what we had gained by valour; we have followed, in this preliminary treaty, the example of our fathers. If experience be the great inftructor of statesmen; if the greater relinquishments of the peace of 1783, did not prevent us from repulsing injury, and avenging wrongs, with prest alertness, in those subsequent years, the smaller relinquishments of the peace of 1801, will not prevent us from repulsing similar injuries, with readier alacrity, and obtaining redress, with more efficacious means.

Yet, is it urged, as an argument, for continuing hostilities, that France can fay to Britain:-" We " can hold out; but you cannot."-It is not easy, indeed, to estimate the resources, which consist of bankruptcy, and plunder. But, who would compare contrarieties together? bankruptcy with credit, plunder with honesty, idleness with industry, diffipation with thrift: and the argument is, that bankruptcy and plunder, idleness and distipation, can bold out; while credit and honefty, industry and thrift, can not. Had France demanded, as preliminary terms of peace, that the Isle of Wight should be ceded to her, Gibraltar to Spain, the Orknies to Holland, it would have foon appeared to the world, whether we could hold out; whether we be a conquered people, without refources, and spirit. In making conquests, and in baffling the enemy, we had borrowed money, at fimple interest, and paid our debts, at compound interest: now, on these data, science can demonstrate, that we could hold out. On such scientific B b 3

entific principles, we had as we have feen, an energetic finking fund, paying off our old debts, and a fecond finking fund, paying off our new debts, with greater energy. By means of the income tax, we had laid the foundation of a fund, for carrying on the war, without the aid of loans. But, the novelty of the measure, and the infelicity of feasons, had fomewhat retarded fruition, and in fome meafure disappointed hope. Notwithstanding all that I have read, heard, or feen, I am of opinion, that the income tax, would have yielded the vast sum, for which it was given, if it had spread wider over the country, if it had been rigidly exacted, and honestly paid: and above all, had the consumers been protected, by the same act of taxation, from the extortions of the suppliers. Such a tax, however, ought neither to be given, nor asked, but for defending the land we live in, and maintaining our religion, and laws. But, as it is constituted, and paid, its vexations, in peace, must produce its repeal.

Peace was not made, then, because we could not bold out. But, it was made; because peace is preferable to war, and war is more odious than necessity; because a war of speculation is absurd in its principle, and wicked in its means; because the experience of every peace, and every war, since the revolution, evinced, that our sickly land, after a little repose, and some solace, renews hostilities, with augmented energies; because the point of honour had been satisfied by the declaration of war; because

the object of the war, as far as it confifted, in repelling infult, defending our land, and maintaining our conflitution, had been completely obtained.

PEACE,

" Thou best of powers! who would not thee prefer

" To guilty glory, and the crimes of War!"

Yet, is it supposed, that we have, by those means, departed from our national dignity; and a feditious writer is quoted to prove the value of political punctilio, and the delicacy of female virtue; as if fuch points ought to stand opposed to the fafety of the country, and the folace of the people. Among the wonders of a wonderful period, an anti-jacobin orator quotes the jacobin Junius, to prove what no man will dispute, nor woman deny. After the very full detection of that writer, it might have been expected that, in a jacobinical age, fuch an authority would not have been quoted, either in the Senate, or the Forum. The proofs, which I took the liberty to lay before the public, in order to fatisfy every reasonable mind, that M'Auley Boyd wrote the letters of Junius, have not been contradicted. Evidence, indeed, was to be brought from India, to prove, that Rosenhagen wrote that jacobin paper: but, fuch evidence will not foon arrive! Rosenhagen, indeed, himself, claimed the honours of the authorship: but, with judicious persons, this personal claim is strong proof, that he never did what he would not have avowed. Rosenhagen received £.500 from Sir Thomas Rumbold, for de-B b 4 fending

fending him. I have compared his defences with Boyd's vindication of the pretentions of the Nabob of Arcot. Boyd has far more smartness and vigour, in his style, and infinitely more force and cogency, in his sentiment. As some persons, for whose opinion I have great respect, doubted the satisfactoriness of my proofs, I have made additional inquiries about Boyd, and his writings: and, I am now persectly certain, from intimations, which I have received from Madras, that M'Auley Boyd was the sedicious writer of Juntus's Letters.

It is not, indeed, the taxes of war, which debilitate, and vex the people! No: It is the defect of the tax-bills, which do not prevent the extortions of the suppliers of the articles taxed: a farthing tax is laid on a bottle of wine, and immediately a fixpence a bottle is extorted by the supplier; a trifle is imposed on the running of post-horses; and inflantly, the communications of the country are stopped by extertion: a trifle is imposed on the postage of letters, and this trifle only is added, because the postmen dare net extort; a trifle additional is laid upon paper, and the stationer's fortune is made, but literature is undone. Thus, the people, who are the resources of war, are delivered to the Extortioners, as the people of France, ere while, were put into the hands of the Financiers. From those intimations, then, we may trace the cause of the people's impatience for peace, and their readiness, after a little repose, to renew hostilities, with augmented energy. If, while I am shewing how that impatiEnce may be prevented, or mollified, the dostrine of Free Trade be quoted against me by oratory: then, have I done with the science of moral arithmetick.

When inculcating the ende of rhetorique, Dr. Wilfon requires three things of the orator, which he infifts, every orator is bound to perform;—to teach;—to perfwade;—to delight.—Our orator teaches, that despair is fortitude; that experience is foolishness; that victory is deseat; and that success and submission, are the same, in sense, and in sound. He perswades his auditory, that stern alarms are more charming than merry meetings; that ruin by peace is more certain, and speedy, than ruin by war; and that,—

- " PEACE fills the kingdom full of holy days;
- " And only feeds the wants of whores and beggars;
- " And makes the idle drunken rogues get spinsters :
- " By Heaven, it is the furfeit of all youth,
- " That makes the toughness, and the strength of nations
- " Melt into women. 'Tis an ease that breeds
- " Thieves, and baftards only:"-

And, knowing what pleasure most persons take, in being ruined, our orator delights, by inculcating, that "we are a conquered people;" that "France has the power of destroying us; and he delights, infinitely,

" by placing his hearers under the paw of the lion."—

BUT, PEACE IS MADE.

" — Fair Peace! How delightful thou! By whose wide tie, the kindred sons of men Like brothers live, in amity combin'd, And unsuspicious faith; while honest toil Gives every joy, and those joys a right,

Which idle, barbarous, rapine but usurps. Beneath thy calm, inspiring influence, Science his views enlarges, Art refines. And fwelling Commerce opens all her ports. Blest be the Man divine, who gives us Thee! Who bids the trumpet hush his horrid clang. Nor blow the giddy nations into rage; Who sheaths the murderous blade; the deadly gun Into the well-pil'd armory returns; And every vigour from the work of death To grateful Industry converting, makes The Country flourish, and the City smile. Unviolated, him the virgin fings; And him the fmiling mother to her train. Of him the shapherd, in the peaceful dale, Chaunts; and, the treasures of his labour sure. The husbandman, as at the plough, Or team, he toils. With him, the failor fooths, Beneath the trembling moon, the midnight wave; And the full city, warm, from fireet to fireet, And shop to shop, responsive, rings of him: Nor joys one land alone; his praise extends Far as the fun rolls the diffusive day; Far as the breeze can bear the gifts of Peace, 'Till all the happy nations catch the fong."

It is now the business of grave men to estimate the value of the Peace, and to give it effect. The American war dissevered from us, forever, three or four millions of people. The late war has been the means, under wife management, of uniting to us, forever, four millions of neighbouring subjects.

Ireland,

Ireland, till now, formed, like the revolted colonies, a balance to our power, rather than a support to our strength. United Ireland is of more real worth to Britain, than the conquered countries to France. How far our opponent will be ftrengthened by her extension, contrary to the order of nature, may well admit of a doubt: how far fo many people of fuch different lineages, and languages, will eafily coalesce, may admit of a greater doubt. Time, and chance, can only determine, whether Republican France will continue a mighty power, or fink into an unwieldy mass. One truth is certain, that the European continent will, finally, balance itself; while our Islands need not much care, for the balance of diffonant powers. Nor, has a twelvemonth passed away, since we stood, alone, fuccessfully, against the whole maritime attacks of the neighbouring continent. Hereafter, we have only, with our Henry IV .-

"—— In equal balance, juftly, to weigh What wrongs our arms may do; what wrongs we fuffer."

From experience, we know, that our people increase in numbers; from fact, that they increase, also, in knowledge, in industry, and in wealth; from detail, that they have now more shipping, and trassic; from record, that they have, with an enterprizing spirit, improved the surface of their islands, during the late war, beyond all example. All these comfortable truths, it has been the endeavour

of This Estimate, to demonstrate, by tracing their

progress, and inculcating their principles.

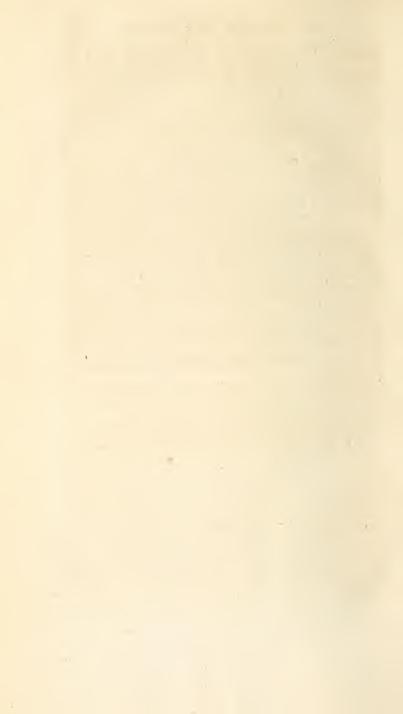

The American war left our finances in a state of uncommon disorder. It required, as we have seen, three years efforts of genius, of wisdom, and of perfeverance, to restore our financial health to a vigorous state. The American war left us, without a sinking sund: the late war has left us one sinking fund for the old debts of the state; a second, for the loans of the war, and a third, for redeeming collateral debts.

The effect, of all those means, upon our public securities, as sacts have evinced, has been, in proportion, to the powerful means, which were provided for augmenting their value. At present, one year of peace is altogether adequate, to the national end of restoring our financial affairs to their usual efficacy.

Before the late war began, it was doubted, by ingenious investigation, whether our shipping, and trade, would stand the several shocks of bank-ruptcy, and hostilities. Notwithstanding both those causes of deterioration, our commerce, and navigation, increased, during the war, beyond the example of former times. It will be equally doubted by political scepticism, whether our shipping, and trade, will continue, in peace, at their recent elevation. Experience inculcates, however, that what has invariably happened, at the end of sive long wars, since the Revolution, will again happen, at present.

present. Our commerce, and shipping, have always rebounded with uncommon energy, upon the return of every peace, after the conclusion of extended war. A detail has already evinced, that this exhilarating effect must necessarily follow the recent Pacification. We have now more enterprize, and knowledge, more correspondence, and capital, than energized the debility of former times. And, it is a point agreed, in commercial economy. that a rich, and industrious nation will always overpower, and disconcert, every people, who are indolent, from their infelicity, poor, from their indolence, and weak, from their fubordination. We are in possession of all the necessary ingredients of a vast commerce. And it is a maxim, which is founded upon observation, that trade will always find a port; but a port cannot always find trade. Why, then, should doubt embitter the enjoyments of the present!-

- " Britain, the queen of isles, our fair possession,
- " Secur'd by nature, laughs at foreign force:
- " Her Ships her bulwark, and the Sea her dyke;
- Sees Commerce in her lap, and braves the Worl!!"

#### GREGORY KING.

HIS ingenious, and modest man, was born on the 15th of December 1648, in the parish of Stow, at Litchfield; which was also the birth-place of Ashmole, and of the father of Camden. This curious computer was the son of Gregory King, and Elizabeth, his first wife, who was the daughter of Mr. J. Andrews of Sandwich, in Kent. This samily of Kings were originally of Leicester, where they had lived for generations, and long remained\*.

The father of our political arithmetician was himfelf a studier of the mathematics; and practised surveying of land, and dyalling, as a profession; but with more attention to good fellowship, than mathematical studies generally allow: and, the care of the samily devolved of course on the mother, who, if she had been less obscure, had emulated the most eminent of the Roman matrons. The sa-

\* Nichols's Leicest. vol. iii, pref. v.

ther, however, with all his laxity of company-keeping,
—was extremely attentive to the education of his
children\*.

With this parental ardour for literature, the father "packt away to school, at two years of age," his little Gregory to some matron old, who is "lost "in the dreary shades of dull obscurity." structed by her, who "knew unruly brats with "birch to tame," he read the pfalter, when three years old, and the bible at four, when he could fcarcely fpeak. While thus employed, he was feized with a paralytic complaint, which so affected his person, though not his intellect, that his father, fearing a perpetual deformity, often prayed, that God would take his fon to himself. He recovered, however, and while he was not fix years old, he was fent to the Free School, to learn his accidence. Mr. Thomas Bevans had the satisfaction of teaching this little genius Latin, Hebrew, and Greek. In his eleventh year, he learned rhetoric, while he himself taught children " to write, " and cast accounts." In his thirteenth year, he read Hesiod, and Homer; and while he was en-

gaged

<sup>\*</sup> Gregory King, the Herald, feems to have foreseen, with heraldic prescience, the danger of oblivion. And, he left behind him "Miscellaneous notes of his birth, education, and advancement," which have been published by Mr. W. Dallaway, in his Inquiries into the science of Heraldry, from a manuscript in the Bodleian Library. These Notes, which I have abridged, unfortunately end in 1694. I have tried to glean some additional notices, which continue the subsequent incidents of the useful life of Gregory King.

gaged in making Greek verses, he taught himsels "to survey land," while his father was more agreeably occupied with his good fellowship: yet, ought it not to be forgotten, that the father taught his son, as much at home, as the boy learned at school. At this period of his life, he gained money, and applause, by acting, in the Free School, the sool's part of Ropeny, in the pastoral comedy of Amyntas. He distinguished himself so much, in playing the fool, that this circumstance introduced him into life, while his more solid accomplishments of learning, as they were less seen, were passed over in neglect, and seem never to have contributed any thing to his fortune, or his same.

In December 1662, at the age of fourteen, our actor, who had attracted the notice of Dr. Hunter of Litchfield, was recommended, by him, as a clerk to Dugdale, whose labours have insured his immortality. In his service, and school, Gregory King was initiated in the knowledge of Heraldry, and Drawing;—and he taught himself French. He now attended this great antiquary, and herald, upon his respective visitations, during several years. It was, on those journeys, that he acquired the local knowledge, and the accuracy of mind, which enabled him, in after-times, to become one of the greatest masters of political arithmetic, during the intelligent age of Davenant, and Petry.

But, Dugdale's visitations being ended in 1667, this circumstance brought to a conclusion the fervices, and instructions of King. Dugdale, however,

recommended him to Lord Hatton, who, as an antiquary, wished for the assistance of an Archaiological Secretary. In this fituation, King continued to the year 1669, when Lord Hatton's passion, or pursuits, failing, he civilly dismissed his helper. King now returned to his native place, where he found his father married to a fecond wife. Here he continued a twelvemonth; teaching the youth to write, and cast accounts; and employing himself in painting, and in instructing inquisitive persons to read ancient writings. While he was thus occupied, he was still under age. King was now invited by Mr. Chetwynd, of Injestry, a gentleman of curious learning, to peruse his charters, to draw his seals, and to form his genealogy\*. King was at length known, as a person of various knowledge, and useful accomplishments: and he was invited by the dowager lady Gerard, to be her steward, auditor, and fecretary. With her ladyship, he remained at Sandon, in Staffordshire, acting in those several characters, and helping her ladyship, in drawing, and painting, till August 1672.

He at this epoch removed from Sandon to London, the proper scene, for genius to exert its powers, and talents to employ their faculties. He was, naturally, welcomed by his old master, Dugdale, who introduced him to the heralds, and to Hollar, the en-

<sup>\*</sup> In the 6th vol. of Leland's Itin. p, 96, there is a letter to Hern, dated the 16th May, 1711, which mentions this connection; but mistakes the name; calling King, Charles, instead of Gregory.

graver. But, King was still to be employed, in some profitable service, which might be analogous to his studies, and contributive to his livelihood. Such a person was wanted, by OGILBY, who was then occupied, under a patent, as Royal Cosmographer, in book-making and printing, in mapmaking and engraving, in road measuring and etching. To him, was King now recommended by Hollar; and, during some time, was our ingenions calculator employed, with Ogilby, in writing notes, in engraving feals, and in reducing sculps. A new Britannia was at length projected, by that noted projector: and, roads were now to be meafured, towns to be ichnographied, and shires to be surveyed. King attended Falgate, in making a furvey of his native county of Essex, in 1672; collecting notes out of churches, and copying records, for the hiftorical department. King was the first, who made a furvey of London upon a scale of a hundred feet to an inch, which expressed the ground-plot of every house and garden: this curious map of the metropolis was engraved by Hollar.

But, fuch undertakings required more capital, than Ogilby could command, and, in this diffress, he projected a lottery of books, which King ingeniously contrived, and honestly managed, for him: he also framed a lesser lottery of books, for Bristol sair, at St. James's tide, 1673, which turned to the good advantage of Ogilby, under the manage-

ment of King.

For all those helps, the Royal Cosmographer was C c 3 grateful,

grateful, although he was poor, and old. And Ogilby proposed to King to make, on his own account, a survey of Westminster, upon the same scale, as that of London. This great work, he undertook, in 1674, and performed, with the help of Falgate, in less than a twelvemonth. He was thus induced to six his lodging in St. James's-street, Covent-garden, at the house of Mrs. Ann Powel, a maiden gentlewoman, the daughter of Mr. J. Powel, of Tirley, Gloucestershire, who was of the Powels of Denbigh: and her he married, on the 20th of July, 1674, in the 26th year of his age.

Westminster was at length surveyed; and King now occupied himself with engraving maps of various countries, and geographical cards, which were composed by Sir Peter Wych, and first published by Broome, the bookfeller; and which were the prototypes of all the subsequent cards of that nature. King still continued, on different occasions, his original business of surveying land, and copying chartularies. He now surveyed Soho-fields, projected Sohofquare, and the adjacent streets, and drew up the articles, for erecting the buildings. In 1681, he copied, for the President of the Council, perhaps, the Privy Council Registers, during the interesting reign of Edward VI.\* He affifted Sandford, in drawing up his well-known genealogical history; compiling a part of the text, and preparing the whole for the press.

<sup>\*</sup> I have in my library this copy, in three folio volumes, finely written by King, with his name inscribed, as copyist, and splendidly bound, and ornamented, with an earl's coronet.

now

These occupations enabled King to renew his acquaintance with Lee, the Chefter herald, who introduced him to Mr. Andrew Hay, the fecretary to the Earl of Norwich, who then acted as Deputy Earl Marshal. In the dispute, which, at that time existed, between the jurisdiction of Walker, the garter king, and the authority of the Earl Marshal, King made himself useful to the higher power, and this usefulness made him Rouge Dragon, in 1677, upon the deaths of Walker, and Lee; being created on the 24th of June, in that year, at the College of Arms, by the Earl of Peterborough, the Deputy Earl Marshal. The death of Walker brought to the head of the College of Arms, Dug. DALE, who renewed his kindness to his old clerk, while he was yet inconfiderable, from the late loss of his friend Lee, and poor, from the smallness of his official emoluments. At Lady Day, 1680, King removed into the college, where he was nearer his proper affairs, and was better able to attend to the interests of himself, and his friends.

In 1681, 1682, and 1683, King was, chiefly, occupied, in making heraldic furveys of feveral shires, whereby he gained some money, but lost the kindness of Sir Henry St. George, the Clarenceux. This misfortune, however, as it was not owing to his fault, did not prevent his advancement. The death of the Duke of Norfolk brought his fon the Earl of Arundel into the high office of Earl Marshal. King's usefulness, and modesty, which had been noticed, by this eminent person, were CCA

now rewarded by him: and, King was on this occafion appointed registrar of the College of Arms, notwithstanding the objections of Sir Henry St. George; an office, that he had for some time executed, for the emoluments of Devenish, his predecessor. The enmity of Clarenceux did not prevent him, from asking King's company, and assistance, when he made his visitation of Cambridge, and Huntingdon, in 1684.

But, the time was at length come, when our Rouge Dragon was to be engaged in greater events. The demise of Charles II. penetrated the heart of King, who had been ftruck with the good humour, and accustomed grace of a prince, who had acquired those captivating arts in the school of instructive adversity. He bore a considerable part, in the suneral folemnity of that lamented fovereign; as he prepared the escocheons, by direction of Dugdale. And, he attended the proclaiming of James II., with fad dismay, and after thoughts disturbed, submitting to what seemed remediless. Our Rouge Dragon now prepared, by Dugdale's order, no doubt, "the ce-" remonials, and schemes," for the subsequent coronation. And, king James, declaring, that he would have the account of his coronation printed, Sandford, and Gregory King, were allowed by the Earl Marshal to execute the king's wish. The management, and execution, of this undertaking fell chiefly upon our Rouge Dragon; yet, he allowed Sandford's name to stand in the title-page; and referved only one-third of the profits to himfelf, without any of the honours. His prudence forefaw. that detraction would fasten on a work, which could not be made perfect. The two undertakers, merely, faved the expence of the book, amounting to f. 600: for, the fculps, being many, and tedious, the necessary time carried the hour of publication forward to the eve of another coronation. In 1687, our Rouge Dragon attended the visitation of London by defire of the Clarenceux, as he had before attended him on the visitations of Cambridge, and Huntingdon. King had long struggled with fortune. His bounty to his relations had absorbed all his favings, before his marriage. Ogilby had died indebted to him f. 200, in 1676. His marriage, however, laid a good foundation of future competence, though fruition was fomewhat retarded by his liberal manner of living. In 1687, he began, however, to lend money on houses. In 1688, he purchased land, in the parish of Holy Cross, Essex, of the value of f. 21. 15. a year. He foon after laid out f. 1,260, in purchasing a threeand-thirty years lease of fixty houses, in St. Catharines, the rental whereof amounted to f. 220 a year: yet, to accomplish this great adventure, he was obliged to borrow more than half the purchase money. And the taxes of king William's time running very high, and the rents falling, these two unlooked-for circumstances reduced a good bargain to little value. In 1688, his old affociate Sandford, who smarted from the suspension of the Earl Marshall, resigned to him his place of Lancaster Herald, which cost him a hundred and sixty pounds.

But, uncommon prospects again opened on his intelligent eyes. When he heard of the imprisonment of the seven bishops, he cried out: " Then, " farewell to popery in England;" forefeeing, that fuch violence must destroy itself. And, upon reading the Prince of Orange's declaration, he equally foretold, " that the prince came not without an ex-" pectation of the crown." Our herald pitied the misfortunes of king James, the more; as he was attached, with so many greater persons, in that age, to the hereditary descent of the crown. These sentiments, however, did not prevent him, from obeying the Earl Marshal's order, founded on the authority of the House of Lords, for proclaiming king William, and queen Mary. He afterwards proclaimed the order for the Court of Claims; affifted at feveral fittings of a committee of bishops, for drawing up the coronation fervice; and prepared four books for that ceremony; one for the king, one for the queen, one for the princess Anne, and one for the bithop of London; as he had recently done before the coronation of king James: and, he gave extraordinary affiftance, in forming the ceremonial of that extraordinary folemnity; and, upon the coronation day, he undertook the fatiguing talk of calling into order the peers, and peereffes, in the House of Lords, their majesties being present. Such were the parts, which our herald was destined

to act in that uncommon scene, wherein great knowledge of ceremony, and greater fortitude of mind, were requisite to just performance.

Our herald was at length to diftinguish himself as the interpreter of the wishes, and civilities of kings, and princes, to each other. The Elector of Brandenburgh was chosen knight of the garter, in January, 1689. And, Sir Thomas St. George, the garterking, declining, from his great age, the splendid task of carrying the order, our herald was prevailed on to accept that office, having Latin, and French, and other qualities sufficient. His coadjutor, in this commission, was the nephew of Burnet, the bishop of Salisbury, Johnston, who was afterwards fecretary of state in Scotland. The commisfion, the credential letter, the instructions were all drawn, and engroffed by our herald, and approved of by the chancellor of the order. The commiffioners fet out, in February; arrived at Berlin, in May; and after a diffinguished reception, they invested the elector with the order of the garter, accompanied by the accustomed splendour of such ceremonies; and they were rewarded with adequate munificence. Returning by Hamburgh, our herald was entertained, nobly, by Sir Paul Rycaut, and by the English merchants, who, in doing honour to the king's heraldic representative, on a fplendid embaffage, tried to do honour also to the nation. And, returning to London, in August, our herald concluded his negociation, by making the compliments of the electoral family to the queen,

and delivering to her majesty an amber cabinet from the electress.

The Duke of Zell was elected a knight of the garter, in the beginning of 1691: and the king, declaring that he would invest the Duke with his own hands, at the Hague, Sir Thomas St. George thought himself obliged to carry the ensigns; and was induced to invite our herald to accompany him, on an errand so profitable, and splendid. They arrived at the Hague, the day after king William had departed to endeavour to raise the siege of Mons. The magnificent ceremony of investing the Duke took place, on the 8th of May, in the presence of several English nobles of the highest rank. Rewarded, and gratified, the heralds returned to London, in June, when they concluded an extraordinary scene of illustrious action.

From this elevation, our herald descended into his youthful walks of land surveying. In July and August 1691, he performed what he had long promised to Jesus College, Cambridge, by surveying their lands in Oxford, Gloucester, and Glamorganthire. The wet, which he received, in performing this trust, brought on a sciatic, which greatly distressed him. This did not, however, hinder him from drawing up the claim of lady Essex Grissin to the barony of Audley of Waldon, as he had successfully supported the claim of Lord Thanet to the barony of Clissord, in the year before. He soon after conducted the installation of the Earl of Dorfet at Windsor. And owing to whatever cause,

his

his sciatic returned with such violence, as to deprive him, for a time, of the use of his limbs, and of his speech, and memory. This was the more diffressful, as the king fent orders, for carrying the garter to the Elector of Saxony. Sir Thomas St. George was then occupied with love, and marriage, at the ripe age of feventy-eight: and, he entreated our herald, while he was yet in a state of convalescence, to undertake that splendid, but satiguing embassage. Their majesties' resident at the courts of Lunenburgh, Sir William Colt, was joined in the commission with our herald, who drew up the commission, the credential letter, and instructions. Yet, the dispatch of these authorities was attended, with great delay, and the payment of the requisite money, with still greater. These envoys, at length, arrived at Drefden, where they had been long expected, on the 9th of January, 1693. It was now refolved to outdo the Elector of Brandenburgh, in magnificent expence, and munificent rewards. The grand ceremony was performed, on the 26th of January, with extraordinary splendour. Such caroufals, as were on this occasion, displayed, had seldom been feen. The two commissioners, as the custom was, dined with the Elector. And our herald, departing from Dresden, the scene of so many festivities, arrived at the Hague, where he delivered the Elector's compliments to the king, who allowed him to return to England, pleafed with his journey, and enriched with prefents.

Our herald was again occupied with his usual affairs,

fairs, till the 5th of June, 1694, when he conducted the instalment of several princes, and peers, at Windsor, with the gorgeous ceremonies of that unusual scene.

In the mean time, Sir John Dugdale proposed to resign his office of norroy to Mr. King: but, the Earl Marshal, owing to whatever cause, resused his consent to every importunity. The demise of Mary, on the 28th of December, 1694, giving rise to a contest between the master of the wardrobe and the Earl Marshal, our herald was involved in the contest of those mighty potentates. And, as the disgust of the Earl Marshal was, at length, raised to resentment, he soon after transferred the pen of registrar from Mr. King to Doctor Plott, who had been recently nominated Moubray herald extraordinary.

Our herald was, at length, destined, to act, in a very different sphere. The tendency of his genius led him to political arithmetic, in an age, when this science of statesmen was brought into repute by men of extraordinary powers. And, Gregory King produced his Political Conclusions, in 1696, though his modesty did not publish those curious efforts of art, and sagacity. He allowed Doctor Davenant, a well known writer of those times, to peruse, and to garble his political conclusions. This writer, when treating "of the use of political arithmetic," praises Gregory King, for his general knowledge of this science, and speaks of his "scheme of the inha-

"ever made, concerning the people of any other country\*. He avows his obligations to that wonderful genius," for many lights, and informations. He, indeed, made great use of those observations, by publishing mutilated extracts from a consistent whole. The observations, and conclusions, of Gregory King, are now published, at length, for the first time. His original genius, his local knowledge, his scientific practice, qualified him, in a high degree, to carry this practical science of public business far beyond Sir William Petty, the original inventor of the art.

From the publications of Davenant, it had been apparent, if there were not other evidence, that Gregory King was of a very communicative disposition. By means of Stepney, who is still remembered, as a negociator, and a poet, he laid before the Board of Trade, in September, 1696, "a "scheme of the inhabitants of the city of Gloucester." This scheme is now subjoined to the political conclusions of Gregory King, as a proper supplement. To this paper, I have added, for the useful purpose of contrast, the numbers of houses, of the males and semales, and of the souls, in the same city, at present.

We may eafily suppose, that King became acquainted with Stepney, while they were both so

<sup>\*</sup> Dav. Discourses on the Pub. Rev. and Trade, 1698, p. 17.

frequently

frequently employed, as envoys to foreign courts; the one for matters of ceremony, the other, for points of bufiness. While the Board of Trade were occupied with the difficult, and important, concerns of the Poor, Stepney communicated to them, King's computation of the endowed hospitals, and alms-houses, in England. This was received, on the 27th of September, 1697, by the Board, who " ordered it to be copied for use, as occasion may ferve \*." This paper, I have now subjoined, as a fecond supplement to King's political conclusions: while the poor continue to be objects of our care, this computation of fuch an arithmetician will always have its value. Thus ufeful was Gregory King, in his life; and thus ufefully are his labours brought into political consideration, at present.

The gratitude of Davenant spoke of Gregory King, as a jewel, which was fit, for any statesman's cabinet. This friendly intimation seems not to have been quite disregarded. The expenditure of the wars of William, and of Anne, required, that the public accounts should be stated. An annual act seems to have passed, during the first reign, for that important end, from 1692†. This salutary measure was continued, at the commencement of the

<sup>\*</sup> The Board's Journal, B. 279.

<sup>† 4-5.</sup> W. and M. ch. 11.; 5-6. W. and M. ch. 23.; 6-7. W. and M. ch. 23.; 6-7. W. ch. 7; 7-8. W. ch. 8. for flating the public accounts of the kingdom.

fecond of those hostile reigns\*. Gregory King acted, as secretary to the comptrollers of army accounts; he continued, as the secretary of the commissioners for stating the public accounts, to the hour of his death †. From the tendency of his genius, from the course of his life, from the nature of his employments; we may perceive how qualified he was to estimate the state of the nation.

In the midst of all those employments, Gregory King had often reason to think that, "the world is "full of rubs." The weight of Sir John Vanburgh rubbed against his feelings, in 1709. It was then in contemplation to bring Sir John into the patent of Clarenceux, though he was a stranger, in the college of heralds. On the 10th of January, 1710, King wrote to Mr. Harley, to whom he was known; remonstrating against a meafure, which was ruinous to the college, and injurious to himfelf: he flated to the minister, his " be-" ing bred up from a youth under Sir William "Dugdale;" his employment, for twenty years under the garter king, whose sworn deputy he long had been: he urged " the differvice to the public, " to have the heads of a fociety ignorant in its fa-

<sup>\* 1</sup> An. ch. 10.

<sup>†</sup> His Epitaph, on the 17th of March, 1711-12, Gregory King, from the commissioners for stating the public accounts, laid before the House of Lords, the receipts and issues of the exchequer, from Michaelmas 1710, to do. 1711. Lord's Journ. of that date.

" culty, and a coadjutor himself to want a coad" jutor\*." Vanburgh's wit, I fear, prevailed over
King's arithmetick.

Gregory King did not long furvive that mortification, which facrificed propriety to influence, and fubstituted ignorance for knowledge. He died, on the 29th of August, 1712, when he had passed his grand climacteric; and was buried in the chancel of St. Bennet's, Paul's Wharf, on the 3d of September, by the fide of the wife of his youth +. He was twice married; first, to Anne Powel, as we have feen: and fecondly in February, 1701, to Frances Graham, the fifter of William Graham. He had one fon, Thomas, and two daughters, Elizabeth, and Frances, who all died, before their father, under age. He made his will, on the 30th of November, 1709; to which he added two codicils; whereby he constituted his wife his sole executrix, who raised, as she was directed by his will, a monument to his memory, which will be longer preserved by his political conclusions. He left her in easy circumstances; and he bequeathed many legacies to his relations, to whom he was always kindt; and to his friends, to whom he was ever obliging.

Gregory

<sup>\*</sup> The original letter is in the British Museum. Harl. No. 7.525.

<sup>†</sup> Parish Register. His monumental inscription, is in Le Neve, p. 243; and in Dallaway, wherein the name of his second wife is blundered.

<sup>1</sup> He mentioned his brother, John King, "long fince [1709] deccased," and his brother Thomas King, " of the Excise Of-

Gregory King was obvioufly an accomplished person: he wrote a beautiful hand\*; and he practifed drawing, skilfully. From nature, he had very vigorous faculties; quickness of apprehension, and strength of fagacity: from education, and habit, he possessed steady application to whatever employment; and dextrous facility, in whatever affairs: and he was a person of such powers, as to distinguish him, in an age, when eminent men, in his feveral accomplishments, abounded. He who furpassed Petry, as a political calculator, must be allowed to have been a master of moral arithmetick. As a Herald, King is ranked next, in knowledge, to GLOVER, who is deemed the first; and was the instructor of CAMDEN. His whole life furnishes an example how a man of talents, and address, may furmount every difficulty, and raise himself from poverty, and infignificance, to competence, and distinction.

fice, London:" but, the particularity of his will does not mention any brother, or any children of any brother, of the name of Charles King.

\* His autograph is in Dallaway's Heraldry, pl. xv. facing p. 221: but, I know not, if there be any picture of him.

# NATURAL AND POLITICAL OBSERVATIONS

AND

CONCLUSIONS

UPON THE

STATE AND CONDITION

OF

ENGLAND,

1696;

BY

GREGORY KING, ESQ. LANCASTER H.

### THE PREFACE.

IF, to be well apprized of the true state, and condition of a nation, especially in the two main articles, of its people, and wealth, be a piece of political knowledge, of all others, and at all times, the most useful and necessary; then, surely, at a time when a long and very expensive war against a potent Monarch, (who, alone, has stood the shock of an alliance and confederacy of the greatest part of Christendom), seems to be at its criss; such a knowledge of our own nation must be of the highest concern: but, since the attaining thereof (how necessary and desirable soever) is next to impossible, we must content ourselves with such near approaches to it, as the grounds, we have to go upon, will enable us to make.

However, if having better foundations than here-tofore, for calculations of this kind, we have been enabled to come very near the truth; then, doubtlefs, the following observations and conclusions will be acceptable to those, who have not entirely given up themselves to an implicit belief of popular falsehoods. But, the vanity of people, in overvaluing their own strength, is so natural to all nations, as well as ours, that, as it has influenced all former calculations of this kind, both at home and abroad, so if these, even these papers may be allowed not to have erred on that hand, I am of opinion they will not be found to have erred on the other.

# THE CONTENTS.

		-
§ I.	THE Number of People in England and Wales, calculated from the Assessments on Marriages, Births, and Burials	
§ II.	The Proportion of England, in Acres, and People, to France, and Holland, to Europe, and to the World in general; with a Calculation of the Number of People now in the World	d z
§ III.	The several Distinctions of People, as to Males, and Females married, and unmarried, Children, Servants, and So journers	
§ IV.	The several Ages of the People -	- 416
§ V.	The Origination, and Increase of the People of England, with some Observations about Procreation -	6 - 417
§ VI.	The Annual Income, and Expence, of the Nation, A° 1688 with a Scheme of the Income, and Expence, of the severa Families respectively; and a Calculation of the Quantity of Silver and Gold, in England, France, and Hollaud, is Europe, and in the World in general, and of the Increase and Consumption thereof	f n
VII.	The several Sorts of Land in England, and the Value, and Product thereof; with a Scheme of the Live Stock of th Nation, in Cattle, &c. &c. of the Flesh yearly consumed a Food	$\epsilon$
VIII.	The Beer, Ale, and Malt annually confumed in England, and the Revenue of Excise arising thereby	d - 431
§ IX.	A Calculation of the Produce of the Poll Bills, and some othe Taxes, viz. The Tax on Marriages, Births, and Burials and on Houses and Windows; and what may be raised o some Commodities not yet taxed	ر)
§ X.	The State of the Nation, A° 1695, and what may be the Ef feEt of continning the War to 1698 inclusive -	- - 437
§ XI.	The State of France, and Holland, in 1688, and 1695	- 439
y XII.	The State and Condition of the Three Nations of, England France, and Holland, compared one with another, with respect to the Years 1688, and 1695	7, b - 443
XIII.	The Expence of the Three Nations proportioned for the Year 1688 and 1695	·s - 445

#### 1696.

\$ I. WHEREAS the enfuing Treatife depends, chiefly, upon the knowledge of the true NUMBER OF PEOPLE IN ENGLAND, and fuch other circumstances relating thereunto, as have been collected from the affeisments on MARRIAGES, BIRTHS, and BURIALS, PARISH REGISTERS, and other PUBLIC ACCOUNTS: We shall, first, exhibit the calculation of the number of people, as they appear by the said affeisments.

Ift. Asto the Number of the People of England.

In this calculation we shall consider,

- 1. The number of inhabited houses;
- 2. The number of people to each house;
- 3. The number of transitory people, and vagrants.

The number of houses in the kingdom, as charged, in the books of the hearth office, at Lady-day, 1690, were - - - - 1,319,215.

The kingdom increasing at this time about 9,000 people per annum, as will appear in the ensuing discourse, the increase of houses should be about 2,000 per annum; but, by reason of the present war with France, not much above 1,000 per annum: so that by the year 1695, the increase cannot have been above 6 or 7000, which makes the present number of houses; that is to say, such as were so charged, in the books of the hearth-office, to be about - - - - 1,326,000.

But, whereas the chimney money being charged on the tenant or inhabitant, the divided houses stand as so many distinct dwellings, in the accounts of the said hearth-office; and whereas the empty houses, smiths thops, &c. are included in the said account; all which may very well amount to 1 in 36 or 37, (or near 3 per cent.) which, in the whole, may be about 36,000 houses; it follows, that the true number of inhabited houses in England is not above - - - - 1,290,000.

Which, however, in a round number, we \[ \] 1,300,000

#### And shall thus apportion:

London and the Bills of Mortality, - 105,000
The other cities and market towns, - 195,000
The villages and hamlets, - - 1,000,000
In all 1,300,000

Having thus adjusted the number of Inhabited houses, we come to proportion the number of souls to each house, according to what we have observed from the said affessments or marriages, births and burials, in several parts of the kingdom:—viz.

That London, within the walls, produced at a medium, almost	$5\frac{1}{2}$ fouls per house.
The 16 parishes without the walls, full  And the rest of the said bills, almost	4½ fouls per house. 4½ fouls per house.
That the other cities and market towns produced at a medium  And the villages and hamlets at a medium about	4 fouls per house.
Accordingly the number of people computed from the faid affeilments, amounts to	5,318,100 fouls.

#### As by the following scheme:

	Iuhabited Houfes.		Souls pe Houfe.		Number of Souls:
The 97 parishes within the walls,	13,500		5.4		72,900
The 16 parishes without the walls,		at	4. 6		149,500
The 15 out parishes in Middle- fex and Surry	35,000	at	4.4	-	154,000
The 7 parishes in the city and liberty of Westminster		at	4.3	-	103,200
So London and the Bills of Mor-	105,000				479,600
The other cities and market towns	, 195,000	at	4. 3	-00	838,500
The villages and hamlets -	1,000,000			- 4	,000,000
In all	1,300,000	at	4.	- 5	;,318,100

But, confidering that the omiffions, in the faid affeffments, may well be,

```
In London and the Bills of Mortality, 10 per cent. or 47,960 fouls, In the cities and towns, - 2 per cent. or 16,500 fouls, In the villages and hamlets - 1 per cent. or 40,000 fouls, In all 104,460 fouls,
```

it follows, that the true number of people, dwelling in the 1,300,000 inhabited houses, should be 5,422,560 fouls,

#### According to the following Scheme:

People Omiffions Number by the in the of People Affeffments. Affeffments. in all.

```
The 97 Parishes - 72,900 - 7,290 - 80,190 at almost - 6 Heads por House.

The 16 Parishes - 149,500 - 14,950 - 164,450 at above - 5 Heads per House.

The 15 Parishes - 154,000 - 15,400 - 169,400 at above 4. 8 Heads per House.

The 7 Parishes - 103,200 - 10,320 - 113,520 at almost - 4\frac{1}{4} Heads per House.
```

```
The Bills of Mortality - 3 479,600 - 47,960 - 527,560 at above - 5 Heads per House.

The Cities and Towns - - 3 838,500 - 16,500 - 835,000 at almost 4. 4 Heads per House.

The Villages - 4,000,000 - 40,000 4,040,000 at - - 4. 4 Heads per House.
```

Total - 5,318,100 104,460 5,422,560 at above 4. 17 Heads per House.

Laftly.—Whereas the number of transitory people, as seamen, and soldiers, may be accounted 140,000, whereof near one-half, or 60,000, have no place in the said affessments; and that the number of vagrants, viz. hawkers, pedlars, crate carriers, gipsies, thieves, and beggars, may be reckoned 30,000, whereof above one-half, or 20,000, may not be taken notice of, in the said affessments, making in all 80,000;—

It follows, that the whole number of the people of England is much about - - - - - 5,500,000:

Viz. London and the Bills of Mortality,
The other cities and market towns,
The villages and hamlets,

In all

530,000 fouls;
870,000 fouls;
4,100,000 fouls;

§ II.—THE PROPORTION OF ENGLAND, in ACRES, and PEOPLE, to FRANCE, and HOLLAND, to EUROPE, and to the World in general; with a Calculation of the Number of People now in the World.

That ENGLAND is in proportion

```
To the Globe of the Earth and Seas, as

To the known habitable world, as

To Europe (including Muscovy), as

To France, as

To Holland, as

To France, and Holland, together, as

In Acres.

In Souls.

In Souls.

In Acres.

In Couls.

In Acres.

In Acres.

In Couls.

In Acres.

In Couls.

In Couls.

In Acres.

In to 130

In Couls.

In to 130
```

That England having but 7 Acres of Land to each Head;

It is between 5 and 6 times better peopled than the known world in general,

Above

Above twice, but not three times better peopled than Europe in general.

About 11 times better peopled than Germany.

Above 3 times better peopled than Ireland now is.

Almost 3 times better peopled than Scotland, or Spain.

Somewhat better peopled than France, that kingdom having at least of acres per head, as Italy likewise hath.

About as well peopled as the Spanish Netherlands now are, or as the countries about the Rhine, viz. Alfatia, the Palatinate, Lorrain, &c.

And exceeded only, in populoufness, by Holland, and China, of all the nations in the world.

That England hath 5 times the number of people, now in Scotland, and 6 times the number of people, now in Ireland.

That Scotland, and Ireland, together are near equal to England in number of acres, but not 2th of England in number of people.

That England, Scotland, and Ireland together, contain about 75 million of acres.

Somewhat more than 7 millions of people.

Somewhat above 10 acres to each head.

About the 23d part of Europe in acres, and the 13th, and 14th, part of Europe in people.

Somewhat more than half France in acres, and people.

Nine times the bigness of the 7 provinces of Holland in acres.

And more than 3 times, but not near 4 times the people of those provinces.

And, in proportion to France, and Holland together, as 10 to nineteen in acres, and as 10 to 22 in people.

As to the Number of People Now in the World.

#### We are to consider,

1st, The Number of Acres in the habitable world.

2d, The Proportion of People to the number of acres.

#### As to the number of acres;—

1. The superficial content of the globe of earth and water, at 69½ miles to a degree of latitude, is 200 millions of square miles, or 128,000 millions of acres, at 640 acres to a square mile.

2. The land, discovered and undiscovered, is now generally prefumed to be one moiety of the globe, or 64,000 millions of acres.

70	The known part of the world	COI	ntains	about	23,000	millions of acres.
	And the unknown part -					

4. That of the known part of the world, - 20,000 millions of acres is habitable.

And - - - - - - 3,000 millions uninhabitable.

5. That of the unknown part - - - z5,000 millions of acres may be habitable.

### As to the Proportion of People to the Number of Acres;—

- I. That where there is more than 100 acres to each head, such country is little better than defert.
- 2. That there is no country, besides Holland, and China, so populous as to have but 4 acres per head.
- 3. That England, having about 7 acres per head, France about 9, and Scotland and Ireland together about 18 or 20 acres per head, we cannot suppose Europe in general has above 15 or 20 acres per head.
- 4. That Afia, being generally very rich, and populous, especially India, Persia, and China (which last is said to have 10 millions of large families, containing 59 millions of men, besides women and children, whereby the number of souls in China should be at least 230 millions for 1,000 millions of acres), we cannot suppose but Asia must be near as well, if not better peopled pro rata than Europe.
- 5. That, allowing Europe and Asia to be about 3 times better peopled pro rata than Asiaca, and 6-times better peopled pro rata than America, it follows, that the number of people in the known part of the world should be about 600 millions of fouls; and in the unknown part above 100 millions.—In all, 700 millions of souls.

Acres.

Europe - 1700 millions, at 17 acres per head - 100 millions.

Afia - - 6,800 millions, at 20 acres per head - 340 millions.

Africa - 6,100 millions, at 64 acres per head - 95 millions.

America - 8,400 millions, at 129 acres per head - 65 millions.

In all - 23,000 millions, at 38 acres per head - 600 millions.

# § III.—THE feveral Distinctions of the People, as to Males and Females, Married and Unmarried, Children, Servants, and Sojourners.

THAT the 5 millions and a half of fouls, in England, including the transitory people, and vagrants, appear, by the affeilments on marriages, births, and burials, to bear the following proportions, in relation to males, and females; viz.

```
Males. Females. Males. Females. Both.

In London and the Bills of Mortality 10 to 13 230,000 300,000 530,000

In the other Cities and Market Towns 8 to 9 410,000 460,000 870,000

In the Villages and Hamlets - 100 to 99 2,060,000 2,040,000 4,100,000

27 to 28 2,700,000 2,800,000 5,500,000
```

That, as to other distinctions, they appear, by the faid assessments, to bear these proportions:—

	People.	Males.	Females-
Husbands and Wives, - at above 341 per Cent.	1,900,008	950,000	950,000
Widowers, at above 11 per Cent.	90,000	90,000	
Widows, at almost $4\frac{1}{2}$ per Cent.	240,000		- 240,000
Children, at above 45 per Cent.	2,500,000	1,300,000	1,200,000
Servants, at almost 10 per Cent.	560,000	250,000	300,000
Sojourners and fingle Perfons - 4 per Cent.	210,000	100,000	110,000
100	5,500,000	2,700,000	2,800,000

And, that the different proportions, in each of the faid articles, between London, the great towns, and the villages, may the better appear, we have exhibited the following fcheme:—

	London a			er Cities Towns.			ges and ets.
Husbands and }	37 per Ct.	196,100	36 per Ct.	313,200	34	per Ct.	1,394,000
Widowers	2 per Ct.	10,600	2 per Ct.	17,400	I	per Ct.	61,500
Widows	7 per Ct.	37,100	6 per Ct.	\$2,200	42	per Ct.	184,500
Children	33 per Ct.	174,900	40 per Ct.	348,000	47	per Ct.	1,927,000
Servants	13 per Ct.	68,900	11 per Ct.	95,700	10	per Ct.	410,000
Sojourners, &c.	8 per Ct.	42,400	5 per Ct.	43,500	3	per Ct.	123,000
1	100	530,000	100	870,000	100		4,100,000

#### § IV .- The feveral Ages of the PEOPLE.

That the Yearly Births of the Kingdom being 190,000 Souls;

		In all.	Males.	Females.
Those under 1 year old -	- are	170,000	- 90,000	- 80,000
Those under 5 years old			- 415,000	
Those under 10 years old	- are	1,520,000	- 764,000	- 756,000
Those under 16 years old	- are	2,240,000	1,122,000	- 1,118,000
PTI C 1	-	. (	•	
Those above 16 years old			1,578,000	
Those above 21 years old			1,300,000	
Those above 25 years old			1,150,000	1,250,000
Those above 60 years old				- 330,000
So that the number of con	nmunic	ants is, in a	11 3,20	50,000 fouls.
And the number of fighting	g men	, between 1	6 and 60, is	1,310,000
That the batchelors -		are about	28 per cent.	of the whole.
Whereof those under And those above 25 y				
That the maidens				
Whereof those under			are 2	- 1
And those above 25 y	ears -		are	2 per cent

That the males and females, in the kingdom in general, are aged, one with another,  $27\frac{1}{2}$  years.

That in the kingdom in general, there is near as many people living under 20 years of age, as there is above 20. Whereof one half of the males is under 19 years, and one half of the females is under 21 years.

#### At a Medium,

That the Husbands are	aged 43	Years a	piece,	which	, at	17 <sup>‡</sup> pe	r Cer	at.	mak	es 742

### § V.—THE ORIGINATION, and INCREASE, of the People of England.

THAT, if the world was re-peopled, from 8 persons, after the Flood, and that England was peopled originally by two persons, or by a number not exceeding 20 persons, such first peopleing was about the year of the world 2200, or 2300, viz. 600 years after the Flood; and 16 or 1700 years, before the birth of our Saviour; at which time the world had between one and two millions of people only.

But, if the first peopleing of England was by a colony or colonies, confisting of a number between 100 and 1000 people (which is most probable), such colony or colonies were brought over between the year of the world 2400 and 2600; viz. about 8 or 900 years, after the Flood, and 14 or 1500 years, before the birth of our Saviour; at which time the world had about a million of families, and 4 or 5 millions of people.

From which hypothesis it will follow by an orderly series of increase;—

That, when the Romans invaded England, 53 years, before our Saviour's time, the kingdom had about 360,000 people; and, at our Saviour's birth, about 400,000 people;

That, at the Norman Conquest, Anno Christi 1066, the kingdom had somewhat above two millions of people;

That, Anno 1260, or about 200 years after the Norman Conquest, the kingdom had 2,750,000 people, or half the present number; so that the people of England have doubled in about 435 years last past;

That in probability the next doubling of the people of England will be in about 600 years to come, or by the year of our Lord 2300; at which time it will have eleven millions of people; but, that the next doubling after that, will not be (in all probability) in less than 12 or 1300 years more, or by the year of our Lord 3500 or 3600; at which time the kingdom will have 22 millions of fouls, or four times its present number, in case the world should last so long,

Now, the kingdom containing but 39 millions of acres, it will then have less than two acres to each head, and consequently will not then be capable of any further increase.

That the increase of the kingdom, for every 100 years of the last preceding term of doubling, and the subsequent term of doubling, has been, and in all probability will be, according to the following scheme:

Anno Christi.				Number of People.				crease every
1300	-		-	2,860,000	1964	-	-	440,000
1400	-	-	-	3,300,000	-	-	-	540.000
1500	-	-	-	3,840,000	-	-	-	780,000
1600	**	-		4,620,000	-	-	•	880,000
1700	œ	-	-	5,500,000	-	-	cos	920,000
1800	besi	-	-	6,420,000	-	-	-	930,000
1900	-	-	-	7,350,000	-	-	-	930,000
2000	**	-	-	8,280,000	-	-		925,000
2100	-	-	-	9,205,000		-	-	910,000
2200	-	-	-	10,115,000	-	-	-	885,000
2300	-	-	-	11,000,000	-	-	-	

Whereby it appears, that the increase of the kingdom being 880,000 people, in the iait 100 years, and 920,000 in the next succeeding 100 years, the annual increase at this time is about 9,000 souls per annum.

But, whereas the yearly burials of the kingdom are about 1 in 32, or 170,000 fouls; and the yearly births 1 in 28, or 190,000 fouls, Whereby the yearly increase should be - 20,000 fouls;—

#### It is to be noted,

1. That the allowance for plagues and great mortalities comes to, at a medium	4,000 per ann.
2. Foreign or civil wars, at a medium,	
3. The fea, constantly employing about 40,000, precipitates the death of about }	2,500 per ann.

In all 11,000 per ann.
Whereby the neat annual increase is but - - - 9,000

In all 20,000.

That of these 20,000 souls, which would be the annual increase of the kingdom by procreation, were it not for the fore-mentioned abatements.

The country increases annually by procreation - 20,000 souls;
The cities and towns (exclusive of London,) - 2,000 souls;
But London and the Bills of Mortality decrease annually 2,000 souls.

So that London requires a fupply of 2,000 annually to keep it from decreasing, besides a further supply of about 3,000 per annum for its increase at this time: In all 5,000, or a moiety of the kingdom's neat increase.

That, allowing London and the Bills of Mortality to have contained, in Julius Cæsar's time, between 4 and 5.000 souls; and at the Norman Conquest about 24,000 souls, and at this time about 530,000 souls; the increase thereof hath been, and in all probability will be, according to the following scheme of the duplication of its inhabitants.

Number of Souls.					Anno Christi.			W	hich	er of Years in the People of n have doubled.
					CHI III.			L	MIGO	II Have doubled.
8,280	-	-	-		330	-	-	-	-	
16,560	-	-	-	-	83 <b>0</b>	-		-	-	500
33,120	-	-	***	-	1,230	-	-	-		400
66,240	-	-	-	-	1,500	-	-	-	-	270
132,480	-	-	-	40	1,585	~	-	-	-	85
264,960	-	-	-	-	1,621	-	-	-		36
529,920	-	-	-	•	1,695	-	-	-		74
,059,840	-	-	-	-	1,900		**	-	-	205
,119,680	-	-	-	-	3,000	-	cia	-		1,100

Whereby it appears, that London has doubled 3 times fince the year 1500; fo that it is now 8 times as big as it was then; and the prefent yearly increase of London and the Bills of Mortality, would have been (had it not been for the present war) 3000 souls per annum.

But in relation to the prefent war, we are to confider,

That if the nation do at this time contain - - - 5,500,000 fouls, It did contain, anno 1688, about 50,000 more, or 5,550,000 fouls.

out of the yearly increase by procreation of 20,000; the said decrease has been at a midium 19,000 per annum: In all for 7 years	of (	133,000
And that, instead of an increase of 20,000 per annuby procreation, the said increase has been at medium but 12,000 per annum: In all for years	a (	84,000
So that the kingdom has decreased, in a years		10.000-

For that instead of a decrease of II ooo per appum.

People.

## Observations about Procreation, accounting the People to be 5,500,000 Souls.

By the fore-mentioned affeffments on marriages, births, and burials, and the collector's returns thereupon, and by the parish registers; it appears, that the proportion of marriages, births, and burials, is, according to the following scheme,

Annual Marriages:

530,000 London and Bills of Mortality - r in 106. In all 5,000;	producing 4 Childn each.
870,000 The Cities and z in 128. In all 6,800;	producing 4. 5 Childn each.
4,100,000 The Villages and I in 141. In all 29,200;	producing 4.8 Childneach.
5,500,000 1 in 134 - 41,000	4.64
Annual Births.	Annual Burials.
London and Bills of Mortality I in 261. In all 20,000	1 in 14. 1. In all 22,000
The Cities and Market Towns 1 in 28 1. In all 30,600	1 in 30. 4. In all 28,600
The Villages and Hamlets - 1 in 29.4. In all 139,400	
7 in 28.85 100.000	I in 22, 25 170,000

### Whence we may observe, that in 1000 co-existing persons,

There are 71 or 72 marriages in the country, producing 34. 3 children.
78 marriages in towns, - producing 35. 2 children.
94 marriages in London - producing 37. 6 children.

#### Whereby it follows,

- 1. That though each marriage in London produceth fewer people than in the country, yet London, in general, having a greater proportion of breeders, is more prolific than the other great towns; and the great towns are more prolific than the country.
- 2. That if the people of London, of all ages, were as long lived as those in the country, London would increase in people much faster, pro rata than the country.
- 3. That the reason why each marriage in London produces fewer children than the country marriages, seems to be,
  - 1. From the more frequent fornications and adulteries.
  - 2. From a greater luxury and intemperance;
    3. From a greater intenfeness to business;
  - 4. From the unhealthfulness of the coal smoke;
  - 5. From a greater inequality of age between the husbands and wives.

And, that it may appear what the effect is, of the inequality of ages in Married Couples, I have collected the following Observations, from a certain great town \* in the middle of the kingdom, consisting of near 3000 souls.

- 1. That there is no child of any parents, now living, in the said town, where the wife is 17 years older than the husband, or the husband 19 years older than the wife.
- 2. That the whole number of children being 1,060, the number of those where the mother was older than the father is 228, and where the husband was older than the wife, 832.
- 3. That one moiety of the whole number of children, in the faid town, is the product of such parents, where the husband is 4 or more years older than the wife.
- 4. That the greater number of children, with respect to any one number of years of difference in age between the husband and wife, is, where the husband is two years older than the wife, the product whereof is 147, or a 7th part of the whole.
- 5. That an equality in age, in the husband and wife, is not so prolific as an inequality, provided that inequality exceed not a superiority of 4 years in the wife, or 10 years in the husband; for the equality of years produced but 23 children; whereas one year's inequality in the age of the parents, either way, produced above 60.
- 6. That of the said 1,060 children, in the whole town, near three quarters of them are the product of coalitions from 2 years superiority of age in the wise inclusive, to 6 years superiority of age in the husband, inclusive.
- 7. That the highest powers in men and women, for procreation, is, in that town, at 31 years of age in the husband, and 28 in the wife; the produce of the former being 86 children, and of the latter 83.

<sup>\*</sup> Litchfield.

8. That one moiety of the faid 1,060 children are the product of fathers from 28 to 35 years of age inclusive, and of mothers from 25, to 32.

Whence it follows, that a just equality, or too great an inequality of age, in marriages, are prejudicial to the increase of mankind; and that the early or late marriages, in men and women, do tend little to the propagation of the human race.

Lastly, from a consideration of the male and female children in the said town, and the ages of their parents, at the time, when such children were respectively conceived, a scheme may be established, of the powers of generation, and the inclination of the several coalitions towards the producing the one or the other sex, according to the superiority of power in either sex, at the time of such respective coalitions.

### § VI.—THE Annual Income, and Expence, of the Nation, as it flood Anno 1688.

Nation, as it itood Anno 1000.
THAT the yearly INCOME of the Nation, Anno 1688, was } £.43,500,000 Sterling.  That the yearly expence of the nation was - 41,700,000
That then the yearly increase of wealth was - 1,800,000.  That the yearly Rent of the lands was about 10,000,000  Of the burgage, or houseing, about 2,000,000  Of all other hereditaments, about 1,000,000
In all 13,000,000.
That the yearly Produce of trade, arts, and labours, was about 30,500,000
In all 43,500,000.
That the number of inhabited houses being about 1,300,000, the number of families about 1,360,000, and the number of people about 5,500,000;  The People answer to 4½ per house, and 4 per family.  That the Yearly Estates, or Income, of the several families, answer, In common, to about £.32. 0. 0. per Family.  And about £.32. 0. 0. per Head.  That the yearly expence of the nation is about 7. 11. 4. per Head.  And the yearly inerease about 0. 6 8. per Head.
That the whole value of the kingdom, in \ £.650,000,000 Sterling.
Viz. The 13 millions of yearly rents, at about } 234,000,000 Sterling.
The 30 millions and a half per annum, by trade, arts, labours, &c. at near 11 years purchase, (which, being the value of the 5 millions and a half of people, at £. 60 per head), comes to
The stock of the kingdom, in money, plate, { 28,000,000.
The flock of the kingdom, in shipping, forts, ammunition, stores, foreign or home goods, wares, and provisions for trade abroad, or consumption at home, and all instruments and materials relating thereto
The live flock of the kingdom, in cattle, beafts, fowl, &cc } 25,000,000.
In all £.650,000,000 Sterling.

A CALCULATION of the Quantity of SILVER, and Gold, in England, France, and Holland, in Europe, and in the World in general, and of the Increase, and Consumption, thereof, Anno 1688.

#### This Calculation is built upon this Hypothesis:

- 1. That the filver and gold in Europe, at the discovery of the West Indies, near 200 years ago, was but 45 millions Sterling; but is new about 5 times as much, or 225 millions.
- 2. That there have been 520 millions of filver and gold imported into Europe from America, within these last 180 years: besides what has been produced in Europe, or imported into it from Asia, and Africa.

#### Whereby the Account of Europe stands thus:

```
The existing stock of silver and gold in Europe, 180 years ago
Produced in Europe within these last 180 years
Imported into Europe from Asia in manufactures
from Africa, in gold dust, &c. - - - - - - 520 Millions.

In all 590 Millions.
```

Whereof 545 millions having been produced in Europe, or imported into it, within these last 180 years; viz.

In the first eighty years - 205 millions, or £.2,560,000 per annum, And in the last hundred years 340 millions, or 3,400,000 per annum;

We may conclude, that the existing stock of silver and gold in Europe;

```
Being, 200 years ago - - - - 45 millions,
Was, - 100 years ago - - - - 100 millions,
And is at prefent - - - - 225 millions:
```

It has increased-

In the first 80 years - 55 millions, or £.700,000 per annum; In the last 100 years 125 millions, or 1,250,000 per annum;

180 millions:

So this last 100 years Europe has-

Produced and imported 340 millions, or £.3,400,000 per annum.

Increased - - - 125 millions, or 1,250,000 per annum.

Confumed and exported 215 millions, or 2,150,000 per annum.

Now, before we come to the particulars how these 215 millions, in gold and silver, have been consumed in Europe, within this last 100 years, we shall consider in what the 225 millions, which we estimate to be the prefent stock of Europe, in gold and silver, and things made thereof, do consist; viz.

	In Europe in general.	In England.	In France.	In Holland.
Coined Silver	110 Millions	£.8,500,000	£.18,000,000	£.7,000,000
Coined Gold	28 Millions	3,000,000	5,000,000	2,000,000
Bullion	8 Millions	1,000,000	1,500,000	1,500,000
Lay Plate	46 Millions	4,000,000	9,000,000	1,500,000
Church Plate	20 Millions	200,000	3,000,000	100,000
Medals and Rarities -	5 Millions	200,000	900,000	300,000
Gold & Silver Thread and Wire, and Things made thereof in wear	6 Millions	400,000	1,400,000	100,000
Do in Stock for Trade	2 Millions	200,000	600,000	300,000
	225 Millions	17,500,000	39,400,000	12,800,000

Whereupon we have estimated the consumption of the 315 millions of Gold and Silver, in Europe, within the last 100 years, which is £.3,150,000 per annum, as followeth:—

	In Europe In In In in general. England. France. Holland.
v	the wear of Silver Coin - a 1000th Part of the 110 Mills 110,000 8,500 18,000 7,000
,	The wear of Gold Coin - a 1000th Part of 28 Mills 28,000 3,000 5,000 2,000
	Waste in Coinage a 2000th Part of 2 Mills 10,000 1,250 2,500 800
	Waste in working of Plate a 150th Part of 3 Mills 20,000 1,600 4,000 700
	The wear of Wrought Plate a 800th Part of 66 Mills 82,000 4,000 12,000 1,600
	The wear of things made of Gold & Silver Thread a - 10th Part of 6 Mills 600,000 60,000 180,000 20,000 or Wire
	Leaf & Shell Gold & Silver The whole of £.50,000 50,000 6,000 20,000 3,000
	Lost in Casualties at Sea - a - 70th Part of 2 Mills 30,000 7,000 10,000 10,000
	Loft by Fires, Inunda- tions, &c a } a 4000th Part of 200 Mills 5,000 1,000 2,000 500
	Liquid Gold and Silver - The Half of £.10,000 5,000 500 1,500 200
	Buried & loft, not known a 7000th Part of - 140 Mills 20,000 2,000 5,000 500
	Exported out of Europe, }
	In all 2,150,000 334,850 420,000 346,300
	Whereby

Whereby it appears, that the two principal articles, by which the gold and filver of Europe is confumed, are, in things made of gold and filver thread and wire, and in coin, or bullion exported in trade; these two articles alone being 7 parts in 8 of the whole consumption of the gold and filver of Europe.

As to the world in general, I compute the existing stock, 180 years ago, at 500 millions.

The produce this last 180 years, 1,200 millions: The consumption, 850 millions.

The increase, 350 millions, which, added to the 500 millions, make the present stock 850 millions.

### § VII.—THE feveral forts of LAND in England, with the Value, and Product thereof.

### England and Wales contain 39 Millions of Acres; viz.

	Acres. Value per Acre. Rent.
Arable land	11,000,000 at 5s. 10d. per acre £3,200,000
Pasture and meadow -	10,000,000 at 9s per acre 4,500,000
	3,000,000 at 5s per acre 750,000
Forests, parks, and commons	3,000,000 at 3s. 6d. per acre 550,000
Heaths, moors, moun- tains, and barren lands }	10,000,000 at is per acre 500,000
Houses, and homesteads, gardens, and orchards, churches, and church-yards	The land 450,000 The buildings 2,000,000
Rivers, lakes, meres, and }	700 000 ot 00 0000
Roads, ways, and wafte }	500,000 at per acre.
In all	39,000,000 at 6s. 2d. per acre 12,000,000

_	True Yearly Value.	Value as rated to the 4s. Tax. o	
So the yearly rents, or \ value of the land is	10 millions -	6,500,000 -	1,300,000
The houses and buildings	2 millions -	1,500,000 -	300,000
All other hereditaments -	1 million -	500,000 -	100,000
Personal estates, &c	I million -	550,000 -	100,000
In all	14 millions -	9,050,000 -	1,800,000
So that, whereas the tax of	as, per pound n	produces but I	.1.800.000

It should produce (if duly affessed) - - - - - 2,800,000.

#### The PRODUCE of the Arable Land, I thus estimate:

Of	Bushels.	Per Bushel.	Value.	This is the only nett Produce
Wheat 12	Millions,	at 3s. 6d		exclusive of the Seed Corn,
Rye 8	Millions,	at 2s. 6d	- 1,000,000	which in fome Sorts of
Barley 25	Millions,	at 28	- 2,500,000	Grain, being nearly a 4th of the Produce in others, a 5th,
Oats 16	Millions,	at is. 6d	- 1,200,000	may in general be reckon-
Peas 7	Millions,	at 25. 6d	- 875,0001	ed, about 17 Millions of
Beans 4	Millions,	ät 25. 6d	- 500,000	Bushels more, which make
Vetches, &c. 1	Million,	at 28	- 100,000	the whole Produce to be go Millions of Bushels, which
73	Millions.	at 25. 3d	- 8,275,000	at 2s. 3d. per Bushel in com- mon are full 10 Mills Sterls.

These 73 millions of bushess of grain are the product of 10 of the 11 millions of acres of arable land; the other million of acres producing hemp, flax, woad, saffron, dying weeds, &c.; the value of the product whereof is about 1 million sterling. So that the rent of the corn land being under £.3,000,000 per annum, and the nett produce thereof above 8 millions, the produce is near treble to the rent.

Now the RENTS or YRARLY VALUE of the pasture and meadow, woods, coppices, forests, parks, commons, heaths, and moors, mountains and barren land, being - - - £. 6,250,000 sterling

The produce can fcarce make above two rents, or 12 millions; there being little charge either in cultivating the land, or gathering the product thereof, comparatively to what there is in the arable land.

This produce is principally in and by cattle, hay, timber, and firewood.

The produce by cattle, in butter, cheefe, and milk, is about	£. 2,500,000
The value of the wool yearly shorn is about	2,000,000
The value of the horses yearly bred is about	- 250,000
The value of the flesh yearly spent as food is about	- 3,350,000
The value of the tallow and hides of the cattle	600,000
The value of hay yearly confumed by horses about	- 1,300,000
The hay yearly confumed by other cattle,	1,000,000
The timber yearly felled for building and fuch uses,	500,000
The wood yearly spent in firing and petty uses,	500,000
	-

So the produce (including one million sterling in hay fpent by cattle) is in all,

Tame Fowl -

Wild Fowl

#### Which for 5 1/2 Millions of Peeople is-

In Value \$ 148. 3d. per Annum. In Weight  $\begin{cases} 72 \text{ lbs. 6 oz. per Annum.} \\ \begin{bmatrix} - & -3\frac{1}{6} \text{ . per Die n.} \end{cases}$ - - Id. per Deim, each.

at 6d. per lb. - - - 600,000

at 12d. per lb. - - -

But, for 2,700,000 perfons, being the number of those, who eat Flesh constantly, the foresaid proportion of 398,090,000 pounds weight of slesh yearly spent as food, comes to  $6\frac{2}{5}$  ounces per head per diem, and  $147\frac{1}{2}$  pound weight per head per annum, besides Dutch beef, Westphalia bacon, &c.

The remaining 2,800,000 persons not eating of flesh being these:

200,000 infants under 13 months old,

40,000 fick persons,

260,000 part of 700,000 persons, who seed on fish at least 2 days in 7.

1,280,000 part of 1,760,000 perfons contained in 440,000 families, who, by reason of their poverty, do not contribute to church or poor, and consequently eat not sless above 2 days in 7.

1,020,000 part of 1,200,000 perfons contained in 440,000 families who receive alms, and coniequently eat not flesh

above once a week.

2,800,000.

# § VIII.—THE BEER, ALE, and MALT annually confumed in England; and the Revenue of Excife arifing thereby.

THAT the Arable Land of England is near - - - - 11,000,000 of Acres;
Of which the Barley Land is almost a third, or - - 3,200,000 Acres;

Which, at 15 bushels per Acre, is 33 millions of bushels of Barley.

Viz.-Malted and brewed into Ale and Beer 2 1 millions of bushels.

Malted and made into Spirits, and for other uses - - - - - - 1 mill nof bushels. 22 ½ mill n malted.

Seed Corn, at near 4 bufnels per Acre  $8\frac{1}{2}$  mill<sup>n</sup> of bufnels. Barley for bread, feeding of poultry, &c.  $2\frac{1}{2}$  mill<sup>n</sup> of bufn.  $10\frac{1}{2}$  mill<sup>n</sup> unmalted

In all - - - 33 millions of bushels.

Which 22½ millions of bushels of malted Barley may well produce - - - - 224 millns of bushels of malt.

And for private use - - - - 9,500,000 bushels.

And that the difference between the years 1688 and 1695 is according to the following Scheme:

A° 1688.	Bushels Barrels of Malt. Strong. { 15,900,000 Producing 5,300,000 } Barls small. 7,100,000 Producing 7,100,000	Excifed - 4,800,000 at 2s. 6d. per barrel - £.600,000 Not excifed - 2,400,000 at 6d. per barrel - 60,000 Not excifed 4,700,000.
	23,000,000 12,400,000	£.660,000
A° 1695.	Barls ftrong.  [14,500,000 Producing 3,8 50,000]  Barls fmall.  7,500,000 Producing 7,500,000  22,000,000 - 11,350,000	Excifed - 3,200,000 at 4s. 9d. per barrel - £.766,100  Not excifed 620,000.  Excifed - 2,200,000 at 13,3d. per barrel - 137,800  Not excifed 5,300,000.
	22,000,000 - 11,550,000	8. 953,000

#### Whence it follows,

- That if the drink brewed for private use, A° 1698, had paid the then Duty of Excise, it had come to £. 180,000, and in the whole - - - -
- That if the drink brewed for private use, A° 1695, should pay the present Duty, it would come to £.1,311,850; £.408,250, and in the whole
- That raising the Excise has reduced the consumption of malt from 23 millions of bushels to 22 millions;
- That it has reduced the quantity of drink brewed from 12,400,000 barrels, to 11,350,000 barrels;
- That it has decreased public brewing from 4,800,000 barrels of strong drink, to 3,230,000 barrels; and from 2,400,000 barrels of small to 2,200,000 barrels;
- And that it hath increased private brewing from 500,000 barrels of strong to 620,000 barrels; and from 4,700,000 barrels of small to 5,300,000 barrels;
- Laftly, That 9d. per bushel on Malt, at the Kiln, is much about equivalent to the present Excise; and that 18d. per bushel on Malt, at the Mash Fatt, would come to One Million sterling.

§ IX.—A CALCULATION of the Poll Bills, and fome other Taxes, and what may be raifed by fome Commodities not yet taxed.

	·	
£. 288,300, 597,500,	THAT the Produce of the 12d Polls 1st Will. and Mary, being	
1ls ;	Though in the confumption and expence of the nation they answer to near 5,500,000 foul  As by the following Scheme:	
Quarterly Poll, 3d W. and M.	The number of people as they answered in	
3,390,000.	5,400,000	
	Viz.—Perfons receiving alms - 600,000 Their children under 16 years - 300,000	
- 310,000	Their children under 16 years - 300,000 Perfons not paying to church and 7	
- 670,000	poor (660,000)	
	Their children under 16 years - 600,000 Children under 16 of day labourers 240,000	
,	Children under 16 of servants in	
- 200,000	Children under 16, of fuch as have 4 children, or more, and are not worth £.50, (150,000 parents)  Omitted by neglect, or otherwife deficient	
(State or construction of the state of the s	So the number of those that were excused, 2,150,000

So that the neat produce is but £.119,000 per ann.
that the field produce is but
Whereas, it being granted for 7 years, and valued at £. 1,200,000 ferling, it is given for above -
at f. 1,200,000 sterling, it is given for above - 170,000 per ann.
Ff2 But,

But, whereas the premium and interest money, upon advancing such part of the sum (which the act hath given credit for) as the sund will bear, may be estimated at 12 or 13 per cent. and the collecting and other charges 5 or 6 per cent: In all, 18 or 19 per cent.

It follows, that the neat produce to the Exchequer will be but £.100,000 per annum, applicable to the discharge of principal and interest; but, if one half of the £.1,200,000 be advanced the first year upon the credit of the act, and that a fourth part of the said £,119,000, should be paid, in the first year, in light hammered money, worth only ½ths of the tale, the produce of the first year, applicable to the discharge of the principal money, will not be above £.50,000.

So that if the whole deficiency of the clipt money should, instead of f. 1,200,000, amount to f. 2,400,000, it will be about 24 years before the said duty will discharge the principal and interest, though there should be no further anticipations thereon than 5 or f. 600,000 at the first, and though the said duty should produce, by the end of the said 24 years, f. 114,000 per annum clear, applicable to the discharge of

the principal.

#### § X.—THE STATE of the NATION, Anno 1695.

THAT the prefent income of the nation is a million lefs than it was anno 1688, and is now but about
That the yearly expence is about $40\frac{1}{2}$ millions, and the taxes 5 millions.—In all $45\frac{1}{2}$ millions sterling.
That the kingdom does now yearly decrease - 3 millions sterling.
That if the war were to continue to anno 1698 inclusive:
That the yearly income will in probability \} 38\frac{\tau}{2}\$ millions sterling-
The expence - $38\frac{1}{2}$ millions. In all $42\frac{1}{2}$ millions flerling.
The yearly decrease 4 millions sterling.

#### According to the following Scheme:

		Annnal Income of the Nation.	Annual Expence of the Nation.	Ordinary Revenue of the Crown	Extraordinary Taxes actually raifed.	Annual Expense in all.	Increase or Decrease of the Nation.
Ano	1888	43,500	41,700	2,000,000		41,700,000 Ind	cr. 1,800,000
	1689	43,600	41,500	1,800,000	3,000,000	44,500,000 De	cr. 900,000
	1590	43,700	41,500	1,800,000	4,000,000	45,500,000 De	cr. 1,800,000
	1691	43,800	41,400	1,700,000	4,000.000	45,400,000 De	cr. 1,600,000
	1692	43,800	41,200	1,700,000	4,000,000	45,200,000 De	cr. 1,400,000
	1693	43,600	41,000	1,600,000	4,000,000	45,000,000 De	
	1694	43,100	40,800	1,600,000	5,000,000	45,800,000 De	cr. 2,700,000
	1695	42,500	40,500	1,500,000	5;000,000	45,500,000 Dec	cr. 3,000,000
	1696	41,600	40,100	1,500,000	4,500,000	44,600,000 De	cr. 3,000,000
	1697	40,200	39,300	1,400,000	4,500,000	43,800,000 De	
	1698	38,500	38,500	1,400,000	4,000,000	42,500,000 Dec	cr. 4,000.000

#### Hence we may infer,

That in 7 years, from 1688 to 1695 inclusive, the taxes have amounted to, effectually 29 millions steamers.	rling.
But, that the kingdom is scarce actually decreased 13 millions.	
So that, by industry, and frugality, there have 16 millions.	
That, by the year 1698, inclusive, the taxes will, in 10 years, have amounted to, in all probability, effectually 3	
And the kingdom will be actually decreased - $23\frac{1}{2}$ willions.	
T. f. a	PETER .

That, after the year 1695, the taxes actually raised will fall short every year, more and more, to that degree, that the war cannot well be sustained beyond the year 1698 upon the foot it now stands, unless—

1. The yearly income of the nation can be increased:

2. Or the yearly expence diminished:

3. Or a foreign or home credit be obtained or established:

4. Or the confederacy be enlarged: 5. Or the state of the war altered:

6. Or a general excise, in effect, introduced:

Now, whereas, by the foregoing scheme, the wealth of the kingdom seems to be actually decreased almost 13 millions sterling, between 1688 and 1695, inclusive; and will probably decrease by 1698, inclusive, above 10 millions and a half more—In all about 23 millions and a half in ten years:—The said decrease seems to be thus chargeable:

	The Stock of the Kingden 1688.		Remaining Stock, Ano	Decrease by the Year 1698.	Remaining Stock, Ano
Coined Silver	8,500,000	4,000,000	4,500,000	1,500,000	3,000,000
Coined Gold	3,000,000		3,000,000	1,500,000	1,500,000
Uncoined Silver and Gold	500,000	400,000	100,000	100,000	
Wrought Plate, Rings, &c	4,000,000	1,600,000	2,400,000	1,200,000	1,200,000
Jewels	1,500,000	500,000	1,000,000	200,000	800,000
Furniture, Apparel, &c	10,500,000	2,500,000	8,000,000	1,500,000	6,500,000
	28,000,000	9,000,000	19,000,000	6,000,000	13,000,000
Stock for Trade, Confump-	33,000,000	3,000,000	30,000,000	3,500,000	26,500,000
The Live Stock in Cattle, &c.	25,000,000	1,000,000	24,000,000	1,000,000	23,000,000
***	86,000,000	13,600,000	73,000,000	10,500,000	62,500,000

Hence it follows, that if the flock of the nation, which was 86 millions sterling anno 1688; viz. about double to the yearly income and expence, shall be decreased to 62 millions and a half by anno 1698; the war cannot well be sustained longer than that year, for these reasons:—

1. For that the money of the kingdom will then be but  $4\frac{x}{2}$  millions; viz. but one-tenth of the annual expence, lefs than which cannot circulate the whole;

2. That the wrought plate will be little above a million, confequently, nothing to be spared further from that article;

3. That 7 millions in jewels, household stuff, furniture, apparel, &c. is the least quantity we can imagine that article reduceable unto, the bedding of the kingdom amounting to one half of that sum;

4. That.

Which

That, if the flock of the kingdom, in fhipping, forts, and castles, and in naval and military stores and appointments, and for foreign trade and home consumption, and all the branches of that article, be reduced from 33 to 26 millions; if it should be further lessened the nation cannot be secure, trade cannot be carried on, nor a sufficient stock of provisions left to supply us in time of difficulty;

5. That if the live stock of the nation, which will then be diminished a 12th part, should be further diminished, it may occasion an excessive rise of the price of wool, leather, slesh, butter, and cheese, not much short of a famine, unless the number of people decrease propor-

tionably; the effect whereof will be equally pernicious.

### § XI.—The STATE of FRANCE, and HOLLAND, Anno 1688, and Anno 1695.

#### AS to the State of FRANCE, Anno 1688;

```
THAT France contains about - - - 126 millions of acres. Which at about 40 acres per family, is - 3,200,000 families.
And allowing full nine acres per head, and \left\{\begin{array}{ccc} A_1 & A_2 & A_3 & A_4 & A_5 & 
That the yearly rents of the lands and other hereditaments of France, at 5 s. per acre, is 32,000,000 sterling.
The trade and business of France - -
                                                                                                                                                                      - 52,000,000
                                                                                                                                                    In all 84,000,000 fterling.
 Which is for every head in France about - f. 6. per annum.
          OF this 86 millions income per annum in times of peace,
The taxes and revenue of the crown is about \{10^{\frac{1}{2}} \text{ millions sterling, or } \text{£.} -15\text{s. per head.} \}
           10 1 millions sterling
The confumption over and above taxes, &c. 70 millions, - - or 5 — per head.
 The yearly increase - 3\frac{\tau}{8} millions, - - or — 5s. per head.
                                                                   In all 84 millions, - - or £. 6. - per head.
     AS to the 10 1 millions sterling, for the ordinary taxes and public
The necessary charge of the government requires 7 millions sterling. The incident charge of the government - 1 ½ millions.

The yearly surplus applicable to the increase of shipping, and to naval and military stores, or to lay up in money - - - - - - - 2 millions.
                                                                                                                                                                                         10 1 millions.
```

Which yearly furplus of 2 millions is capable of raising a bank, in thips of war, in naval and military stores, and in ready money, to the value of 20 millions sterling, upon the enjoyment of 10 years peace.

Supposing, then, that the prefent war has, in 7 years, cost France 70 millions, or comms annis, 10 millions per annum—

And the whole taxes and revenue of the crown, ordinary and extraordinary, have been 17½ millions per annum, or 25s. per head per annum.

#### AS to the State of FRANCE, Anno 1695:

IT may well be presumed, that, by the inter- ruption of trade, and the desertion of the re- fugees, the income of France is lessened to millions per annum, and is now but -
That the people of France are leffened \(\frac{1}{2}\) of a million, and being now but 13,500,000 fouls, have reduced their expence about 9s. per head per annum; viz. from \(\frac{1}{2}\). 5. to \(\frac{1}{2}\). 4. 11s.; whereby the prefent yearly confumption is
That the yearly charge of the war is now in-
That the necessary charge of the government 7 millions.
The incident charges • 0 ½ million.
In all 80 millions.
So that France does now actually decrease near a 12th part of its annual income, 6 millions per annum.

#### AS to the State of HOLLAND, Anno 1688.

THAT Holland contains -- - S millions of acres. That the number of people is - - - 2,200,000 fouls. That to each foul there is in land - -3 2 acres. That the rents of the land, houses, ? and hereditaments, is 10s. per 4 millions sterling per annum. acre, or - - -That the trade and business of Hol-133 millions sterling per annum. So that the whole income of Hol- ? 173 millions sterling per annum. land is f. s. d. That the general income \\ \bar{17\frac{3}{4}}\] millions flerling, is 8 \( 1 \) 4 per head. Whereof the taxes, or pub- ? Ditto lic revenue - - -Consumption in diet, apparel, and incidental II Ditto charges, over and above ( the taxes - -Yearly increase -2 Ditto - or o 18 2 per head. Ditto or 8 1 4 per head.

#### As to the 4 3 Millions sterling public Revenue;

The ordinary Charge of the Government is, £.2,750,000 { £.3,750,000 Sterling. Interest Money for 25 Millions, at 4 per Cent. 1,000,000 } £.3,750,000 Sterling. The Incidents or Discretionray Expences - - - - - 500,000 Sterling. The yearly Surplus, applicable to the Increase of Shipping and to Naval and Military Stores, or to lay up in Money } - 500,000 Sterling. £.4,750,000 Sterling.

Supposing, then, that the present war has, in 7 years, cost Holland 22 millions, or 3,150,000 sterling per annum—

They have raifed extraordinary taxes of  $1\frac{1}{2}$  a  $\left\{10\frac{1}{2} \text{ millions.}\right\}$  In all  $22\frac{1}{2}$  millions.

#### AS to the State of HOLLAND 1695:

Supposing that the government is decreased $4\frac{\pi}{2}$ Millions sterling fince the beginning of the war to the year 1695:
Yet, confidering, that by a more than ordinary frugality in diet, apparel, and such other incident charges, as relate to the consumption of things, which amounts to about 13 millions per annum, the people may well have saved a 26th part, or $\frac{1}{2}$ a million per annum, of their ordinary expences. In all for 7 years
And that, by a more than ordinary industry and application to trade, during the war, and the great benefit they have made thereof, by the high price of all foreign commodities, especially those from India (occasioned, in great measure, by the loss of so many English East India Ships, and the difficulties which the English East India Company hath lain under of late years) they may well have advanced their profit by trade half a million per annum more: In all for 7 years
And, that out of the 2 millions yearly increase, in times of peace, the additional taxes this war having been but I ½ million per annum, there remains an increase of ½ a million per annum: In all for 7 years
It follows, that the government is decreased - $4\frac{1}{2}$ millions. Yet the people have increased $10\frac{1}{2}$ millions.
So that Holland, in general, is richer than at the beginning of the war, by - + - } 6 millions.
Allowing, then, the prefent income of Holland to be half a million per annum more £.18,250,000 fterling; than in time of peace; viz.
The ordinary charge of the government - 2,750,000 fterling; Interest of money for 25 millions sterling - 1,000,000;
The extraordinary charge of the war at a medium 3,150,000;  The yearly confumption half a million lefs than in time of peace 10,500,000;
In all £,17,400,000 sterling:
It follows, that there is yet an annual increase } - 850,000;
That is to fay, the public revenue has de-
But the people have increased communibus annis

# § XII. THE STATE and CONDITION of the Three Nations, of England, France, and Holland, compared one with another, with respect to the Years 1688 and 1695.

#### THE EXPENCE of the Three Nations in DIET', I thus Estimate:

For Anno 1695,				
,3.	England.	France.	Holland.	In all-
I. In Bread, Bread Corn, Cakes, Bifcuit, Paftry, Pudding, and all things made of meal or flour	4,300,000	J.10,600,000	£.1,400,000	£.16,300,000
z. In Beef, Mutton, Veal, Lamb, Pigs, Pork, Bacon, Kids, Venifon, Conies	3,300,000	5,600,000	800,000	10,000,000
3. In Butter, Cheese, and Milk	2,300,000	4,200,000	600,000	7,100,000
4. In Malt Drink, or Beer and Ale only	5,800,000	100,000	1,200,000	7,100,000
g. In Wine, Brandy, Spirits, and ftrong Liquors, Cyder, Perry, Mum, Mead, Metheglin, and made Wines	1,300,000	9,000,000	400,000	10,600,000
6. In Fish, Fowls, and Eggs	1,700,000	3,900,000	1,100,000	6,500,000
7. In Fruit, Roots, and Garden Stuff -	1,200,000	3,600,000	400,000	5,200,000
2. In Salt, Oil, Pickles, Spices, Grocery, and Confectionary Ware, Jellies, Sweetmeats, &c.	1,100,000	3,000-000	300,000	4,400,000
	21,000,000	38,000,000	6,200,000	65,200,000

#### Hence we may observe,

That, if England contain 5,500,000 fouls, France  $13\frac{1}{2}$  millions, and Holland 2,200,000;—then each head spends, in Diet, one with another. f.3, 1s. 4d. per annum: viz. each head, in England, f.3, 16s. 5d.—In France, f.2. 16s. 2d.—In Holland, f.2. 16s. 5d.

According to the following Scheme:

	Engla	ind:		Fran	ce:		Hol	land	:

England  France Holland	England France Holland	LASTLY,	England - France - Holland -	England - France - Holland -
<b>\$</b> 0 1 688	A. 1695		Aº 1688	Aº 1695

Hence it follows, that, from the year 1688 to 1695, England has decreased, in people, 50,000; France, 500,000; and Holland is increased 40,000.

That England is decreased, in its Income, a million; France 10 millions; but Holland is increased half a million.

That England has raifed extraordinary taxes, communibus annis, about  $4\frac{7}{2}$  millions per annum; France 7 millions per annum; Holland about a million and a half per annum.

That England has lessened its ordinary expence £.700,000 per annum; France 8 millions; Holland half a million.

Lastly, That if England decreased annually 3 millions sterling, or a 14th part of its annual income, and France 6 millions, or near a 12th part of 74 millions, the decrease of England is in proportion to the decrease of France but as 6 to 7; whereas Holland increases a 21th part.

# A COMPUTATION of the Endowed Hospitals, and Alms-Houses, in England.

#### HOSPITALS AND ALMS-HOUSES.

The four great hospitals of London, viz. Christ- church, St. Bartholomew, Bridewell, and St. Thomas, have a certain revenue in rents of about
And by fines and contingent charities, about 15,000 per ann.
Besides which, there may be, within the bills of mortality, about 100 hospitals, or endowed almshouses, of about £.200 per annum each - 2
In all 45,000 per ann.
There may be, in the rest of the cities and market towns of the kingdom, 500 other hospitals and alms-houses, of about £.140 per annum each -
There may be in the rest of the kingdom about 500 hospitals and alms-houses more, of about £.100 per annum each 5
In all 165,000 per ann.
